1. Permit parking: The Lessee issues a hangtag permit card or sticker to those customers who purchase a quarterly permit. Permits are sold in three-month increments, for example: January-February-March, April-May-June, July-August-September, and October-November-December. Permittees pay a flat rate quarterly (by the quarter, biannually, or for the year). Permittees mail payment directly to the Lessee. The Lessee shall maintain (a) a list of permit holders and the amount that each permit holder has paid for each payment period and (b) a waiting list of permit holders and (c) the date placed on the list for whom no space has yet become available.

2. Transient parking: Non-permit customers park in a numbered space and pay for a daily space by (a) approaching a pay station, (b) entering the space number of the occupied parking space, (c) paying the fee associated with the occupied parking space, and (d) receiving a printed receipt for the transaction.

3. The Lessee shall be responsible for using the capabilities of the parking revenue-control system, including reports generated by the system, if applicable, to make sure that the proper fee is collected for each vehicle parked in the Facility. The Lessee's failure to collect the proper fee for each vehicle shall entitle NJ TRANSIT to invoke any and all remedies against the Lessee for the Lessee's default of its obligations under the Contract.

VI. Revenue Collection and Deposit of Gross Receipts Duties

1. On each day, at a time that falls after most of NJ TRANSIT's customers have parked vehicles in the Facility and before they retrieve them at the end of the workday, the Lessee shall collect all parking fees from the pay-by-space meters at the Facility and safeguard them until deposit into the Parking Lot Fund Account.

2. For each day's transactions, the Lessee shall create and maintain a list showing each space for which a fee was paid and the amount paid.

3. The Lessee shall administer a parking-permit program for customers who purchase quarterly parking permits consistent with the terms and conditions that NJ TRANSIT sets forth for the purchase of such permits. On each day that the Lessee receives payment for a permit, the Lessee shall create and maintain a list showing such payment. The Lessee shall deposit all such receipts.

4. If the revenue-control system in the Facility fails, prevents or inhibits the accurate accumulation of the requested data for the financial reports listed in Exhibit D, Quarterly and Annual Reporting Requirements and General Format, the Lessee shall take immediate action to remedy the revenue-control system deficiency and shall institute comprehensive, manual revenue-control procedures to accurately document customer parking activity to meet the standards of NJ TRANSIT.

5. If any gross receipts are lost, stolen or unaccounted for, which shall include but not be limited to collection shortages, while such receipts are in the custody and control of the Lessee, the Lessee shall replace them within twenty-four (24) hours of discovery of such loss, theft, or failure to account as stipulated in Paragraph 18 of the Lease and Operating Agreement.

VII. Staffing Duties

1. The Lessee shall provide staffing in sufficient numbers to fulfill the terms and conditions of the Lease and this Scope of Services. Lessee shall make its best efforts to attract, hire, train and retain high-quality personnel and to minimize employee turnover.

2. The Lessee shall design and implement a training program for its employees that instructs and motivates them to provide excellent service to NJ TRANSIT's customers.

VIII. Maintenance of Records

1. The Lessee shall keep full and complete books of account and related records as described in Paragraph 6 of the Operating Agreement and Lease, and shall comply with the procedures that NJ TRANSIT shall prescribe. The Lessee shall process all pertinent data from the previous day's business in a prompt manner.

2. NJ TRANSIT reserves the right to inspect and audit the Lessee's books of account and other records pertaining to the Lease at all reasonable times and to make and retain copies of the information contained therein.

3. The Lessee shall not cause deterioration or destruction of any documents related to gross revenue from parking or other activities at the Agreement Premises. The Lessee shall indemnify and hold harmless NJ TRANSIT from any liability resulting from failure to retain such documents.

4. The Lessee shall not use for any financial gain or otherwise any data that it collects from, or receives about, customers of the Facility. It shall use any such data solely for operation of the Facility for NJ TRANSIT and shall use all reasonable efforts to prevent disclosure of that data to persons unauthorized to view or use that data.

IX MAINTENANCE DUTIES

A. Custodial Services

1. Maintenance services consist of the daily removal of all gum, graffiti, trash, litter, dust, leaves, dirt, mud, grease, oil and any and all other types of unclean or hazardous elements from the Agreement Premises and platforms and maintaining such areas to a clean, sanitary, and polished condition that will meet or exceed all standards in appearance and procedures in the janitorial and sanitation industries.

2. Also, the daily removal of all loose trash and litter; mopping and sanitizing of all sickness, spills, etc.; ash trays and trash receptacles emptied; drinking fountains cleaned and sanitized; cleaning all fingerprints, smears, and stains from the station parcel as necessary, clean, polish, and sanitize all wash basins, commodes, and all other restroom fixtures, furniture and appliances, including spot cleaning mirrors, walls and floors and refilling all dispensers as necessary; prompt removal of all graffiti wherever and whenever it appears.

3. Power washing on a regular as needed basis.

4. Remove and replace broken glass or mirrors.

5. Clean and disinfect all surfaces (e.g., stainless steel, bronze, tile, etc.), with industrially approved cleansers, material, equipment, chemicals and procedures and be responsible for all damages caused by improper applications, cleansers, materials, equipment and chemicals.

6. Supply and utilize new and well -kept signs to delineate hazardous areas such as "wet floor" signs, "out of service", etc.

7. During inclement weather, install safety matting as required.

8. Where and when necessary, supply and use demarcation tape to "rope off" work areas.

9. Wax or floor finish is not to be permitted to be splashed on walls, or other fixtures, and must be removed promptly if splashing, or any other over accumulation occurs, anywhere.

B. General Utility Requirements

In addition to the above Custodial Services, assistance, repair and services shall include, but not be limited to the following:

1. Repair and/or replace defective hardware.

2. Maintain, remove and replace all broken floor tiles (vinyl and quarry tile) and vinyl wall surfaces.

3. Repair and maintain all finished woodwork, including wooden doors, handrails, wood caps, shower benches and wood trim.

4. Repair damaged banisters. Refinishing of banisters shall be as required.

5. Refinish interior surfaces, as required and repaint mechanical and electrical equipment, piping and surfaces as required.

6. Repair and/or refinish terrazzo surfaces.

7. Repair and/or replace acoustical ceiling materials.

8. Repair and/or refinish the following:

All aluminum surfaces
Soffits
Covers
Trim

9. Erect barriers and rope off areas as required.

10. Maintain and repair sanitary napkin dispensers and disposal.

11. The repair of any miscellaneous concrete items such as sidewalks, concrete decks, etc. due to chipping, cracking or spalling; however, repairs to any column should be directed to NJT Stations Response Center at 1-973-491-8779 or 1-732-933-3976.

12. Maintenance and repair of all expansion joints and appurtenances, if applicable.

13. Maintenance and repair of masonry, including brick, concrete block and granite block, if part of the Agreement Premises.

14. Maintenance and repair of all miscellaneous and ornamental metal items including chain link fence, steel ladders, deck drains, aluminum louvers, grilles and panels, guard rails, corner guards, crash barriers, fascias, soffits, and skirt panels.

15. The maintenance and repair of doors, including hollow metal doors, glass entrance doors, aluminum doors and aluminum roll up doors. (See Glazing, Door Repairs & Locksmiths, Section F, for further requirements).

16. Maintenance and repair of all stairways.

17. Maintenance and repair of all waterproofing and weatherproofing items including weather stripping and miscellaneous caulking.

18. Minor resurfacing of the parking lots (including but not limited to pothole repairs).

19. Minor platform repairs will be the responsibility of Lessee and if repair is within the yellow safety line, Lessee will notify NJ TRANSIT's Stations Department by contacting NJ TRANSIT's Response Center at 1-800-835-2090, for further instructions and flag protection prior to proceeding with work.

C. Landscaping

1. Shall be provided bi-weekly between April 1 and November 15 of each year.

2. Formatively prune vegetation as required.

3. Clean up and dispose of all cuttings, loose vegetation, and all other garbage and debris.

4. All undesirable vegetation must be removed and the areas of growth treated, including cracks in stairs and pavements.

5. Treat all resulting and existing stumps and undesirable vegetation with herbicide as required.

6. Fertilize all trees and shrubs as required.

7. Replenish mulch as required.

D. Snow Removal

1. Monitor conditions as they develop and respond accordingly.

2. Clear snow and ice from all portions of the Agreement Premises and Parking Facility, including all entrances, driveways, curbs, curb cuts, steps, ramps, sidewalks, and pay-by-space equipment and dispose of the ice and snow in a manner that NJ TRANSIT approves so as to assure the continual availability of all parking spaces and pedestrian walkways and to avoid risk of injuries to persons or damage to property.

3. Removal of snow and ice from the Agreement Premises and Parking Facility shall occur as follows:

(a) In connection with overnight and early morning snowfalls, NJ TRANSIT seeks to ensure that its parking facilities, sidewalks, platforms and stairs are free of snow and no later than a half -hour prior to the arrival of the first train in the morning.

(b) In connection with daytime snowfalls, NJ TRANSIT seeks to ensure that its parking facilities are kept free of snow and ice in a manner that enables homeward commuters to depart from the parking facility earlier than they otherwise might leave the facility.

(c) Pre-salting and sanding as an activity separate from the removal of snow.

(d) The application of de-icing compound concurrent with the clearing of snow. The de-icing compound will consist of concrete sand (40 parts), rock salt (39 parts), and flaked calcium chloride (1 part), unless directed otherwise by Lessor.

(e) The spot clearing of snow and drifts, or the removal of ice patches, concurrent with the spot application of a de-icing compound as needed.

(f) The removal of the de-icing compound from all stations and facilities.

(g) Cleared snow or ice must not be deposited on train right-of-way.

(h) Platform snow will be the responsibility of NJ TRANSIT. Lessee will contact NJ TRANSIT's Stations Department by contacting NJ TRANSIT's Response Center 1-800-835-2090.

E. Electrical Services

1. Inspect station lights past twilight (i.e., platform, restroom, and parking lot lights) once a month. Clean covers, repair or replace light fixtures, covers and bulbs as needed.

2. Repair or replace light fixtures and bulbs in between monthly checks as required.

3. Repair or replace hand dryers in restrooms as needed.

4. Reset light timers as needed.

F. Glazing, Door Repairs and Locksmith Services

1. Remove and replace broken glass and mirrors as soon as possible but no later than 10 days.

2. Repair and/or replace door check/closures.

3. Repair and/or replace door hardware, hinges, etc.

4. Apply push-pull signs as needed.

5. Install doors if needed.

6. Repair locks, provide keyed alike locks where needed and make keys as required.

G. Painting Services

1. Paint previously prepared surfaces at any station to include but not limited to: wooden benches, station building, walls, ceilings, tunnels, railing, etc. as needed.

2. Scrape, sand and/or water blast and prime surfaces before painting.

3. Painting of the yellow safety line is the responsibility of NJ TRANSIT.

4. Repaint painted lines and parking space numbers as needed.

EXHIBIT C

REQUIRED SUBLEASE CONTRACT CLAUSES

All subleases or assignments entered into by Lessee shall include proper safeguards to protect the rights and privileges of all parties concerned and shall include all of the provisions required by the terms of the Agreement and all of the following provisions:

1. All subleases or assignments shall stipulate Lessor's continuing right to entry to the Demised Premises, its right to be notified of and to approve or reject all structural modifications, erection of billboards, signage or other advertising materials and any modifications to existing commuter-related facilities, and shall provide for ownership of all permanent improvements made to the structure by the assignee or sublessee, or by Lessee for the assignee or sublessee.

2. Lessor, its subsidiaries, or any other operating authority Lessor may designate, must be allowed all rights to perform those improvements or institute those standards required for safe and efficient transportation operation.

3. Lessor shall reserve the right to inspect any assigned or subleased premises during normal working hours.

4. Lessor shall reserve the right to approve or reject all construction plans of the sublessee whether internal or external to the premises. Lessor shall have the right to audit and inspect all documents and records regarding the construction and/or improvements on or to the Demised Premises by any assignee or sublessee. Accordingly, such documents must be retained by assignee or sublessee for three years.

5. Lessor shall have the right to enforce all terms of the assignment or sublease.

6. All subleases shall be for a minimum of two years unless a shorter term has been approved in writing by Lessor or unless the two year term shall be more than the balance of the term under this Agreement.

7. Assignees or sublessees shall be required to provide for general liability insurance for the assigned or subleased space and will indemnify and hold harmless Lessee as well as Lessor, its subsidiaries, or any other operating authority it may designate, and their agents and successors.

8. Assignees and sublessees shall be required to provide "All Risk" property damage insurance for the Demised Premises.

9. Assignees and sublessees shall agree to make no claims against Lessee, Lessor, its

subsidiaries, or any operating authorities Lessor may designate or their authorized agents for or on account of any loss or damage sustained by fire, wind or water coming into or being on the Agreement Premises.

10. **(a)** With respect to Lessor's termination rights set forth in Paragraph 12 of the Agreement, Lessor must have the right to terminate all assignments and subleases in effect under the same terms and conditions which apply to Lessee.

(b) Assignments and subleases must include termination clauses which permit Lessee to cancel them for cause upon no more than thirty (30) days written notice. Such specified notice period shall also apply if Lessor cancels or terminates the Agreement and by that action cancels or terminates the sublease.

11. Assignees or Sublessees shall undertake full responsibility to operate the assigned or subleased premises in a neat, clean and orderly manner.

12. There shall be no further assignment, subletting, transfer or other encumbrance of an assignee's or sublessee's interest without the prior written consent of Lessor, which may be denied at Lessor's sole discretion.

13. The sublessee, or assignee, and Lessee shall stipulate which party shall contract for and be responsible for trash and garbage removal and janitorial and other maintenance service.

14. If an assignee or sublessee should wish to make Alterations (as defined in the Agreement) to the Demised Premises, the assignee or sublessee shall submit to Lessee and Lessor a listing with all such proposed Alterations and the cost thereof. The Alterations shall then be reviewed by Lessor to determine whether same shall be allowed and, if so, to determine whether the Alterations are to be considered permanent and shall become the property of Lessor.

15. If an assignee or sublessee requires any Alterations to accommodate its use or requires advertising material to be erected, a bond shall be required equal to the amount of money needed to restore the premises to its original condition.

16. Nothing in an assignment or sublease shall be contrary to the conditions set forth in the Agreement; the assignment or sublease shall state that if there are any inconsistencies in the provisions of the assignment or sublease and the Agreement, the Agreement shall govern.

17. All Federal or State laws, rules and regulations applicable to Lessor-owned facilities because of public ownership of the facility, its use as a transportation location or as a result of construction of improvements with federal or State funds, shall also, where appropriate,

apply to any assignee or sublessee.

18. All assignments and subleases shall contain provisions of N.J.S.A. 10:2-1 through 10:2-4 and N.J.S.A.10:5-31, et seq. concerning nondiscrimination which shall be binding on all parties.

19. All assignments and subleases shall have a provision allowing Lessor and Lessee the right to audit, inspect, and review all financial records of the assignee and/or sublessee that in any way relate to the subleased space; accordingly all assignees or sublessees shall keep the records for three years.

EXHIBIT D

QUARTERLY AND ANNUAL REPORTING REQUIREMENTS

AND GENERAL FORMAT

Lessee shall submit quarterly and annual financial reports to Lessor. The financial report format is set forth hereafter. The quarterly and annual financial report submittals will be accompanied by the transaction reports (daily and permit) called for in Sections VI.2 and VI.3 in the Scope of Services. Quarterly and annual reports shall be submitted by the first day of the second month following the end of each period. *Note: revenues derived from subleases and permits for space in the station building are not included as gross revenue for purposes of this Agreement.

STATEMENT OF REVENUES FOR THE QUARTER ENDING 3/31, 6/30, 9/30 or 12/31

Gross Revenue
- Parking Permits
- Daily Parking
- Other (e.g., subtenant rent*)
- **Total Gross Revenue**

Gross Revenue Share

RE : Classification Exception Area (CEA) Biennial Certification Due
Former Allied Building Supply Co
Currently NJ Transit Rail Station - Linden
101 Elizabeth Ave
Linden, NJ 07036
SRP PI# 012948
Activity # PFR000001 - 012948

Dear Mr. Horne:

Based upon further research and a site inspection of the above referenced facility conducted on July 17, 2009, which were activities in follow-up to the New Jersey Department of Environmental Protection (Department)'s previous attempts to contact the proper responsible person in correspondences dated March 21, 2007, February 8, 2008, March 24, 2009, the Department has determined that you are a person responsible for continuing obligations related to the remediation of the above referenced site. Note that the original site has been developed as a commuter parking lot. For contaminated sites where the remedy includes leaving ground water contamination at levels that exceed the applicable Ground Water Quality Standards in conjunction with the establishment of a Classification Exception Area (CEA), the remedy must be monitored and a Biennial Certification Monitoring Report must be submitted to the Department every 2 years from the date that the CEA was established. Parties responsible for this obligation are specified at N.J.A.C. 7:26E-8.4(a)1 and 2, and include the party who conducted the remediation as well as subsequent owners and operators.

Recall that a Biennial Certification to confirm the protectiveness of the remedy pursuant to N.J.A.C. 7:26E-8.6(c) is overdue and you are required to submit it **within 90 days of your receipt of this letter**. Failure to evaluate site conditions and submit this biennial certification is a violation, subject to penalty assessment in accordance with subchapter 10 of the Department Oversight of the Remediation of Contaminated Sites (Oversight Rules), N.J.A.C. 7:26C.

The Biennial Certification form and directions for completing and submitting the biennial certification can be found on the Department's website at http://www.nj.gov/dep/srp/forms/. The website also contains links to the Technical Requirements (including N.J.A.C. 7:26E-8) and the Oversight Rules, which contain information regarding penalties. Completed Biennial Certifications shall be submitted within **90 days** to:

New Jersey Department of Environmental Protection

Bureau of Operation Maint & Monitoring
401 East State Street , P.O. Box 413
Trenton, NJ 08625-0413
Attn: Robert Soboleski, Bureau Chief

Please be advised, for the purposes of compliance with N.J.A.C. 7:26E-8.6(a)2.i and ii only, regarding the requirement to review the New Jersey Statewide Water Supply Plan, the Department has determined that, relative to the purpose of this section, there are no significant changes in the 25 year ground water use planning horizon for the State's aquifers. Therefore, persons responsible for Biennial Certifications for Classification Exception Areas do not need to review the New Jersey Water Supply Master Plan. However, the local municipality and/or county governments, and water purveyors should be contacted regarding any changes that have occurred or may be planned.

Well searches are also required as part of the evaluation pursuant to N.J.A.C. 7:26E-8.6(a)3. However, the Department is experiencing a delay in the processing of well search requests made through the Bureau of Water System and Well Permitting. In an effort to reduce the number of requests, the Department has developed a web-based tool that identifies new well permits in a given area. This tool is available at http://www.nj.gov/dep/srp/guidance/ceacompliance/, and is an acceptable means of meeting your requirements outlined in N.J.A.C. 7:26E-8.6(a)3. If you prefer to satisfy the well search requirements using the traditional means, information regarding Department's well searches may be found in the Division of Water Supply's website at http://www.nj.gov/dep/watersupply under "forms" and "well permitting."

Please note, persons responsible for meeting the monitoring and reporting requirements identified above, as defined pursuant to N.J.A.C. 7:26E-8.4(a), should notify the Department if they are relinquishing the obligation for these requirements and identify the person who is assuming the obligation. Names, addresses and telephone numbers of the relinquishing and assuming parties should be reported to the Department at the address identified above for submittal of the Biennial Certification.

In addition, please note the Department will not consider the Biennial Certification submittal complete without the $375 fee in accordance with N.J.A.C. 7:26C-9.2(a).

Lastly, please note that since the expiration date for the Classification Exception Area has already passed, the person responsible for submitting the Biennial Certification should propose in Section 6 entitled 'CEA Status' the intent to assess the current ground water quality by complying with N.J.A.C. 7:26E-8.6(a)7, by collecting at least two rounds of ground water samples such that the time between sampling events shall account for seasonal fluctuations in the ground water table and the number of ground water samples collected are representative of the entire horizontal and vertical extent of the ground water classification exception area.

If you require copies of Department Guidance Documents or applications, many of these are available on the internet http://www.state.nj.us/dep/srp. If you have any questions regarding this matter contact Donald Kakas, Case Manager at (609) 633-2279 prior to the date indicated.

Sincerely,

Donald Kakas for
Robert Soboleski, Bureau Chief

EXECUTIVE SUMMARY

On behalf of the New Jersey Transit Corporation (NJ TRANSIT), Dewberry Engineers Inc. (Dewberry) has prepared this Remedial Investigation Report (RIR) summarizing the groundwater sampling-related remedial activities and results at the former Allied Building Supply Co. site, located at 101 West Elizabeth Avenue, Linden, Union County, New Jersey. The site is the current location of the NJ TRANSIT Linden Station Parking Lot 2. The New Jersey Department of Environmental Protection (NJDEP) Site Remediation Program (SRP) Program Interest Number for this site is 012948, and the Case Number is 93-06-24-1425. The Licensed Site Remediation Professional (LSRP) of Record for the site is Mr. John Q. Robinson, Jr., LSRP Number 748586, of Dewberry.

The former Allied Building Supply Co. site was previously used as a building supply yard and has been the subject of remediation and on-going groundwater monitoring since 1993, when a release of gasoline was discovered during the removal of a 2,000-gallon leaded gasoline underground storage tank (UST), Area of Concern-1 (AOC-1). Petroleum-impacted soils were removed during the UST closure activities, and the results of post-excavation soil samples were in compliance with the NJDEP cleanup levels in effect at that time. Six monitoring wells were installed and sampled, and the results indicated the presence of petroleum-related benzene, toluene, ethylbenzene, and total xylenes (BTEX) in groundwater at concentrations greater than their respective NJDEP Class II-A Ground Water Quality Standards (GWQS). A property-wide Classification Exception Area (CEA), based on a monitored natural attenuation (MNA) remedial strategy, was established for BTEX in 1998. The NJDEP issued a letter of No Further Action NFA-A (Limited Restricted Use) for the AOC-1 UST in 1998. The site was acquired by NJ TRANSIT in 2000 and converted into Linden Station Parking Lot 2. A Biennial Certification Monitoring Report for the CEA was submitted to the NJDEP in 2009 and approved by the Department in 2010.

The objective of this investigation is to complete the remedial activities associated with the site and for the LSRP to issue an unrestricted AOC-specific Response Action Outcome (RAO) for the AOC-1 groundwater. The groundwater sampling program implemented in 2022 was conducted to assess if BTEX contaminants are still present in groundwater at and surrounding AOC-1 at concentrations greater than the NJDEP Class II-A GWQS.

On April 14, 2022, Dewberry's drilling subcontractor, Subsurface Environmental Technologies, LLC, conducted a geophysical survey at and surrounding AOC-1 at the site. The geophysical work was designed to both identify the presence or absence of the former permanent monitoring wells located beneath the asphalt-paved parking lot and screen the proposed drilling locations for potential underground utility conflicts. Based on the results of the geophysical survey, none of the locations of six former monitoring wells were identified. In addition, the proposed drilling locations were cleared for the presence of subsurface utilities.

Four temporary well points were installed, developed, and sampled for BTEX on April 14, 2022. The temporary well points were installed at the location of three former permanent wells (MW-2, MW-5, MW-6), and a new location upgradient of MW-1 surrounding the former UST source area (AOC-1). The analytical results indicated that there were no BTEX compounds detected in the temporary well points. A monitoring well, MW-1R, was also installed and developed on April 14, 2022 to assess groundwater conditions and quality at AOC-1. Two rounds of groundwater samples were collected from this well for BTEX analysis: the first on April 28, 2022 (which was during the time of the seasonal high water level at the site) and the second on July 6, 2022. The analytical results from both sampling events indicated that the BTEX compounds

detected in the groundwater samples were below the NJDEP Class II-A GWQS. Based on these findings, the groundwater remedy of natural attenuation was successful and remediation of residual benzene in the groundwater associated with AOC-1 is complete. Therefore, the NJDEP should remove the CEA from the site, and the LSRP of Record will issue an unrestricted use Response Action Outcome (RAO) for the AOC.

1.0 INTRODUCTION

1.1 General

On behalf of the New Jersey Transit Corporation (NJ TRANSIT), Dewberry Engineers Inc. (Dewberry) has prepared this Remedial Investigation Report (RIR) summarizing the remedial activities and results at the former Allied Building Supply Co. site, located at 101 West Elizabeth Avenue, Linden, Union County, New Jersey. The site is the current location of the NJ TRANSIT Linden Station Parking Lot 2. The New Jersey Department of Environmental Protection (NJDEP) Site Remediation Program (SRP) Program Interest Number for this site is 012948, and the Case Number is 93-06-24-1425. The Licensed Site Remediation Professional (LSRP) of Record for the site is Mr. John Q. Robinson, Jr., LSRP Number 748586, of Dewberry.

The objective of this remedial investigation (RI) is to complete the groundwater-related remedial activities associated with the site and for the LSRP to issue an unrestricted AOC-specific Response Action Outcome (RAO) for Area of Concern-1 (AOC-1) groundwater. AOC-1 is a former [previously remediated] underground storage tank (UST) AOC. The groundwater sampling program implemented in 2022 was conducted to assess if BTEX contaminants are still present in groundwater at and surrounding AOC-1 at concentrations greater than the NJDEP Class II-A GWQS.

The RI activities discussed in this report were completed in accordance with the Site Remediation Reform Act (SRRA), New Jersey Statutes Annotated (N.J.S.A.) 58:10C-1 et seq.; the Administrative Requirements for the Remediation of Contaminated Sites (ARRCS), New Jersey Administrative Code (N.J.A.C.) 7:26C; and Technical Requirements for Site Remediation (TRSR), N.J.A.C. 7:26E.

The sampling work was performed by Dewberry in accordance with the NJDEP Field Sampling Procedures Manual (August 2005; Last Updated April 2011) and implemented in accordance with a Dewberry Health and Safety Plan (HASP) and Quality Assurance Project Plan (QAPP). The QAPP is provided in **Appendix A**.

1.2 Environmental History

The former Allied Building Supply Co. site was previously used as a building supply yard and has been the subject of remediation and on-going groundwater monitoring since 1993 when a release of gasoline was discovered during the removal of a 2,000-gallon leaded gasoline UST, AOC-1. Petroleum-impacted soils were removed during the UST closure activities, and the results of post-excavation soil samples were in compliance with the NJDEP cleanup levels in effect at that time. Six monitoring wells were installed and sampled, and the results indicated the presence of petroleum-related benzene, toluene, ethylbenzene, and total xylenes (BTEX) in groundwater at concentrations greater than their respective NJDEP Class II-A Ground Water Quality Standards (GWQS). A property-wide Classification Exception Area (CEA), based on a monitored natural attenuation (MNA) remedial strategy, was established for BTEX in 1998. The NJDEP issued a letter of No Further Action NFA-A (Limited Restricted Use) for the AOC-1 UST in 1998. The site was acquired by NJ TRANSIT in 2000 and converted into Linden Station Parking Lot 2. A Biennial Certification Monitoring Report for the CEA was submitted to the NJDEP in 2009 and approved by the Department in 2010.

2.0 PHYSICAL SETTING

2.1 Site Description

The site is the former Allied Building Supply Co. property. It is currently used as a parking lot for NJ TRANSIT commuters and consists of an asphalt-paved parking lot with several landscaped, grassy islands.

The site is located on West Elizabeth Avenue in the City of Linden. **Figure 1** shows the site location on a U.S. Geological Survey (USGS) topographic quadrangle map. The property is 2.8 acres in size and is identified as Block 254, Lot 10 in the New Jersey State and Union County tax records. The site is bordered to the northeast by another parking lot, to the southeast by parking and the elevated railroad tracks (NJ TRANSIT's Northeast Corridor), to the northwest by West Elizabeth Avenue and primarily commercial development, and to the southwest by a building under construction, which appears to be residential development. **Figure 2** presents an aerial photograph showing the location of the site and surrounding land use.

2.2 Geology and Hydrogeology

The site is located in the Piedmont Physiographic Province of New Jersey. The Piedmont Physiographic Province is underlain by slightly folded and faulted sedimentary rocks of Triassic and Jurassic age. The Piedmont is chiefly a low-rolling plain divided by a series of higher ridges. The shallow geology in the vicinity of the site consists of predominantly fill material overlying continuous glacial till of late Wisconsinian glaciofluvial deposits. The till consists of silty sand to sandy material.

According to the U.S. Department of Agriculture (USDA) Natural Resources Conservation Service (NRCS) custom Soil Resource Report for Union County, New Jersey, the shallow soil at the site and to the north has been classified as Urban land (UR), non-native fill material covered by pavement, concrete, buildings, and other structures.

Groundwater at the site reportedly occurs greater than 6 feet below ground surface (bgs) (NRCS Custom Web Soil Survey, 2015). A Conceptual Site Model is presented as **Figure 3**.

2.1 Drainage and Topography

The surface elevation of the site is approximately 20 feet above mean sea level, based on the 2014 USGS 7.5-minute topographic map of the Roselle quadrangle. The site is currently covered with asphalt and/or concrete pavement, as well as isolated manicured grassy islands. Stormwater surface runoff either percolates into the soil or flows overland to storm drains from the southwestern site boundary generally southwest towards Morse's Creek.

2.2 Surface Water Bodies and Wetlands

Morse's Creek flows from northwest to southeast and is located to the southwest of Lot 2 (Figure 1). No wetlands exist at or near the site.

2.3 Land Use and Development

Off-site land uses proximal to the site are generally residential (to the southeast across the railroad tracks) and commercial (to the southwest and to the southeast across Elizabeth Avenue). New Jersey State Route 9 is the main road that passes northeast-southwest through the City of Linden, approximately one-half mile southeast of the site. Elizabeth Avenue, also running northeast-southwest, is the main street adjacent to the northwest of the railroad tracks. NJ TRANSIT's rail lines run northeast-southwest paralleling Elizabeth Avenue through Linden and then extend further to the northwest and southeast.

The site is primarily covered by asphalt pavement/concrete and railroad tracks and has no naturally vegetated areas. Various small businesses and townhouses are located along Elizabeth Avenue. A building under construction is located directly adjacent to the southwest of Lot 2.

3.0 PREVIOUS UST CLOSURE AND SITE ASSESSMENT

In 1993, a release/discharge of gasoline was discovered at the site during the removal of a 2,000-gallon leaded gasoline UST by the former property owner (Allied Building Supply Co.). The UST was removed in accordance with a 1993 Underground Storage Tank Closure Plan. Approximately 70 tons of petroleum-impacted soils were excavated and removed during the UST closure activities. The analytical results of post-excavation soil samples were in compliance with the NJDEP cleanup levels in effect at that time, with the exception of two soil samples that exceeded the Impact-to-Ground Water Soil Cleanup Criteria (IGWSCC) for total xylenes. A second round of soil sampling conducted in 1994 at the locations of the total xylene IGWSCC exceedances indicated that all concentrations were below the applicable levels. This area of concern was designated at the time as AOC-1.

A groundwater monitoring program was implemented and six monitoring wells were installed and sampled between 1994 and 1996. The analytical results indicated the presence of petroleum-related BTEX in groundwater only in MW-1 (located at the former UST source area) at concentrations greater than their respective NJDEP Class II-A GWQS. The NJDEP issued a letter of Limited Restricted Use, NFA for AOC-1 in 1998, conditional on the establishment of a groundwater CEA. The CEA proposal was submitted to and approved by the NJDEP in 1998 for BTEX. The CEA boundary was established at the Lot 2 property line. The property was subsequently purchased by NJ TRANSIT, and the site was converted into an asphalt-paved commuter parking lot for the adjacent NJ TRANSIT Linden Station. Prior to this investigation, no additional groundwater sampling had been conducted since establishment of the CEA. A CEA Biennial Certification was submitted to the NJDEP in 2009 and approved by the Department in 2010.

A request for information regarding the six monitoring wells was submitted by Dewberry to the NJDEP Bureau of Well Permitting on August 11, 2022. The NJDEP responded and provided monitoring well records and well abandonment reports for five of the six former monitoring wells. There was no information available regarding well MW-1 at the site.

The UST-related historical documents for AOC-1 are presented in **Appendix B**.

4.0 REMEDIAL INVESTIGATION OBJECTIVE

The objective of the RI-related groundwater sampling program executed by Dewberry is to assess if BTEX contaminants remain present in groundwater at AOC-1 at concentrations above the NJDEP Class II-A GWQS. Compliance with RI requirements in the NJDEP TRSR, N.J.A.C. 7:26E, and associated deadlines were achieved through implementation of the following scope of work:

- Use of geophysics tools to identify the presence of underground utilities and the locations of six former monitoring wells at and around AOC-1;
- Installation and sampling of four temporary well points for BTEX to assess groundwater quality at and around AOC-1;
- Comparison of the temporary well point analytical results with the NJDEP Class II-A GWQS;
- Installation of monitoring well MW-1R within the AOC-1 former UST source area;
- Collection of two rounds of groundwater samples for BTEX analysis from well MW-1R;
- Comparison of the well MW-1R analytical results with the NJDEP Class II-A GWQS; and
- Preparation of a RIR for groundwater.

4.1 Remediation Standards

The applicable remediation standards for groundwater at this site are the NJDEP Class II-A Ground Water Quality Standards (GWQS). All groundwater samples collected during the RI field sampling program will compared against the GWQS.

5.0 REMEDIAL INVESTIGATION SUMMARY

5.1 Geophysical Survey

Prior to conducting fieldwork, a site-specific HASP was prepared and a site reconnaissance was conducted to inspect access for the drilling rig and to mark out the proposed temporary well point and monitoring well locations.

On April 14, 2022, a geophysical survey was conducted by Subsurface Environmental Technologies, LLC (SET) of Bordentown, New Jersey at the proposed groundwater sampling locations. The geophysical survey was designed to both identify the presence or absence of the former permanent monitoring wells located at the site and to screen the proposed drilling locations for underground utilities. The geophysical survey consisted of the collection of electromagnetic (EM) metal detection data throughout the accessible portions of the investigation area along parallel transects located 5 feet apart. Ground penetrating radar (GPR), metal detection, and magnetometry data was collected over the former and proposed well locations. Line tracing data was also collected in an effort to detect buried utilities. The findings of the geophysical survey indicated that, although two subsurface metallic anomalies were detected, none of the six former monitoring wells were located, and the proposed drilling locations were cleared for the presence of subsurface utilities (**Appendix C**).

5.2 Temporary Well Point Installation/Sampling

Prior to conducting the investigation activities at AOC-1, Dewberry prepared a site-specific HASP and, prior to mobilization, Dewberry's drilling subcontractor, SET, contacted the New Jersey "One-Call" Notification System to identify and mark out underground utilities at the site.

On April 14, 2022, SET (a New Jersey-licensed well driller) installed and developed four temporary well points at and surrounding AOC-1. The temporary well points were installed at the location of three former permanent monitoring wells (MW-2, MW-5, MW-6) and a new location directly upgradient of former monitoring well MW-1 (**Figure 4**). SET utilized SoftDig to a depth of 5 feet below ground surface (bgs) at the drilling locations to avoid damaging subsurface utilities. A Dewberry field geologist oversaw and documented the field activities.

The temporary well points were constructed with 1-inch diameter polyvinyl chloride (PVC) riser and pre-packed PVC well screens and installed to depths of 15 feet bgs, with the exception of well point TWP-3 that was installed to a depth of 28 feet bgs. The temporary well point construction diagrams are provided in **Appendix D**.

The temporary well points were gauged for fluid levels using a decontaminated water level indicator to the nearest 0.01 foot. The well points were developed after installation using disposal bailers. Investigation-derived waste (IDW), such as soil cuttings and purged groundwater, was containerized separately in appropriately labeled 55-gallon drums, for subsequent off-site disposal by NJ TRANSIT. The drums were temporarily staged on-site and later transported to Veolia Environmental Services in Flanders, New Jersey, a permitted facility.

Dewberry sampled the temporary well points on April 14, 2022 (same day as installation). A total of four groundwater samples were collected into appropriate laboratory glassware, labeled, and secured in an ice-filled cooler for transport to the laboratory. The groundwater samples and quality assurance samples including a blind duplicate (Dup_4-14-22), a field blank (FB_4-14-22), and a trip blank, were submitted to Hampton-Clarke, Inc. (HCI) of Fairfield, New Jersey, a NJDEP-certified laboratory (NELAC/NJ No. 07071), for BTEX (benzene, toluene, ethylbenzene, and total xylenes) analysis via United States Environmental Protection Agency (USEPA) SW-846 Method 8260B.

5.3 Monitoring Well Installation/Sampling

Under Dewberry observation, SET installed monitoring well MW-1R on April 14, 2022 in approximately the same location as former monitoring well MW-1 (**Figure 4**). The monitoring well was constructed with 2-inch diameter PVC well screen and riser and installed to a depth of 15 feet bgs. Sand was used to fill the annular space to a depth of approximately 1 to 2 feet above the top of the well screen, followed by a 2-foot thick bentonite seal. The remainder of the annular space was filled with a cement-bentonite grout. The surface of the well was completed with a flush mount protective casing and steel manway/cover.

Well development was conducted on the day of well installation using a peristaltic pump. Approximately 35 gallons were purged from the well during development. The monitoring well was surveyed for location and vertically to the nearest 0.01 foot and was gauged for fluid levels via a decontaminated water level indicator.

IDW associated with the installation of the monitoring well, such as soil cuttings and purged groundwater, was containerized separately in appropriately labeled 55-gallon drums for subsequent off-site disposal by

NJ TRANSIT. The drums were temporarily staged on-site and later transported to the Veolia Environmental Services facility in Flanders, New Jersey.

Monitoring well MW-1R was gauged, purged, and sampled on April 28, 2022 (initial event) and July 6, 2022 (confirmation event). Each groundwater sample was collected using a dedicated bailer. The water level at the time of sampling during the April sampling event was 9.28 feet below the top of the inner well casing (elevation 18.95 feet using the North American Vertical Datum 1988 [NAVD88]). The water level at the time of sampling during the July sampling event was 9.80 feet below the top of the inner well casing (elevation 19.12 feet using the North American Vertical Datum 1988 [NAVD88]). The monitoring well was purged utilizing a submersible whale pump. Purge water during each sampling event was monitored using a U-52 Horiba multi-meter for the parameters: temperature; pH; specific conductance; oxygen reduction potential; dissolved oxygen; and turbidity. The Field Sampling Data Sheets are presented in **Appendix E**.

The groundwater samples collected on April 28 and July 6, 2022 were placed into appropriate laboratory glassware, labeled, and secured in ice-filled coolers for transport to the laboratory. The groundwater samples and quality assurance samples, including blind duplicates (Dup_4-28-22 and Dup_7-6-22), field blanks (FB_4-28-22 and FB_7-6-22), and trip blanks, were submitted to HCI, a NJDEP-certified laboratory (NELAC/NJ No. 07071), for BTEX analysis via United States Environmental Protection Agency (USEPA) SW-846 Method 8260B.

Table 1 presents the Groundwater Sampling and Analysis Program Summary.

5.4 Groundwater Sample Analytical Results

The groundwater samples collected from the temporary well points were analyzed for BTEX. No BTEX compounds were detected in the groundwater samples, including the duplicate sample. The field blank and trip blank were also non-detect for BTEX. The temporary well point sample analytical results are presented in **Table 2**.

The groundwater samples collected from monitoring well MW-1R during the two rounds of sampling in April and July 2022 were also analyzed for BTEX. Benzene and toluene were not detected in the groundwater samples, including the duplicate samples, in either sampling round. Ethylbenzene and total xylenes were detected in the groundwater samples, including the duplicate samples, in both sampling rounds at levels below the NJDEP Class-II-A GWQS for these two compounds. In addition, the field blanks and trip blanks were non-detect for BTEX. The monitoring well sample analytical results are presented in **Table 3**.

The laboratory analytical data reports are provided in **Appendix F**.

5.5 Analytical Data Reliability

The laboratory analytical data for the groundwater sampling events were provided by the NJDEP-certified laboratory. In all cases, these analytical data met the Quality Assurance/Quality Control metrics used to evaluate reliable analytical data. Analysis of benzene during the April 2022 sampling event was complicated by the presence of total xylenes which caused interference and raised the detection limit above 1 ug/L. This issue was resolved as documented in Appendix F. The LSRP of Record (John Robinson) reviewed the analytical results and did not identify instances where the reporting limits (RLs) exceeded the applicable remediation standards. The Electronic Data Deliverables (EDDs) were submitted to the NJDEP and the submission confirmatory email is included in **Appendix G**.

6.0 RECEPTOR EVALUATION

The initial Receptor Evaluation was submitted to the NJDEP on July 18, 2011. In accordance with N.J.A.C 7:26E-1.12(d), an updated Receptor Evaluation was not prepared because:

- A new AOC was not identified,
- A new receptor was not identified; and
- A new expose pathway was not identified.

6.1 Ecological Evaluation

An ecological evaluation is conducted on a site where co-occurrence of the following exists:

1) Environmentally sensitive natural resources (ESNRs): According to the NJDEP Ecological Evaluation Technical Guidance, August 2018, ESNRs are habitats where concern for plant and wildlife exposure to site Contaminants of Potential Ecological Concern (COPECs) is paramount and also includes man-made features, such as ditches, waste lagoons, and impoundments;
2) Presence of COPECs at the AOC and in the ESNR habitat; and
3) The presence of a contaminant migration pathway.

There are no ESNRs located in close proximity (within 200 feet) of the site. The COPECs for AOC-1 was petroleum-based BTEX. The groundwater sample collected indicated that all contaminants of concern were either not detected or detected at concentrations below the NJDEP Class II-A GWQS. Therefore, no further ecological evaluation is required for the site.

7.0 CONCLUSION

Groundwater investigation activities were conducted at AOC-1 during the first three quarters of 2022. Four temporary well points were installed, developed, and sampled for BTEX on April 14, 2022. The results of the investigation indicated that there were no BTEX compounds detected in any of the temporary well point groundwater samples, the duplicate samples, the field blanks, or the trip blanks.

A geophysical survey was conducted in an attempt to locate six former monitoring wells MW-1, MW-2, MW-3, MW-4, MW-5, and MW-6. Two magnetic anomalies were detected in the vicinity of two of the wells but conclusive evidence of the presence of the former monitoring wells was not identified. Administrative well abandonment records for the former monitoring wells are presented in **Appendix H**.

Monitoring well MW-1R was situated within the former UST source area (AOC-1). Therefore, the groundwater sampling performed by Dewberry met the NJDEP's requirements of biasing groundwater sampling to the suspected location of greatest concentration. Well MW-1R was installed and sampled for BTEX on April 28, 2022 and sampled again on July 6, 2022. The groundwater analytical results indicated that all BTEX compounds in the samples collected from well MW-1R were detected at concentrations below the NJDEP Class II-A GWQS. Well MW-1R was abandoned on August 3, 2022 and the well abandonment report is presented in **Appendix I**.

Based on these findings, the groundwater remedy of natural attenuation was successful and remediation of residual benzene in the groundwater associated with AOC-1 is complete. Therefore, the NJDEP should remove the CEA from the site, and the LSRP of Record will issue an unrestricted use Response Action Outcome (RAO) for the AOC.

2.0 PROJECT DEFINITION AND BACKGROUND

On behalf of the New Jersey Transit Corporation (NJT), Dewberry Engineers Inc. (Dewberry) prepared this Quality Assurance Project Plan (QAPP) for the Allied Building Supply Co. located at XX Elizabeth Avenue, Linden, Union County, New Jersey. This QAPP was prepared using guidance from the New Jersey Department of Environmental Protection (NJDEP) and the U.S. Environmental Protection Agency's (USEPA) requirements for a QAPP, in accordance with the following guidelines:

1. New Jersey Administrative Code (NJAC) 7:26E-2.2, Supp.;
2. NJDEP "Field Sampling Procedures Manual (FSPM)," August 2005/Last Updated April 2011;
3. NJDEP QAPP Technical Guidance, April 2014;
4. NJDEP Data of Known Quality Protocols (DKQP) Technical Guidance, April 2014;
5. USEPA Guidance for the Data Quality Objectives Process, EPA QA/G-4, August 2000; and
6. USEPA Requirements for QAPPs, EPA QA/R-5, April 2001.

This QAPP was prepared to serve as the guidance document for the quality assurance/quality control (QA/QC) requirements for implementation of the investigation.

2.1 Project Definition

The Site is the former Allied Building Supply Co. The Site was previously used as a building supply yard and has been the subject of remediation and on-going groundwater monitoring since 1993, when a release of gasoline was discovered during the removal of a 2,000-gallon leaded gasoline underground storage tank (UST). Petroleum-impacted soils were removed during the UST closure activities, and the results of post-excavation soil samples were in compliance with the NJDEP cleanup levels in effect at that time. Six monitoring wells were installed and sampled, and the results indicated the presence of petroleum-related benzene, toluene, ethylbenzene, and total xylenes (BTEX) in groundwater at concentrations greater than their respective NJDEP Class II-A Ground Water Quality Standards (GWQS). A Classification Exception Area (CEA), based on monitored natural attenuation (MNA) and defined as the property boundary, was established for BTEX in 1998. The NJDEP issued a letter of No Further Action NFA-A (Limited Restricted Use) in 1998. The site was acquired by NJ TRANSIT in 2000 and converted into Linden Station Parking Lot 2. A Biennial Certification Monitoring Report for the CEA was submitted to the NJDEP and approved in 2010. Dewberry, on behalf of NJ TRANSIT, reviewed prior UST work completed by others to advise how to bring the site to regulatory closure.

The objective of this SI/RI is to finish the remedial activities associated with the Site and issue an unrestricted area of concern (AOC)-specific Response Action Outcome (RAO) for the Site.

The Site Investigation/Remedial Investigation (SI/RI) activities at the site will be completed in accordance with the NJDEP Technical Requirements for Site Remediation (TRSR) NJAC 7:26E, the Site Remediation

Reform Act (SRRA), New Jersey Statutory Act (NJSA) 58:10C-1 et seq., and the Administrative Requirements for the Remediation of Contaminated Sites (ARRCS) NJAC 7:26C. The field activities will be performed in accordance with the NJDEP Field Sampling Procedures Manual (FSPM) (August 2005; Last Updated April 2011), and implemented in accordance with a Dewberry site-specific Health and Safety Plan (HASP).

2.2 Project/Task Description

SI includes the installation of four temporary well points and sampling for benzene, toluene, ethylbenzene, and xylenes (BTEX). The RI consists of the installation of one permanent monitoring well and two consecutive quarterly rounds of sampling for BREX.

Activities	Anticipated Date(s) of Initiation	Anticipated Date(s) of Completion	Deliverable
SI implementation	03/15/2022	08/15/2022	Summary Email
RI Implementation	04/15/2022	07/15/2022	Summary Email
Prepare Site Investigation Report/Remedial Investigation Report (SIR/RIR)	05/01/2022	09/01/2022	SIR/RIR

3.0 PROJECT TEAM

The table below provides personnel name, their title, contact information, and responsibilities for this project.

Name	Title	Telephone Number	Organizational Affiliation	Responsibilities
Mike Matri	Director of Site-Remediation	845.783.5498	NJ TRANSIT	Project logistic and planning technical activities, project budget, and schedule
Charles Stebbins, LSRP	LSRP/Task Manager	973.576.9641	Dewberry Engineers Inc.	Day-to-day management of project including technical review of reports, budget, and schedule
John Robinson, LSRP	LSRP/Project Manager	973.576.9635	Dewberry Engineers Inc.	Day-to-day management of project including technical review of reports, budget, and schedule
Bill Pendexter	Quality Assurance Manager	973.576.9648	Dewberry Engineers Inc.	QA review of project deliverables

Name	Title	Telephone Number	Organizational Affiliation	Responsibilities
Thomas Cumello, PG	Health and Safety Officer/Field Supervisor	973.576.9685	Dewberry Engineers Inc.	HASP preparation and compliance/Field Supervision
Jameal Hammond	Assistant Engineer/Geologist	973.576.9645	Dewberry Engineers Inc.	Field Oversight
Michelle Kennedy	Environmental Laboratory Contact	973.244.9770 X119	Hampton Clarke	Environmental Laboratory Contact for all sampling analyses. Coordinate timely analysis of samples and provide final data

4.0 SAMPLING SCOPE OF WORK

The SI and RI sampling activities will be performed in accordance with this QAPP. According to the NJDEP TRSR Table 2-1 (Analytical Requirements for Petroleum Storage and Discharge Areas), the groundwater samples will be collected from the TWPs and analyzed for full Target Compound List/Target Analyte List constituents plus 30 additional, non-targeted peaks (TCL/TAL+30) and cyanide. TCL Base Neutral (BN) Secondary Ion Mass Spectrometry (SIMS) analyses will be done on the groundwater sample(s), so that the GWQS will be met. The groundwater samples will be analyzed by Hampton-Clarke Laboratory, located at 175 west Route 46, Fairfield, New Jersey. Laboratory analyses would be performed in accordance with the Standard Operating Procedures (SOPs) provided by Hampton-Clarke, as presented in Appendix A.
DATA QUALITY OBJECTIVES

The Data Quality Objectives (DQOs) for the project are to generate usable data of known and acceptable quality and integrity. DQOs are met by conducting field sampling and data collection activities in accordance with the FSPM and selecting an appropriate analytical methodology for sample analysis conducted by the selected laboratory.

The objectives for the Site are as follows:

- Benzene less than NJDEP's groundwater cleanup level of 1 micrograms per Liter (ug/L) – For benzene, the NJDEP Class II-A Groundwater Quality Standards (GWQS) is 1.0 ug/L
- Toluene less than NJDEP's groundwater cleanup level of 600 ug/L - For toluene, the NJDEP Class II-A GWQS is 600 ug/L
- Ethylenzene less than NJDEP's groundwater cleanup level of 700 ug/L - For ethylbenzene, the NJDEP Class II-A GWQS is 700 ug/L
- Total Xylenes– For M-xylene and P-xylene, and O-xylene, there are no NJDEP Class II-A GWQS.

The overall QA objective of the QAPP is to provide procedures which will verify that decisions based on laboratory and field data generated during this investigation are technically sound, statistically valid, and properly documented. The primary purpose of this Section is to define statistical acceptance criteria for

chemical data generated by the analytical laboratory. The measurement of quality includes the precision, accuracy, representativeness, comparability, and completeness parameters.

- Precision – Precision can be obtained by calculating the relative percent difference (RPD) between data obtained from duplicate sample analyses, and laboratory control sample/laboratory control sample duplicate (LCS/LCSD) analyses. The RPD should not exceed an RPD of 30 percent for a water sample and 50 percent for a solid sample.
- Accuracy – Accuracy is the degree of agreement of a measured value and a known or true value. Analytical accuracy can be measured by measuring the percent recovery (%R) from samples spiked with reference standards (e.g., surrogate recoveries, laboratory control sample recoveries, matrix spike recoveries, reference material recoveries, etc.).
- Representativeness – Representativeness refers to selecting number of samples, sampling locations, and analyses in order to assess the site conditions.
- Completeness – Sampling completeness is determined by the number of valid samples collected relative to the number of samples planned for collection. Analytical completeness is determined by number of valid sample measurements relative to the number of valid samples collected.
- Comparability – Comparability is defined as the confidence level of one data set to another.

5.0 LABORATORY DELIVERABLES

NJDEP Level II, Level III, or NJDEP Reduced Data Deliverable/analytical laboratory DKQP will be ordered for the sampling data.

Electronic Data Deliverables (EDDs) will be processed and submitted to the NJDEP through the NJDEP Online Portal or via email.

6.0 FIELD SAMPLING PROCEDURES

The sample collection will comply with the NJDEP FSPM. Soil samples will be collected with a stainless-steel scoop or dedicated disposable sampling devices for surface and post-excavation soil samples. For sample collection using direct push technology and drill rig, samples will be collected from decontaminated carbon-steel split spoons or disposable macrocore liners.

Groundwater samples will be collected using dedicated polyethylene or Teflon-lined bailers. Other sampling methods will include the use of a stainless-steel submersible pump or peristaltic pump. A peristaltic pump will not be used for volatile and semi-volatile organic compounds (VOCs) as specified in the FSPM.

7.0 FIELD DOCUMENTATION

The sample containers will have proper identification/labels, including sample identification number, project number, project name (if needed abbreviated), analytical parameters, date and time of collection, sample depth, and as applicable preservative information. Each sample and sample collection method will be logged in the field log books. Field logs will record details such as purpose of work, area of work,

weather/day/time of the work, visual or field screening observations, field equipment calibration data, any deviation from the work plan, name and affiliations of visitors, subcontractors, the reason for visit, and any discussions related to the investigation and remediation activities at the site. The sampling details including sample identification number, date and time of collection, depth to groundwater (if known), and sample collection depth.

8.0 DECONTAMINATION

Reusable field equipment will be decontaminated to prevent cross-contamination prior to sampling and between sampling points. Decontamination will be completed by scrubbing the sampling equipment with laboratory-grade detergent and brush, rinsing it with tap water, and then rinsing with distilled/deionized water. Single-use/disposable sampling equipment will not be decontaminated.

9.0 SAMPLE HANDLING

The samples will be transported in coolers with ice to maintain a temperature of 4±2°C. A trip blank will accompany samples collected for VOCs. The samples will be accompanied by a completed chain-of-custody form.

10.0 ANALYTICAL METHODS, PRESERVATION, AND HOLD TIMES

The following table provides details regarding the analytical methods, preservation, and hold times associated with the different types of samples collected on this project. The waste characterization parameters may vary based on disposal facility requirements.

Analytical Parameter	Analytical Method	Sample Preservation	Sample Container	Holding Time
Groundwater Samples				
VOCs (BTEX)	SW846 5035/8260C	Cool, 4±2°C, HCl	3 200 ml glass vials	14 days until analysis

11.0 QUALITY ASSURANCE/QUALITY CONTROL PROCEDURES

This section discusses field and laboratory QC requirements. Laboratory QC requirements are dictated, in large part, by the analytical methods.

The collection of duplicate samples provides an evaluation of the laboratory's and sampler's performance by comparing the analytical results of two samples from the same location. The sample should be submitted

to the laboratory as a "blind" sample. Duplicate requirements may be waived or expanded depending on the particular regulatory program or remedial phase involved. Collection of duplicate samples, if required, will be performed as per Section 2.5.7.1 of the FSPM, which is one duplicate sample per 20 samples.

For groundwater samples, one field blank per day will be collected to identify cross-contamination from sample equipment handling, sample preparation, storage, or transportation. Laboratory-provided water is passed through the field sampling devices and into the empty laboratory-provided containers. This procedure will demonstrate ambient conditions and equipment decontamination issues that can impact the sample data.

Because VOC analysis will be performed, one trip blank will be required for each cooler containing VOC samples.

Laboratory Quality Control Requirements

QC data are necessary to determine the precision and accuracy of the analyses and to demonstrate the absence of interferences and contamination of glassware and reagents. Laboratory-generated QC will consist of blanks, replicates, and standards (surrogate) injections. These will be prepared and analyzed at the method-required frequencies. Surrogates will be added to all samples requiring GC analyses (or as specified in the method). At a minimum, one method blank will be processed by the laboratory for every batch (up to 20 samples) analyzed. Blank samples will be analyzed in order to assess possible contamination and determine which corrective measures may be taken, if necessary.

Laboratory Duplicates

Replicate samples are aliquots of a single sample that are split upon arrival at the laboratory or prior to analysis. Laboratory duplicates are required by methods for inorganic analyses. Since it is anticipated that the concentrations of most organic parameters will be below the laboratory detection limits, precision data on replicate analyses will largely be derived from matrix spike duplicate data. Significant differences between two replicates that are split in a controlled laboratory environment will result in flagging (J or estimated, or * for duplicate analysis not within control limits) of the affected analytical results.

Surrogate Analysis

Surrogate spike analysis is used to determine the recovery efficiency of analytes in the sample preparation and analysis. The calculated percentage recovery of the spike is used as a measure of the accuracy of the total analytical method. A surrogate spike is prepared by adding to a sample (before extraction) a known amount of pure compound similar to that for which the sample is being analyzed. Surrogate compounds will be added to all samples that are to be analyzed for volatiles, semi-volatiles, and pesticides, including method blanks, duplicate samples, and matrix spikes using the compounds recommended in the respective methods. If a recovery does not fall within these limits, the corrective actions described in the method will be implemented.

Method Blanks

Method blanks will be run for all appropriate analyses to verify that the procedures used do not introduce contaminants that affect the analytical results. The method blank will be prepared by addition of all reagents to a substance of a similar matrix as the sample. This blank will then undergo all the procedures required for sample preparation. The resultant solution will be analyzed with the field samples prepared under identical conditions.

Deviations from the established QC criteria will be noted and reanalysis, or other corrective action, will be instituted as appropriate for the situation.

12.0 DATA REVIEW AND USABILITY

The data review and usability will encompass examining the fieldwork and laboratory analyses to determine any issues encountered that may jeopardize the usability of the data. The data review, which will be overseen by the LSRP, will compare the sample collection methods and the number/location of samples collected against what was proposed in the workplan. NJAC 7:26E does not specify requirements that the laboratory data be validated in-house or by a third party. If data validation is needed based on the project requirement or professional judgment, then the data will be reviewed and accepted, rejected, or qualified, as discussed in the Data Usability Assessment and Data Usability Evaluation Guidance Document. Data reliability will be discussed whether data validation is conducted or not. The data reviewer will contact the laboratory when any deficiency has been identified and will request further explanation. The corrective actions will be agreed on by the environmental consultant/LSRP and laboratory. If data is deemed unusable, then it will be flagged as rejected and/or will be appropriately flagged/qualified.

13.0 DATA MANAGEMENT AND DOCUMENTATION

Records generated during this project will be kept on file by Dewberry on behalf of O&R. These records may include field logbooks, field sampling forms, chain of custody forms, laboratory data deliverables, photographs, historic reports, this QAPP, and other relevant records.

Revisions and updates to this QAPP will be prepared as deemed necessary and/or based upon conditions observed in the field. A full revision to the QAPP will be prepared if work has not been completed within five years. This will ensure that laboratory changes or method improvements are addressed and that changes to program objectives or scope that may be made as a result of the information gathered in the initial program stages are incorporated into the overall QA/QC program.

Field Sample Collection Documents and Records	Analytical Laboratory Documents and Records	Data Assessment Documents and Records	Project File
• Site and field logbooks • Boring logs • Chain-of-custody forms • Field Data Sheets	• Sample receipt logs • Internal and external chain-of-custody forms • Equipment calibration logs • Sample preparation worksheets/logs • Sample analysis worksheets/run logs • Corrective action documentation (if required)	• Data validation reports • Field inspection checklist(s) • Laboratory Audit checklist (if performed) • Corrective action documentation (if required)	• The project file will be maintained by Dewberry's LSRP for a minimum period of 10 years following project completion.

Determination of Metals Using Inductively Coupled Plasma – 6010D (OPTIMA)

1.0 PURPOSE AND APPLICATION

1.1 The purpose of this procedure is to describe in detail the steps used in the performance of the analysis of metals in various media by Inductively Coupled Plasma Optical Emission Spectroscopy. This procedure describes the technique for the simultaneous multi-element determination of trace elements in solution.

1.2 This method is applicable to a large number of metals. All matrices - including groundwaters, aqueous samples, TCLP extracts, SPLP extracts, industrial wastes, soils, sludges, sediments and other solid wastes - require digestion prior to analysis.

1.3 This SOP is applicable to the elements and their reporting limits (RL) listed in Table 1.

2.0 REFERENCES

2.1 Test Methods for Evaluating Solid Waste, Physical/Chemical Methods, SW 846, 22nd Edition, EPA Method 6010D, Revision 4, July 2014.

2.2 Hampton-Clarke Quality Assurance Manual, current revision.

3.0 METHOD SUMMARY

3.1 The basis of the method is the measurement of atomic emission by an optical spectroscopic technique. Samples are nebulized and the aerosol produced is transported to the plasma torch where excitation occurs. Characteristic atomic-line emission spectra are produced by radio frequency inductively coupled plasma. The spectra are dispersed by a grating spectrometer and the intensities of the line emissions are monitored by photomultiplier cells. The photocurrents from the photomultiplier tubes are processed and controlled by a computer system.

4.0 SAMPLE COLLECTION, PRESERVATION AND STORAGE

4.1 Solid samples should be collected in 2 ounce glass jars. This volume will be sufficient to insure a representative sample, allow for replicate analysis, if required, and minimize waste disposal. If additional tests are being requested an 8 ounce jar is used. If the sample is an aqueous waste, the sample should be collected in a 16-ounce glass jar.

4.2 Holding time is 6 months days from date of collection.

4.3 Refrigerate samples at 4°C (± 2°C) upon receipt until analysis.

5.0 INTERFERENCES

5.1 Spectral interferences are caused by background emission from continuous or recombination phenomena, stray light from the line emission of high concentration elements, overlap of a spectral line from another element, or unresolved overlap of molecular band spectra.

5.1.1 Background emission and stray light can usually be compensated for by subtracting the background emission determined by measurements adjacent to the analyte wavelength peak. Spectral scans of samples or single element solutions in the analyte regions may indicate when alternate wavelengths are desirable because of severe spectral interference. These scans will also show whether the most appropriate estimate of the background emission is provided by an interpolation from measurements on both sides of the wavelength peak or by measured emission on only one side. The locations selected for the measurement of background intensity will be determined by the complexity of the spectrum adjacent to the wavelength peak. The locations used for routine measurement must be free of off-line spectral interference (interelement or molecular) or adequately corrected to reflect the same change in background intensity as occurs at the wavelength peak.

5.1.2 To determine the appropriate location for off-line background correction, scan the area on either side adjacent to the wavelength and record the apparent emission intensity from all other method analytes. This spectral information must be documented and kept on file. A computer routine is used for automatic correction on all determinations. If a wavelength other than the recommended wavelength is used, the analyst must determine and document both the overlapping and nearby spectral interference effects from all method analytes and common elements and provide for their automatic correction on all analyses. Perform tests to determine spectral interference using the ICSA.

5.1.3 Spectral overlaps are avoided by using an alternate wavelength and / or compensated by equations that correct for interelement contributions. The Optima 3000DV uses equations for interelement correction. The interfering elements are analyzed at the same time as the element of interest, as required. The analyst will apply interelement correction equations determined on their instruments with tested concentration ranges to compensate (off line or on line) for the effects of interfering elements.

5.1.4 When using interelement correction equations, interference express analyte concentration equivalents (i.e. false analyte concentrations) arising from 100 mg/L of the interference element. For example, assume that As is to be determined (at 193.696 nm) in a sample containing approximately 10 mg/L of Al. According to Table 2, 100 mg/L of Al would yield a false signal for As equivalent to approximately 1.3 mg/L. Therefore, the presence of 10 mg/L of Al would result in a false signal for As equivalent to approximately 0.13 mg/L.

5.1.5 Interelement corrections will vary depending upon the choice of background

correction points. Avoid selecting a background correction point where an interfering emission line may appear. Interelement corrections that constitute a major portion of an emission signal may not yield accurate data. Do not forget that some samples may contain uncommon elements that could contribute spectral interferences.

5.1.6 The intensities will vary not only with optical resolution but also with operating conditions (such as power, viewing height and argon flow rate). When using the recommended wavelengths, the analyst is required to determine and document for each wavelength the effect from referenced interferences (Table 5) as well as any other suspected interferences that may be specific to the instrument or matrix..

5.2 Physical interferences are effects associated with the sample nebulization and transport processes. Changes in viscosity and surface tension can cause significant inaccuracies, especially in samples containing high dissolved solids or high acid concentrations. If physical interferences are present, they must be reduced by diluting the sample. Another problem that can occur with high dissolved solids is salt buildup at the tip of the nebulizer, affecting aerosol flow rate and causing instrumental drift. This problem is controlled by using a high solids nebulizer.

5.3 Chemical interferences include molecular compound formation, ionization effects, and solute vaporization effects. Normally, these effects are not significant with the ICP technique, but if observed, can be minimized by careful selection of operating conditions (incident power, observation position, and so forth) and by matrix matching. Chemical interferences are highly dependent on matrix type and the specific analyte element.

5.4 Memory interferences result when analytes in a previous sample contribute to the signals measured in a new sample. Memory effects can result from sample deposition on the uptake tubing to the nebulizer and from the build up of sample material in the plasma torch and spray chamber. The site where these effects occur is dependent on the element and can be minimized by flushing the system with a rinse blank between samples. The possibility of memory interferences should be recognized within an analytical run and suitable rinse times should be used to reduce them. A rinse time of at least 60 seconds is used. If memory interference is suspected, the sample must be reanalyzed after a rinse period of sufficient length. Alternate rinse times may be established by the analyst based upon DQOs.

5.5 The dashes in Table 5 indicate that no measurable interferences were observed even at higher interferent concentrations.

6.0 SAFETY

6.1 Each reagent and chemical used in this method should be regarded as a potential health hazard and exposure should be as low as reasonably achievable.

6.2 Always wear safety goggles, gloves and protective clothing (Lab Coat) when working with theses chemicals and reagents.

6.3 Due to ultraviolet emissions, the ICP should only be viewed with the proper eye protection.

7.0 REQUIRED EQUIPMENT

7.1 Inductively Coupled Plasma Atomic Emission Spectrometer
(PE OPTIMA 8300DV / PE OPTIMA 4300DV/ OPTIMA 7300DV)

7.2 Computer (PC Positive).

7.3 Printer (Hewlett-Packard Laser Jet Series II).

7.4 Autosampler, Perkin-Elmer AS91

7.5 Variable speed peristaltic pump

7.6 Argon gas supply and compressed air and nitrogen supply, high purity (99.99%).

7.7 Eppendorf pipettes – assorted (20 to 5000 ul) with disposable tips, calibrated.

7.8 Volumetric flasks, Class A.

7.9 15 mL centrifuge tubes.

7.10 Air compressor.

7.11 Nitrogen gas supply, high purity (99.99%).

8.0 STANDARDS AND REAGENTS

8.1 Hydrochloric acid, conc. 36.5 - 38.0% (sp gr 1.19), trace metal grade.

8.2 Nitric acid, conc. 70.0 - 71.0% (sp gr 1.43), trace metal grade.

8.3 Deionized Water, conductivity < 2.0 uhoms/cm.

NOTE: All standards and blanks are acidified with 5% Nitric and Hydrochloric acid.

8.4 Rinse Blank - used to flush the instrument uptake system and nebulizer between standards, samples and check solutions (5% HNO_3, 5% HCl). Prepare a sufficient quantity to be used to flush the system between standards and samples.

8.5 Calibration Blanks - used in establishing the analytical curve. Prepared in the same concentration of acid as the calibration standard. For preparation use Table 1.

8.6 Standard calibration stock solutions - Purchased from commercial vendors. All purchased calibration standards must be traceable to NIST. Certificates of purity must accompany commercially prepared standards and are maintained on file in the Metals Laboratory.

8.6.1 Calibration Standards (ICS-2 , ICS-3 & ICS-4) - used to calibrate the instrument response with respect to analyte concentration. See Table 6 for concentrations. For preparation use Table 1.

8.6.2 Initial Calibration Standard 3 (ICS-3) - used to verify instrument performance after calibration. See Table 6 for element concentrations. For preparation use Table 1.

8.6.3 Initial Calibration Standard 2 (ICS-2) - used to verify instrument performance after calibration. Concentrations are the same as the RL. See Table 6 for element concentrations. For preparation use Table 1.

8.6.4 Linear Range Standard (LRS)- Establishes the highest concentration that may be reported without diluting the sample. See Table 6 for concentrations. For preparation use Table 1.

8.7 ICV – must be analyzed immediately following the ICSA(SIC). The quality control sample for the initial calibration verification must be in the same acid matrix as the calibration standards and in accordance with the instructions provided by the supplier. The concentration of the ICV must be near the midpoint of the calibtration curve. This sample must come from a different source other than that used for calibration. For preparation use Table 1. See table 6 for element concentration.

8.8 Initial Calibration Blank (ICB) - must analyzed immediately following ICV. See section 8.5. For preparation use Table 1.

8.9 Continuing Calibration Verification and Continuing Calibration Blank (CCV, and CCB) - used after every tenth sample (or more frequently if desired) and at the end of a sample run to verify instrument performance during analysis.

8.9.1 CCV - the instrument check standard for continuing calibration verification is prepared by the analyst by combining compatible elements at a concentration equivalent to the mid-points of their respective calibration curves. See Table 6 for element concentrations. For preparation use Table 1.

8.9.2 CCB - see section 8.5.

TABLE 1 -PREPARATION OF CALIBRATION STANDARDS

Solution	CAL 1	CAL 2	ICV 1	ICV 2	ICSA	LRS 1B	LRS 1C	LRS 2D	LL-SOIL	LL-LEACH	LL-AQ	B	Si	HNO3	HCL	FINAL VOL.
ICB/CCB														50mL	50ml	1000mL
ICS2 (SOIL)									10mL			.2mL	.1mL	50ml	50ml	1000ml
ICS2 (LEACH)										10mL		.2mL	.1mL	50ml	50ml	1000ml
ICS2 (AQ)											5mL	.1mL	.05ml	25mL	25ml	500mL
ICS3	5mL	5mL										.5mL	5ml	50ml	50ml	1000ml
ICS4	5mL	5mL										.5mL	5ml	25mL	25mL	500ml
ICSA					50mL									50ml	50ml	1000ml
LRS						50mL	50mL					2.5ml	12.5ml	25mL	25mL	500ml
LRS (alternate)						50mL		50ml				2.5ml	12.5ml	25mL	25mL	500ml
ICV/CCV			10ml	10ml								0.5ml*	5ml*	50ml	50ml	1000ml

*ICV/CCV must use different source from calibration standards

8.10 Spectral Interference Check (SIC = ICSA) - must be analyzed at the start of a sample run. The solution contains concentrations of interfering elements at levels that will provide an adequate test of the correction factors. The interference check sample is purchased from a Commercial Vendor (SCP Science). See Table 6 for element concentrations.

8.11 Interelement Correction Factors (IEC) - When interelement corrections are applied, IEC solutions are needed containing concentrations of the interfering elements at levels that will provide an adequate test of the correction factors.

8.11.1 Single Element solutions containing Al (500mg/L), B (5mg/L), Ba (50mg/L), Ca (500mg/L), Cu (25mg/L), Fe (400mg/L), Mg (500mg/L), Mn (25mg/L), Mo (50mg/L), Ni (50mg/L), Se 25mg/L), Si (25mg/L), Sn (25mg/L), Ti (25 mg/L), V (50mg/L) and Zn (25mg/L).

NOTE: Example interferences are found in Table 4. Actual interferences must be determined on each instrument and may vary.

8.12 LCS and MS/MSD Spiking Solutions - see table 7 for aqueous spiking concentrations. A solid Certified Reference Material is purchased from ERA (cat # 540) and is used for soils.

8.13 POST DIGESTION SPIKE – If the MS/MSD recoveries are unacceptable, the same sample from which the MS/MSD aliquots were prepped should be spiked with a post digestion spike. Add 0.2 ml of spiking solution to 20 ml portion of sample. Otherwise, another sample from the same preparation batch should be used as an alternative. An analyte spike should be recovered within 75-125% of the known value. If both the MS/MSD and Post Digestion Spike fail, then matrix effects are confirmed. See Table 7 for spiking concentrations.

8.14 Internal Standard Solution: 2ppm of Scanadium and 1ppm of Ytrium in 5% HNO3 and 5% HCL. Used on OPTIMA 4300DV, OPTIMA 7300DV, OPTIMA 8300.

8.15 For oil samples prepared by SW846 3031, prepare the Calibration Blanks, Calibration standards, calibration verification standards and IEC check standards with 2% HNO_3, 10% HCl and 1.5% H_2SO_4.

8.16 Intermediate Standard Solution for Boron and Silicon 100ppm. To a 50ml volumetric add 10 ml of deionized water, 2.5 ml of Nitric Acid, 2.5 ml Hydrochloric Acid, 5 ml of stock Boron (1000ug./ml) and 5ml stock Silicon (1000ug/ml). Bring to a final volume of 50ml with dieonized water.

9.0 INSTRUMENT SET-UP

9.1 Checking the system.

9.1.1 Argon supply: be sure that an adequate supply of argon is available and is connected to the system. Check that the cylinder valve is open and the regulator is set within the range of 550-825 kPa (80-120 psig).

9.1.2 Nitrogen supply: be sure that an adequate supply of nitrogen is available and is connected to the system. Check that the cylinder valve is open and the regulator for the nitrogen outlet pressure is set within the range of 220-825 kPa (30-120 psig).

9.1.3 Compressed air: check that the pressure for the air compressor, the prassure should be around 450 kPa (65 psig).

9.1.4 Cooling water supply: check that the cooling water supply is connected to the back of the instrument. Be sure the chiller is turned on and has been filled with water.

9.1.5 Sample introduction system: inspect the torch, glassware, and aerosol injector tube. The glassware should be clean (a small amount of deposits is acceptable in most cases). Check that the RF coil is clean. Be sure that the coil is dry. If necessary, use a soft cloth to dry it.

9.1.6 Peristaltic pump and tubing: change the pump tubing daily. Check that the pump rollers are clean and can move freely.

9.1.7 Drains: check that the spray chamber drain is properly set up on the pump so that waste is pumped out of the spray chamber. Empty the drain bottle if necessary.

9.1.8 Auto sampler: install the tray in the auto sampler and place the wash beaker in the rear left of the tray (location 0). Check that the sampling probe is installed at the correct height and the probe capillary is attached to the pump tubing for the sampling.

9.1.9 Printer: check that the printer is on and has an adequate supply of paper to print the results on.

9.2 Starting the instrument and accessories.

9.2.1 Put the main instrument switch on. Usually, this switch should remain on to avoid a waiting period for instrument startup

9.2.2 Put the RF generator standby switch on (if it is not already on).

9.2.3 Switch on the computer, monitor, and printer.

9.2.4 From program manager, double-click on the Win Lab32 icon. It will verify the instrument configuration such as: "auto sampler"; "plasma view"; etc.

9.2.5 Click the PLASMA switch to ON in the plasma control window (or press F9) to turn on the plasma. A successful ignition is indicated by the message on the status line on the computer. The yellow plasma on light on the front of the instrument will be on.

9.2.5.1 A stable plasma will be situated just above the inner quartz tube in the torch and will have a bright discharge.

9.2.5.2 Allow the plasma to warm up for 1/2 hour before starting analysis. This will allow the temperature of the sample introduction system to fully stabilize.

9.3 At the beginning of each day, once the instrument has had adequate time to warm-up (allow at least a ½ hour for stabilization) , profile the instrument.

9.3.1 Ignite torch and wait ½ hour for stabilization.

9.3.2 Select MANUAL for the run mode.

9.3.3 Go to METHOD and select PE1 axial / PE2 axial.

9.3.4 Go to "Results Data Set Name" and name the data as "Profile."

9.3.5 Place the sampler probe into a 1 ppm solution of Mn and Cu. Press ANALYZE SAMPLE button. The instrument will begin to analyze the sample.

9.3.6 When the instrument is finished analyzing, exit "Manual."

9.3.7 Go to "Exam" and press DATA, then press DATA SET, and then open "Profile."

9.3.8 Select profile ID, press OK.

9.3.9 Select Mn, press OK.

9.3.10 The Mn peak will be displayed. Go to FILE and then print.

9.3.11 Calculate the Cu/Mn ratio of mean corrected intensities. Record in run log. Save the printed report in the binder. Make sure the range is between 0.1-0.5. If it is outside the limit, the problem must be corrected before sample analysis may begin.

10.0 CALIBRATION AND SAMPLE ANALYSIS.

10.1 To analyze samples automatically a new sample information must be created file or an available sample information file must be modified (which must include the parameters needed to describe the sample).

NOTE: Modifying an existing file is the more common procedure.

10.1.1 To modify a saved sample information file, select FILE and click on OPEN and select SAMPLE INFO FILE. Select the sample information file that has been chosen for modification and click OK. Enter autosampler locations and ID on sample information file.. To save the file with a new name, Select FILE and click on SAVE AS and click on SAMPLE INFO FILE. When the save as dialog appears, type the desired name for the file and then click O.K.

10.1.2 Performing automated analysis.

10.1.2.1 To perform an automated analysis click on AUTO on the toolbar. Double-click on an entry field in the Method column and in the "Open Method" dialog box that appears, select a method.

10.1.2.2 To specify the name of the sample information file, click on OPEN at sample information file. Select the name of the sample information file. Then select the box in the "Defined In the Sample Info File" column. If only a portion of the samples in the sample information file need to be analyzed, type the individual locations in the "Locations" column. Use commas to separate the locations and ranges. Do not enter locations of blank, QC, check or calibration solutions (10-15,18,20,25-30; e.g.).

10.1.2.3 To save the results data set, click on OPEN at "Results Data Set Name". Type a new data set name (example batch name: B1749A) or select an existing one. Select SAVE DATA box to save the data. Select PRINT LOG box to print the data.

10.1.2.4 Select SET for automatic shutdown/startup of the instrument. Select options controlling time and events to occur at shutdown and startup.

10.1.2.5 Click on Analyze to open the automated analysis control window. There are two options for calibration and analysis:

1) Select ANALYZE ALL to calibrate and analyze samples.

2) First select CALIBRATE for calibration only. Once calibration is completed, click on ANALYZE SAMPLES to start analyzing samples.

11.0 CALCULATIONS

11.1 Analyze and report reagent (prep) blanks in the appropriate units, mg/L for water and mg/kg for soil (ppm).

11.2 If dilutions are performed, the appropriate factor(s) must be applied to the sample values, as well as MDL's.

11.3 Final concentrations (C_f) on solid matrices are calculated as follows:

$$C_f = \frac{C_s * V}{W} * \frac{1}{D}$$

where, C_s = sample concentration
V = final volume (ml)
W = sample weight (g)
D = dryness factor - dry weight as a decimal fraction (i.e. 80% dry weight is a 0.80 dryness factor)

11.4 Individual component percent recoveries (P) are calculated as follows:

$$P = \frac{(S - U) * 100}{T}$$

where, S = spiked sample conc. (mg/L)
U = unspiked sample conc. (mg/L)
T = theoretical spike (mg/L)

11.5 The relative percent difference (RPD) for each component is calculated as follows:

$$RPD = \frac{|(F - G)| * 100}{(F + G) / 2}$$

where, F = original sample result
G = duplicate result

11.6 The percent differences for each component for serial dilutions are calculated as follows:

$$\% \text{ difference} = \frac{I - S}{I} * 100$$

where, I = initial sample result
S = serial dilution result

12.0 QUALITY CONTROL

12.1 Prior to the analysis of samples the following requirements must be met (This must be repeated annually).

12.1.1 Background Correction Points must be determined prior to the analysis of samples and the information documented. Analyze low and high levels of single element solutions and plot them to view if any points are needed.

12.1.2 Interelement Correction Factors (IEC) - Determine the IEC prior to the analysis of samples and every 6 months thereafter.

12.1.2.1 The ICSA is run at the beginning of each analytical run.

12.1.3 Linear Range Standard (LRS) - Determine the LR for each element prior to the analysis of any samples. A standard at the LR must be analyzed for every element and recovered within 10%. The Linear Range Standard must be included with each analytical run.

12.1.4 Instrument Detection Limit (IDL) - The concentration equivalent to the analyte signal which is equal to three times the standard deviation of a series of ten replicate measurements of the calibration blank signal at the same wavelength. This must be done quarterly.

12.1.5 Method Detection Limit (MDL) - An MDL must be determined for each analyte prior to the analysis of any samples and ***annually*** thereafter. The initial MDL is determined by analyzing 7 (or more) spiked samples and 7 (or more) blank samples, which are prepared and analyzed on three separate days. The higher of the two values is then used as the MDL. Thereafter, all method blank results from the previous two years are used to calculate the MDL(blank) value, while MDL spiked samples are prepared and analyzed every quarter (minimum 2 samples per quarter). The spiked samples from the last two years are used to calculate the MDL(spike). After determining MDL(blank) and MDL(spike), the two values are compared, with the higher of the two values being used as the MDL.

12.1.6 Reporting Limit (RL) – The reporting limit is the level at which a hit for an analyte is reported. Any concentration below the RL is reported as ND. The RL is greater than the MDL but less than or equal to the regulatory limits.

12.1.7 Lower Limit of Quantitation Check Sample (LLQC) – must be analyzed after establishing the laboratory RL and on an as needed basis to demonstrate the desired detection capability. The LLQC is initially determined with seven replicate samples spiked at the RL, then processed through all preparation and analysis steps of the method. The mean recovery should be within 35% of the true value and the RSD $\leq$20%. This check is used to both establish and confirm the lowest quantitation limit. Thereafter, the LLQC must be confirmed quarterly by processing a single sample through all steps of the method and achieving a recovery within 35% of the true value.

12.2 Initial Calibration - A calibration curve must be run prior to sample analysis. A minimum correlation coefficient of 0.998 must be obtained to meet internal QC requirements. If the correlation coefficient of 0.998 is not met, a new calibration curve must be prepared and

analyzed. An initial calibration verification (ICV) is analyzed immediately after standardization and must be ± 10% recovery of known true value. If the ICV fails, it warrants corrective action, which includes, but not limited to recalibrating.

12.3 Instrument Check Standards - Check the instrument calibration by analyzing appropriate quality control check standards as follows:

12.3.1 The Mid Calibration Standard (ICS-3) should be run prior to the beginning of the batch run. The results should agree within 10 % of the true value.

If the result is not within the control limit, terminate the analysis, correct the problem and recalibrate the instrument. If this does not correct the problem, prepare new stock and calibration standards and repeat the calibration.

12.3.2 Low Calibration Standard (ICS-2) – This standard must be analyzed prior to sample analysis. The results are to agree within 20% of the true value. Concentrations in the ICS-2 must be at or below the RL.

12.3.3 Linear Range Standard (LRS) - This standard may be analyzed during sample analysis. The results are to agree within 10% of the true value. If the LRS is not run or if it fails, the Linear Range is instead the concentration of the highest calibration standard.

12.3.4 Initial Calibration Verification (ICV) - A quality control sample must be used daily for the ICV. The results are to agree within 10% of the true value. This standard must be prepared from a different stock source than the calibration standard.

If the result is not within the control limit, terminate the analysis, correct the problem, and recalibrate the instrument. If this does not correct the problem, prepare a new stock standard and a new calibration standard and repeat the calibration.

12.3.5 Analyze the Initial Calibration Blank (ICB) following the ICV. The blank results must be below 1/2 RL.

If the result is not within the control limit, terminate the analysis, correct the problem, recalibrate, and reanalyze the previous 10 samples.

12.3.6 For continuing calibration verification (CCV), analyze an appropriate instrument check standard containing the elements of interest every 10 samples and at the end of the analytical sequence. This check standard is used to determine instrument drift. If agreement is not within 10% of the true values, the analysis is out of control. The analysis must be terminated, the problem corrected, the instrument re-calibrated, and the preceding 10 samples re-analyzed.

12.3.7 Analyze the Continuing Calibration Blank (CCB) every 10 samples. The blank results must be below the RL.

If the result is not within the control limit, terminate the analysis, correct the problem, recalibrate, and reanalyze the previous 10 samples.

12.3.8 To verify inter-element and background correction factors, analyze the interference check samples at the beginning of the sample run or a minimum of once per day, whichever is more frequent. Results should fall within 20% of the true value. For the analytes that are not present in the interference check samples, the results must be less than the reporting limit.

12.4 Sample Quality Control

12.4.1 Sample must be analyzed within six months from date of collection.

12.4.2 All sample analyses must use the average of at least three integrations.

12.4.3 Dilute and reanalyze samples with target analytes that exceed the linear calibration range. All measurements (both target analytes and constituents which interfere with the target analytes) need to be within the instrument linear range where the correction equations are valid.

NOTE: For samples with Ag exceeding the Linear Range, the sample must be redigested at a lower concentration due to the likelihood of Ag having precipitated out of solution.

12.4.4 Method Blank (MB) - An analyte-free matrix to which all reagents are added in the same volumes or proportions as used in sample preparation and analytical procedure. The method blank is used to document contamination resulting from the analytical process. Method blanks are run a frequency of 1 per batch of 20 samples.

For a method blank to be acceptable for use with the accompanying samples, the concentration in the blank of any analyte of concern should not be higher than the highest of either:

1) ½ the reporting limit, or

2) Project specific requirements for that analyte, or

3) Ten percent of the measured concentration in the sample.

If the method blank exceeds the criteria, but the sample concentrations are below the Reporting Limit, then the sample data may be used despite the contamination of the Method Blank.

12.4.5 Laboratory Control Sample and Laboratory Control Sample Duplicate (LCS and LCSD) - Each digestive batch must contain a LCS/LCSD pair. For aqueous samples, the LCS/LCSD must recover within 80-120%. For soil samples, the LCS/LCSD must recover

within the QC Performance Acceptance Limits specified on the Certified Reference Material data sheet. If the recovery is outside control limits the batch, including all associated samples, must be redigested and reanalyzed.

NOTE: If either the Method Blank or LCS cannot be considered aceeptable, the Method Blank or LCS should be reanalyzed once, and if still unacceptable, then all sample associated with the MB or LCS must be reprepped and reanalyzed.

12.4.5.1 If the RPD fails for both the Sample Duplicate and the MS/MSD pair, the batch can be accepted if the LCS/LCSD RPD is ≤20%. (See 12.4.6.3 and 12.4.7.2.)

12.4.6 Serial Dilution Analysis

12.4.6.1 For every sample matrix, a 1:5 serial dilution must be run with every batch. If the analyte concentration is sufficiently high (a factor of 5x above the Reporting Limit after dilution at a minimum) the serial dilution must be within 20% of the original determination. If not, a chemical or physical interference should be suspected.

12.4.6.2 See section 10.6 in order to calculate the percent recovery for each serial dilution.

12.4.7 Matrix Spike/Matrix Spike Duplicate/Post Spike

12.4.7.1 At least one pre-digestion spiked sample analysis must be performed on each group of samples of a similar matrix type, for each batch of samples, or for each 20 samples received, whichever is more frequent. Samples identified as field blanks cannot be used for spiked sample analysis.

12.4.7.2 Spike the unspiked aliquot of the sample at a minimum level of 10x the IDL (maximum of 100x) or mid-range of the working analyte curve. If the spike is not recovered within the specified limits, a matrix effect should be suspected.

12.4.7.3 Soil and aqueous Matrix Spike recovery must be within 75-125% and the RSD must be ≤20%. If the matrix spike recovery does not fall within the acceptance limits, matrix effects may be suspected. If an MS/MSD pair does not confirm either high or low recoveries the data may be accepted on the basis of the LCS recoveries - since the MS/MSD recoveries are displaying matrix interference effects.

12.4.7.4 POST DIGESTION SPIKE – If the MS/MSD recoveries are unacceptable, the same sample from which the MS/MSD aliquots were prepped should be spiked with a post digestion spike. Add 0.2 ml of spiking solution (see Table 8) to 20 ml portion of sample. Otherwise, another sample from the same preparation batch should be used as an alternative. An analyte spike should be recovered within 75-125% of the known value. If both the MS/MSD and Post Digestion

Spike fail, then matrix effects are confirmed. See Table 7 for spiking concentrations.

12.4.8 Duplicate Sample Analysis

12.4.8.1 At least one duplicate sample must be analyzed from each group of samples of a similar matrix type, for each 20 samples received. The relative percent difference is to be within 20% or established control chart limits, whichever is less.

12.4.8.2 If RPD is not within limit of 20%, the results can be accepted on the basis of RPD between LCS/LCSD.

12.4.8.3 See section 8.6 in order to calculate the relative percent difference between replicates.

13.0 NONCONFORMANCE AND CORRECTIVE ACTION

13.1 Any deviation from this procedure must be documented on a nonconformance memo.

13.2 Quality control samples outside the specified acceptance criteria must be documented on a nonconformance memo.

14.0 RECORDS MANAGEMENT/DOCUMENTATION

14.1 All data and calculation sheets, including QA\QC documentation, must be initialed and dated by the analyst.

14.2 These sheets must then be reviewed according to standard review policies. Upon satisfactory completion of review, as indicated by the Supervisor's or their designee signature, original sheets are to be retained by the Laboratory Supervisor in instrument-specific files. As necessary, these files will be indexed and archived.

14.3 Copies of data and calculation sheets and QC data will be submitted for QC review and final report preparation with completed Sample Routing Sheets. Final results will be entered into Aspen by the Laboratory Supervisor or his/her designee.

14.4 All analysis run logs, preparation logs, standard preparation logs and material procurement logs shall be maintained in the Metals Laboratory. As archival becomes necessary, all records shall be indexed and filed.

15.0 POLLUTION PREVENTION

15.1 The chemicals needed for these analyses are purchased as needed, therefore eliminating the disposal of unused expired standards.

15.2 The sample bottles provided are appropriate to obtain a representative sample, but limit the amount of sample required for disposal.

16.0 WASTE MANAGEMENT

16.1 Samples and chemicals are disposed of following the procedures outlined in SOP 7003 (Sample Storage and Disposal).

16.1.1 All samples and chemicals are collected in a 55 gallon drum. After retaining a large amount, the waste is pH adjusted to ≥5 units and the waste is disposed in the sanitary sewer with copious amounts of water.

17.0 ESTIMATION OF UNCERTAINTY OF MEASUREMENT

17.1 Refer to SOP No. 1013 for calculation of estimation of uncertainty associated with an analytical result. The calculated estimation of uncertainty for this method is listed below:

Aqueous

% Recovery	Mean X	S	SD2	SD3	RSD	Element
95	94.4	2.81724016	5.63448032	8.45172047	0.02984365	Aluminum

Vanadium	292.402	--	--	0.05	--	0.005	--	--	--	0.02	--
Zinc	213.856	--	--	--	0.14	--	--	--	0.29	--	--

[a] Dashes indicate that no interference was observed even when interferants were introduced at the following level:
Al, Ca, Mg, Fe, at - 1000 Mg/L.
Mn, Cr, Tl, V, Cu, at – 200 Mg/L.

[b] The figures recorded as analyte concentrations are not the actual observed concentration: To obtain those figures , add the listed concentration to the interferant figure.

[c] Interferences will be affected by background choice and other interferences may be present.

TABLE 5 - SPECIFIED CONTROL LIMITS

LRS	**± 10%**
ICS-2	**± 20%**
ICS-3	**± 10%**
ICV	**± 10%**
ICB	**< ½ RL**
ICSA	**80 - 120% (Interferents) &**
	± <RL (all others)
CCV	**± 10%**
CCB	**< RL**

ICS-2, ICS-3, ICV, ICB and ICSA, - If the calibration cannot be verified within the specified limits, terminate the analysis, correct the problem and recalibrate the instrument.

CCV AND CCB - If the calibration cannot be verified within the specified limits, reanalyze both the CCV and CCB. If the second analysis is outside the control limits, re-calibrate the instrument and reanalyze all of the samples which followed the last acceptable CCV and CCB.

Ca	50 ppm		Mo	0.5 ppm		Zn	0.5 ppm
Cd	0.5 ppm		Na	50 ppm		Si	0.5 ppm

REVISION LOG SOP 4216B

	Rev. #	Initials	SECTION	REVISION
1/17/2019	1	RC	12.1.7	Updated the mean recovery to 35% from 30%. Also added that a single quarterly verification is required, not 7.
03/11/19	2	SRB	12.1.7	clarified quarterly verification method.
04/24/19	3	SRB	12.3.7	CCB limit changed from 1/2 RL to RL
	3	SRB	12.4.4.1	added RPD requirement to LCS section
	3	SRB	throughout	edited for punctuation, formatting
04/25/19	3	SRB	TOC	page numbers corrected
06/13/19	4	EJ	8.6, 8.7, 8.9	corrected Table 7 to Table 6
			8.12	corrected Table 8 to Table 7
			8.16	corrected spelling of Deionized water
			12.1.7	corrected spelling of detection
06/14/19	4	SRB	12.8	inserted 12.8.2: 3 rep requirement, renumbered 12.8.3 to 12.8.8
			12.3.8	replaced ICSA minimum of 2 per 8 hour with once per day
			8.6.3, 12.3.2	specified ICS-2 is equal to RL
			8.9	changed "or more frequently if required" to "... if desired"
			8.6.1	deleted reference to Table 2
			Table 6	updated to reflect current lab practice
			TOC	page numbers corrected
			8.11.1	corrected Table 3 to Table 4
06/20/19	4	SRB	12.1.5	updated MDL to new procedure
			12.3.3	added what to do if LRS fails, replaced "must" with "may"

SOP No.: 4207A

DETERMINATION OF MERCURY IN SOILS/SEDIMENTS (SHW) SAMPLES USING THE MANUAL COLD VAPOR TECHNIQUE (7471B)

1.0 PURPOSE AND APPLICATION

1.1 This procedure measures total mercury (organic and inorganic) in soils, sediments, bottom deposits and sludges. All Samples must be subjected to an appropriate dissolution step prior to analysis. The Reporting Limit for soil samples is 0.0835 mg/kg or 0.5 ug/L in the digested solution.

2.0 REFERENCES

2.1 Test Methods for Evaluating Solid Waste, Physical/Chemical Methods, SW-846, Fourth Edition, Revision2, February 2007, Method 7471B.

2.2 Hampton Clarke Quality Assurance Manual, Current Revision.

3.0 METHOD SUMMARY

3.1 The flameless aa procedure is a physical method based on the absorption of radiation at 253.7 nm by mercury vapor. The mercury is reduced to the elemental state and aerated from solution in a closed system. The mercury vapor passes through a cell positioned in the light path of an atomic absorption spectrophotometer. Absorbance (peak height) is measured as a function of mercury concentration and recorded.

3.2 A weighed portion of the sample is digested in acid for 2 minutes at 95°C, followed by oxidation with potassium permanganate. Mercury in the digested sample is measured by the cold vapor technique.

4.0 SAMPLE COLLECTION, PRESERVATION AND STORAGE

4.1 Samples should be collected in 2-ounce glass jars. This volume will be sufficient to insure a representative sample, allow for replicate analysis, if required, and minimize waste disposal. If additional tests are being requested an 8 ounce jar is used.

4.2 Holding time is 28 days from date of collection.

4.3 Refrigerate samples at 4°c (± 2°C) upon receipt until analysis.

5.0 SAFETY

5.1 Handle all chemicals appropriately.

5.2 Mercury compounds are highly toxic, therefore the appropriate apparel should be worn when performing this test, this includes: laboratory coat, safety glasses, and gloves.

5.3 Due to the possible release of toxic gases, acidification of the samples should be performed under a fume hood.

6.0 INTERFERENCES

6.1 Potassium permanganate is added to eliminate possible interference from sulfide. Concentrations as high as 20 mg/l of sulfide as sodium sulfide do not interfere with the recovery of added inorganic mercury from reagent water.

6.2 Copper has also been reported to interfere; however, copper concentrations as high as 10 mg/l had no effect on recovery of mercury from spiked samples.

6.3 Samples high in chlorides require additional permanganate, because during the oxidation step, chlorides are converted to free chlorine, which also absorbs radiation of 253 nm. Therefore care must be taken to ensure that any free chlorine is removed before the mercury is reduced and swept into the cell.

7.0 REQUIRED EQUIPMENT

7.1 Atomic absorption spectrometer: any atomic absorption spectrometer, which has an open sample compartment in which to mount the quartz cell. Instrument settings recommended by the manufacturer should be used. A background correction system is desirable but not necessary.

7.2 Radiation source for the determination of mercury, such as a hollow cathode lamp or electrode less discharge lamp.

7.3 Recording device: any recorder which is compatible with the spectrometer is suitable. Any atomic absorption spectrometer, which can print spectral peaks, is suitable.

7.4 All apparatus required for sample digestion described in procedures, including a block digestor capable of maintaining a temperature of 95°C.

7.5 Flow injection system consisting of:

7.5.1 Auto sampler with random access capabilities.

7.5.2 Peristaltic pumps: Pump controls the delivery of sample and the delivery of the reductant and acid carrier stream.

7.5.3 Switching Valve: Multiport valve used for injecting discrete sample volumes, determined by sample loop size, into a hydrochloric acid carrier stream. The carrier stream transports the sample volume to the chemifold.

7.5.4 Chemifold: Manifold where the sample, reductant and argon are merged and mixed thoroughly. (Figure 2)

7.5.5 Gas/liquid separator.

7.5.6 Flow meter: Capable of measuring flows of 0-250 mL/min.

7.5.7 Quartz Cell: Absorption cell consisting of a quartz cell 14 cm in length, i.e. = 7mm, with quartz end windows. The cell is positioned in the path of the light beam.

7.6 50ml Digestion Tubes

7.7 Block Digester, capable of maintaining sample temperature @ 95°C.

8.0 STANDARDS AND REAGENTS

8.1 Reagent water: deionized water from millipore system, conductivity < 2.0 umhos/cm

8.2 Nitric acid, conc.: reagent grade.

8.3 Hydrochloric acid, conc.: reagent grade.

8.4 3% HCl: 300 ml conc. HCl in 10l of di water.

8.5 Aqua regia: prepare immediately before use by carefully combining 3 parts conc. HCl and 1 part conc. HNO_3.

8.6 Stannous chloride: dissolve 13.2 g of SNCL2 to 1 l of 3% HCl.

8.7 Sodium chloride-hydroxylamine hydrochloride solution: dissolve 1200 g of sodium chloride and 1200 g of hydroxylamine hydrochloride in deionized water and dilute to 10 liters. Hydroxylamine sulfate may be used in place of hydroxylamine hydrochloride.

8.8 Potassium permanganate, 5% solution, w/v: dissolve 1000 g of potassium permanganate in 20l of deionized water.

8.9 Stock mercury solutions: two stock solutions are acquired from two different approved manufacturers. These solutions arc certified by the manufacturer to be ± 1% of the stated concentration of 1000 mg/l. The initial and continuous calibration verification solutions are made up from a different stock solution than that of the calibration.

8.10 Mercury control intermediate standard (1mg/l) for icv and ccv: pipet 0.1ml of the stock mercury solution (8.9) and 2.5 mls of nitric acid into a 100ml flask containing to 90mls with di water. Dilute to 100ml with di water and mix. This working standard and the icv and ccv must be prepared fresh daily.

8.11 Mercury calibration intermediate solution (0.25 mg/l): pipet 125 ul of a stock mercury solution (8.9) and 12.5 mls of concentrated HNO3 into a 500ml volumetric flask containing 400 mls of di water. Dilute to 500ml with di water and mix. Prepare this solution from a different stock solution than (8.10). Prepare this solution fresh daily.

8.12 Laboratory control sample (soil) – purchased from era, cat# 540.

9.0 PROCEDURE (BLOCK DIGESTION)

Standard Preparation:

9.1 Calibration standards: The instrument is calibrated with the following points: 0, 0.2, 0.5, 1.0, 2.0, 5.0, 10.0 and 25 ug/L. Transfer 0, 0.02, 0.05, 0.10, 0.20, 0.50, 1.0 and 2.5 ml aliquots of the mercury intermediate standard ii (8.11) to a series of 50ml plastic digestion tubes.

9.2 Check standards: Prepare an ICV and CCV by pipeting 0.5mls and 0.25mls respectively of the mercury intermediate stock solution (8.10) to 50 ml digestion tubes.

Sample Preparation :

9.3 Weigh 0.15 g portions of the sample, and place in bottom of a 50ml plastic digestion tubes

9.4 Weigh 0.15 g portions of the solid LCS and LCSD, and place in bottom of a 50ml plastic digestion tubes

9.5 To the sample tube designated as the Matrix Spike and Matrix spike duplicate, add 0.25 ml of the Mercury control intermediate standard.

Sample and Standard Digestion Procedure:

9.6 To all the digestion tubes, add 1.25 ml of reagent water and 1.25 ml of aqua regia. Heat for 2 minutes in a digestion block at 95°C ± 3°.

9.7 Cool, add 12.5 ml reagent water and 3.75 ml potassium permanganate solution to each sample bottle except the for the ICV, STD 5.0, STD 10.0 and STD 25.0. For the previous four standards, reduce the volume of reagent water by the spike amount added to ensure all final volumes are equal: See below for volume to be added:

Standard	Reagent water (ml)
ICV/Std 5.0	12.0
Std 10.0	11.5
Std 25.0	10.0

9.8 . Let stand at least 15 minutes. Mix thoroughly and place in a digestion block for 30 minutes at 95°C ± 3°.

Note: If necessary, add additional portions of potassium permanganate crystals until purple color persists for atleast 15 minutes.

9.9 Cool and add 1.5 ml of sodium chloride-hydroxylamine hydrochloride to reduce the excess permanganate. Add **13.75** ml reagent water.

10.0 Analysis with Perkin Elmer Software

10.1 Starting AA Winlab Analyst

10.2 Double click on the **Start** button on the windows menu bar.

10.3 Select **Programs**, which displays all available programs in the start menu.

10.4 Select **FIMS** from the Program menu.

10.5 From the FIMS menu select **AA WINLAB ANALYST** .

10.6 Ensure that the FIMS power switch has been flipped to the ON position and that the cooling fan located at the rear of the FIMS case is rotating.

10.7 Opening Menu Options

10.8 Once the AAWinlab software has initiated a window will appear displaying five options will appear. From these options different areas of the AA Winlab software may be accessed quickly without the need of accessing the main tool bar.

10.8.1 **Use custom designed workspace**. Select this button to select from a list of preprogrammed workspaces for either automated or manual analysis.

10.8.2 **Use Basic Procedures for performing Automated Analysis** – Use this option in the event an automated analysis is desired, and the analyst wishes to configure the FIMS work space the automated analysis will use.

10.8.3 **Use Basic Procedures to perform Manual analysis** – This option is used when the analyst desires to use the instrument with out the auto sampler services and using the manual analysis software.

10.8.4 **Technique Bar** – This Bar is used to select which atomic spectroscopy technique the analyst wishes to access. ***Note** : *When the system is configured for COLD VAPOR only, the Flow Injected Mercury Hydride option will be the only option offered.*

10.8.5 **Tutorials and Reference** - For tutorial on the instrument.

10.8.6 **Tool Bars** – Access this button to enter the main portion of the PE software with out the benefit of quick access buttons (1-3).

10.9 In most cases click on **Use Custom workspace**, and select workspace **Auto2.fms** from the displayed list of workspaces. This will display three windows, which are used for monitoring instrument operation. Across the top of the screen will be the concentration window displaying the sample designation, concentration and time of injection. In the lower left hand corner will be the Examine Curve Window, which displays the curve points as they are run and their linearity in relation to each other. On the lower right hand window is the display peak window, which graphically displays the concentration data in a wire frame format.

10.10 reating Sample Info Files

10.11 From the top menu bar select **FILE** and then **NEW**. From the popup window displayed select **Sample Info File**. The Sample Info File Editor is then displayed. The sample info file editor is used to create sample information files, which the software translates, into auto sampler positions and consequently controls the auto sampler. *Care should be given to the creation of these files for if the SIF is incorrect, the instrument will not analyze the samples in the correct order leading to erroneous results.*

10.12 The first field of the SIF editor is the Description field where the name by which the SIF file will be saved under is recorded. It is a usual convention that the Batch number generated by the metals supervisor is used when generating this field.

10.13 Under the Parameters Common to All headers is the information that will be displayed with the data when the run is sent to the printer. Of the five fields, Batch ID, Analyst, Sample Volume, Volume Units, Weight Units, only Batch ID and Analyst are used. The other fields are left blank and consequently the Winlab software will fill default values into the blanks. Batch ID is generally the same as description and analyst is filled by the initials of the technician operating the instrument.

10.14 Parameters that vary by Sample

10.14.1 This section of the SIF editor is divided into six columns, Auto sampler Position, Sample ID, Sample Eight, Sample Units, User Dilution and Remarks. Of these six columns the analyst routinely uses only the Sample ID column.

10.14.2 The Auto sampler position column is fixed and cannot be modified by the analyst.

10.14.3 The Sample ID column of the SIF editor is the location that sample identifiers are entered into the system.

10.14.4 Sample weight, units and dilution columns are available to modification by the analyst, however these columns are not generally used, and their function being covered by Envirosoft forms after the run is completed.

10.14.5 Remarks column is generally not used as what ever is entered in this column is printed with the data and tends to clutter and confuse it.

10.15 The first nine positions in the SIF file are reserved for the Curve and Controls, so each and every SIF file will begin on position 10 which conforms to the first small (15ml) sized tube position on the auto sampler tray F.

10.15.1 In auto sampler position 10, in the Sample ID column, the analyst will begin typing out the sample designations to be analyzed on the run. Typically the run will begin with a Method Blank, two Laboratory Control Samples, two Matrix Spike samples a Sample Duplicate then the actual sample after which the rest of the samples in the run will be listed.

10.15.2 After all samples have been typed into the SIF editor it is good practice to review the physical positions of the samples to their positions in the SIF. If everything is in agreement click on **FILE** on the top tool bar and select **Save** . A pop up window will appear where the analyst will be able to type in the designation under which the file should be saved; this designation should match the Description window and generally the Batch ID in the SIF editor.

10.16 Once the SIF editor has saved the SIF file just created, and all the information held with in the SIF file is to the analyst's satisfaction, Click on the X at the upper right hand corner of the SIF editor to close it.

10.17 Beginning Automated Analysis

10.18 Click on the **AUTOMATED ANALYSIS** window on the top tool bar, and the automated analysis window is displayed. From this window Analyses may be queued, started and stopped.

10.19 Two tabs exist on this windows, **Setup** and **Analyze**, select the Set up tab to enter parameters pertaining to the analysis about to be done or Analyze to begin the actual analysis.

10.20 When preparing to begin an analysis click on the **Setup Tab** , go to the **SELECT SAMPLE INFO FILE** field in the lower third of the Auto Analysis window and select the **BROWSE** button. This displays all saved SIF files, scroll through the list until the desired SIF file is found and click on it then the **OK** button just to the right of the window. When the window has closed the chosen SIF file designation should be displayed in the SELECT SAMPLE INFO FILE field.

10.21 Directly across from the SELECT SAMPLE INFO FILE field is the **Result Data Set Name** field, click on the **BROWSE** button located to the right of the text. This displays a list of already completed analysis, for a first time analysis a designation must be typed into the **RESULTS NAME** field located in the upper third of the Result Data Set Window. Once the designation has been entered click on the **OK** button to the right of the Window to save the designation to the results directory. The window closes automatically at this point and the designation just entered appears in the Result Name Field.

10.22 In the top third of the Auto Analysis Window double click on the first field directly beneath **METHOD**. This displays the Methods dialog where an appropriate method may choose to direct the instrument during the analysis.

Methods available are:
HGDW – Drinking Water
HgH2O – 600 Series Waters
HGSW846 H2O – SW846 Waters
HGTCLP – TCLP
HGSOIL – Soil and solid waste

10.23 Once a method has been chosen double click the **method** on the Methods Dialogue window and the dialogue window will close and the chosen method will appear in the Auto Analysis Window under Method. Ensure that the BOX located beneath USE ENTIRE SAMPLE INFO File is checked this allows the software to access the SIF file indicated in the SELECT SAMPLE INFO FILE field.

10.24 In the event that a SIF file is not to be used, auto sampler positions may be typed into the USE AUTOSAMPLE POSITIONS LISTED BELOW column of the automated analysis window. Enter the numbers always using two digits separated by a comma. Example: 09,10,11,12,13,ECT. The software will take Sample designations from a SIF file and enter them in the appropriate sample positions.

10.25 Next check the DURING ANALYSIS line of the Automated Analysis Window making sure that the **Save Data** and **Print Log** boxes are checked. *If these boxes are not checked, the data from the run will be lost!*

10.26 Click on the **Analysis** tab of the Auto Analysis Window displaying the Analysis console. From this console the FIMS instrument and AS-91 Auto sampler are controlled. Ensure that all reagent vessels are full; check argon pressure and space remaining in the waste container, if all are to the analysts' satisfaction the analysis may begin.

10.27 Instrument Preparation

10.28 When beginning an analysis allow 30 min for the radiation source (lamp) to warm up and stabilize.

10.29 Prepare the peristaltic pump for operation. The peristaltic pump is composed of a central spindle and four flexible tubes.

10.30 The Peristaltic Pump Tubing must be inspected for ware after each run to insure the proper flow of reagents to the Chemifold.

10.31 Replacement of the tubing on a daily basis is recommended, however after the analysis of extremely long runs or analysis of extremely corrosive samples the tubing may need earlier replacement.

10.32 The peristaltic pump tubing comes in various colors, blue and yellow, black and red.

10.33 It is important to remember that tubing sizes affect the rate of flow of reagents into and out of the FIMS. Proper care should be taken when changing the pump tubing to ensure their proper placement (See Fig. 1).

10.33.1 Black – Waste line emerging from the rear of the Liquid Gas separator, occupying the largest caliber pump magazine and located on the bottom rear position of the pump assembly.

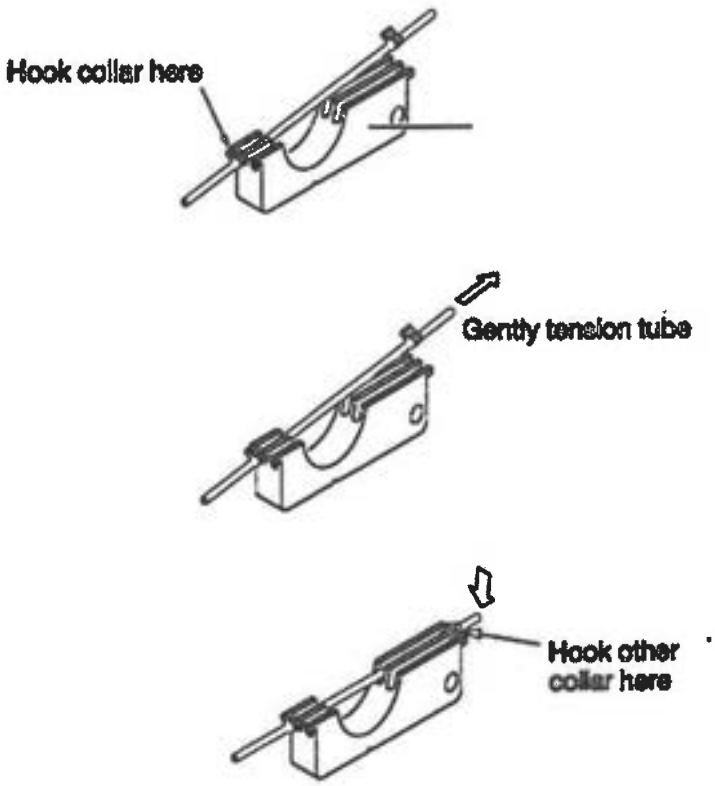
10.33.2 Red - Reductant feed line emerges from the second position of the Chemifold, occupying a standard pump magazine and is located on the top rear position of the pump assembly.

10.33.3 Blue and yellow

10.34 Carrier intake position (marked C) on top of the FIAS valve, occupies a standard pump magazine and is located on the top front location of the pump assembly.

10.35 Emerging from the Sample Waste port (marked S) on top of the FIAS valve occupies a standard pump magazine and is located on the bottom front location of the pump assembly.

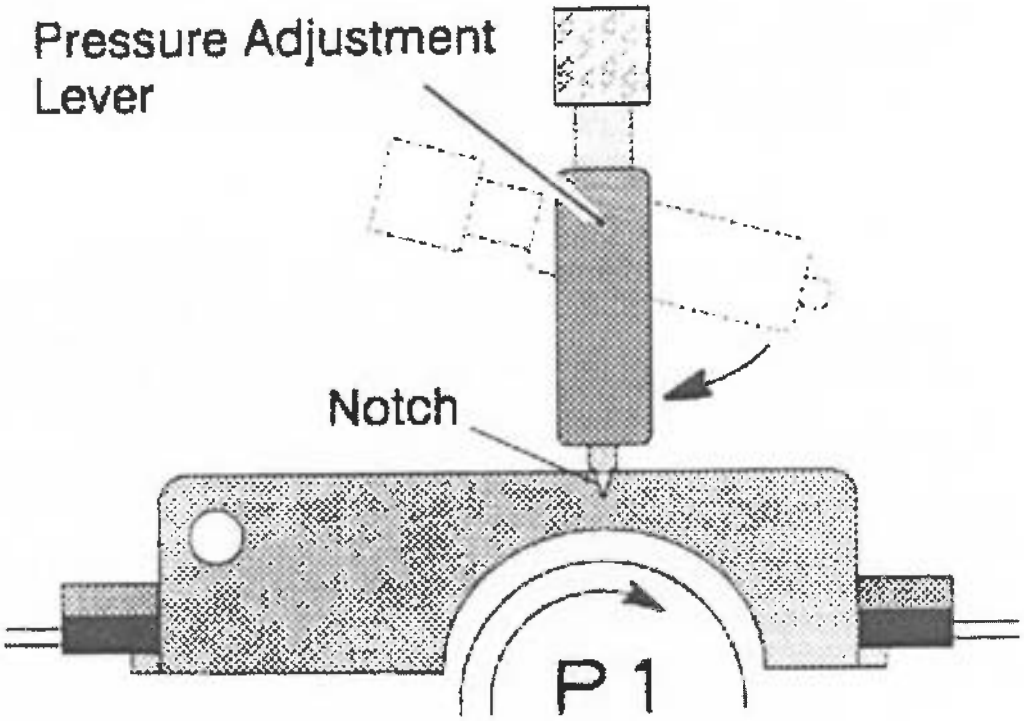
FIGURE 1



10.36 Starting the Peristaltic Pump

10.37 Once fresh tubing has been placed on the Instrument, swing the pressure adjustment lever (attached to the FIMS case) firmly into position. The adjustment lever will seat with a click when in the proper position. (See Fig. 2)

FIGURE 2



10.38 Insure that the pump magazine is properly seated then return to the PE Winlab software and click on the FIAS button on the top tool bar. This opens the FIAS window where the analyst can start and stop the peristaltic pump and change the position of the FIAS valve.

10.39 Click on the button just above the PUMP 1 designator to start the pumps. If the peristaltic pump fails to turn or emits a buzzing sound click on the PUMP 1 button again to stop the pump. *(A buzzing sound or failure to turn indicates an over pressure on the pump rotor. Check the pump magazines to ensure proper seating and placement.)*

10.40 If the pumps are started with out problem check tubing connections to ensure that reagent is flowing through the tubing. (By quickly unsealing a feed connection and resealing it a bubble is created which the analyst can use to gauge reagent flow).

10.40.1 If no reagent is flowing through the tubing ensure that the weighted end of the PTFE feed tubing is indeed in the reagent vessel and not blocked by any small particulate.

10.40.2 If the PTFE tubing is free of obstruction and submerged in the reagent vessel, gently apply pressure to the peristaltic pump magazine corresponding to the feed line. This gentle pressure will create a momentary stronger drawn in the tubing and effectively PRIME the feed line.

10.41 When reagent flow is satisfactory in both feed lines, the large waste tube should be bubbling at a Ratio of around 1 bubble per second to effectively drain the liquid gas separator.

10.41.1 If no bubbles appear, the liquid gas separator will begin to fill with fluid. (Never place the filter and cap on the Liquid Gas separator until the waste line of the pump has been primed.) This indicates that the waste line is not primed.

10.41.2 With gloved hands, place a finger firmly over the hole in the center of the liquid gas separator until the fluid trapped in the chamber is forced out and down the waste line. Repeat this action until the waste line begins to bubble and flow on its own. Allow the pump to continue turning once flow has been established.

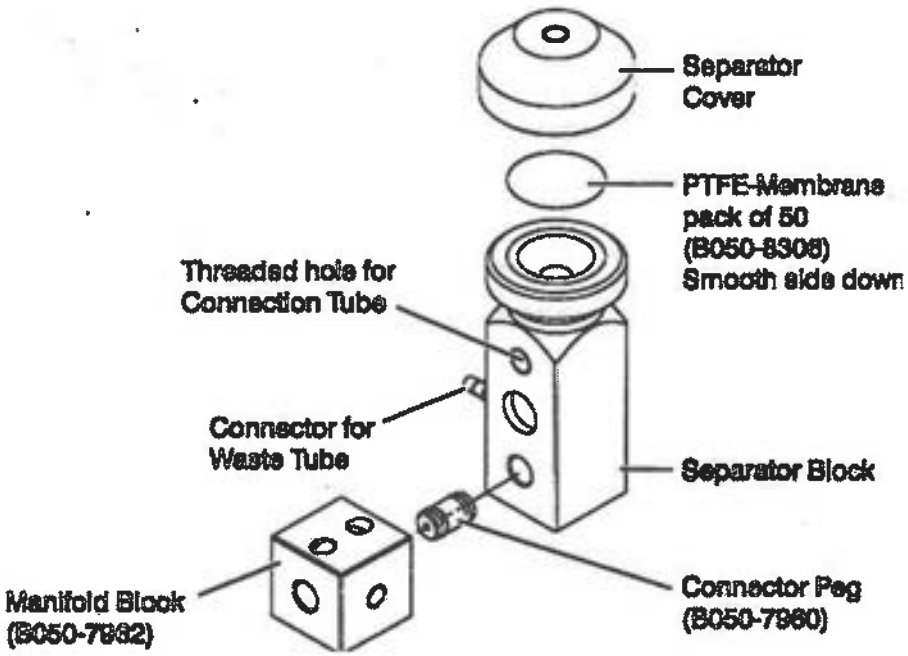
10.42 Repeat this process on the Sample Waste line. Allow the Sipper to be submerged in the wash cup located in the rear of Tray-F (wash cup should contain DI H2O), and click on the FIAS VALVE button located on the FIAS Control window. The FIAS valve on the front of the FIMS should turn to the left, click the button again and observe the sample waste tube, DI water should be flowing through the tube.

10.43 If no water is flowing through the tube, check the bottom of the sipper for blockages.

10.44 If no blockage is found gently press on the pump magazine corresponding to the sample waste tube until flow is established.

10.45 Place a TE 37 Membrane Filter on the top of the liquid gas separator. The filter will have a rough and a smooth side, place the smooth side of the filter down when seating. Once the filter is seated, place the threaded cap on top of the liquid gas separator and tighten making sure that the membrane filter stays in place. Seat and tighten the PTFE gas tube which connects the liquid gas separator and the FIMS cell inlet

FIGURE 3



10.46 The FIMS is now ready to analyze samples. Ensure that sample tray is firmly seated on top of the AS-91 Auto sampler and that the "sipper" is positioned correctly so as not to meet the bottom of the sample tubes during the analyses. (Allowing the tube to touch the bottom of the sample tubes could allow particulate matter precipitating from the samples to clog the sipper)

10.47 Starting the Autorun

10.47.1 Click on the **AUTO** button from the top tool menu, and select the **analysis** tab on the Auto Analysis window.

10.47.2 To begin an auto analysis click on **Analyze All** . This initiates the FIMS instrument the AS-91 Auto sampler and will cause the samples to be analyzed in the sequence recorded in the SIF file.

10.47.3 As per the method selected on the Auto Sampler page, the instrument will first attempt to calibrate itself, and then check the ICV/ ICB and CCV/CCB, and relative standard deviation between injections. If the curve or any of the check standards fail to meet the programmed criteria, the instrument will stop the run and display an error message.

10.47.4 If for any reason the run is stopped prematurely the instrument must be reset before continuing!

10.48 To reset the instrument click on the **Reset** button on the Auto Analysis window. This will cause the instrument to start from the beginning of the SIF file.

10.49 Clear the Print queue of the previous run by clicking on **File**, **Preview** and then on the wastebasket icon on the middle right of the screen.

10.50 An analyst must check the LCS, MS 's and RPD of the Sample and MR per the QC section.

10.51 Shutting down the instrument

10.51.1 Fill a 250ml Beaker with 5% HNO3 and place both feed tubes and sipper into the beaker.

10.51.2 Click on the FIAS button on the top tool bar, click on PUMP 1 button and allow all liquid to be removed from the beaker before adding 50ml DI water.

10.51.3 Allow all of the DI water to be removed from the beaker and run pump an extra minute to dry tubes before clicking on PUMP 1 button again to stop pump.

10.51.4 Relieve pressure from pump magazines and switch FIMS off.

10.52 If all analysis is complete select File menu from top tool bar and select exit. This will close the AA Winlab software.

11.0 CALCULATIONS

11.1 Read the mercury value directly from the standard curve. Dilution factors are applied as necessary.

11.2 Report mercury concentrations based on the dry weight of the sample, and convert to mg/kg dry weight. The sample result or the detection limit for each sample must be corrected for the sample weight and percent solids before reporting.

11.3 Individual component percent recoveries (p) are calculated as follows:

$$P = \frac{(S - U) * 100}{}$$

where, S = spiked sample conc. (mg/l)
U = unspiked sample conc. (mg/l)

T T = theoretical spike (mg/l)

11.4 The relative percent difference (RPD) for each component is calculated as follows:

$$RPD = \frac{|(F - G)| * 100}{(F + G) / 2}$$

where, F = original sample result
G = duplicate result

12.0 QUALITY CONTROL

12.1 A batch will be defined as a maximum of 20 samples of the same matrix type.

12.2 Each soil batch will include the following qc samples:

a) One method blank (MB).
25ml of DI water.
b) Two laboratory control samples (LCS/LCSD).
0.15g of a purchased soil quality control sample
c) Two matrix spikes (MS & MSD). (10 ppb)
0.25ml of Hg Intermediate Standard (8.10) in .15g of sample
d) One method replicate (MR).

12.3 A calibration curve must be run prior to sample analysis. A minimum correlation coefficient of 0.995 must be obtained to meet internal QC requirements. If the correlation coefficient of 0.995 is not met, a new calibration curve must be prepared and analyzed. An initial calibration verification (ICV) is analyzed immediately after standardization and must be ± 10% recovery of known true value. If the ICV fails, it may be re-analyzed one additional time. A second failure warrants corrective action, which includes, but not limited to recalibrating.

12.4 For each analytical sequence, a continuing calibration verification (CCV) and a continuing calibration blank (CCB) are analyzed every 10 analytical samples. Continuing calibration verification must be within a ± 10% recovery of known true value. The continuing calibration blank must be less than the RL. If the CCV fails, the samples analyzed prior must be reanalyzed.

12.5 For each sample batch, a matrix spike/matrix spike duplicate pair is analyzed every 20 samples. Limits for the matrix spike recovery are 80-120% or as established by control chart data.

12.6 Duplicate digestions must agree within 20% or within limits established by control chart data. A duplicate sample is analyzed every 20 samples.

12.7 The instrument detection limit determination is performed on an annual basis.

12.8 For a method blank to be acceptable for use with the accompanying samples, the concentration in the blank of any analyte of concern should not be higher than the highest of either:

12.8.1 the RL, or

12.8.2 5% of the regulatory limit for that analyte, or

12.8.3 10% of the measured concentration in the sample.

12.9The LCS/LCSD duplicate pair must be run with every 20 samples. Recovery must fall within the QC Performance Acceptance Limits set by the vendor. If the recovery falls outside the vendor limit, all samples associated with that set must be reprepped and reanalyzed. For calculation purposes, the "Certified Value" listed on the COA is used for the LCS True Value.

12.10 It is imperative to protect the samples from extraneous mercury contamination.

12.11 Reporting Limit (RL) – The reporting limit is the level at which a hit for an analyte is reported. Any concentration below the RL is reported as ND. The RL is greater than the MDL but less than or equal to the regulatory limit.

12.12 Measure of Uncertainty – Precision and Accuracy is calculated for this method.

13.0 NONCONFORMANCE AND CORRECTIVE ACTION

13.1 Any deviation from this procedure must be documented on a nonconformance memo.

13.2 Quality control samples outside the specified acceptance criteria stated in sections 12.1 to 12.10 must be documented on a nonconformance memo.

14.0 RECORD MANAGEMENT/DOCUMENTATION

14.1 All raw data associated with a particular sample is maintained in the batch folder. These folders are kept in the Metals lab in numerical order for a month and then removed to the warehouse for archiving.

15.0 POLLUTION PREVENTION

15.1 The chemicals needed for these analyses are purchased as needed, therefore eliminating the disposal of unused expired standards.

15.2 The sample bottles provided are appropriate to obtain a representative sample, but limit the amount of sample required for disposal.

16.0 WASTE MANAGEMENT

16.1 Samples and chemicals are disposed of following the procedures outlined in SOP 7003 (Sample Storage and Disposal).

16.1.1 All standards, reagents and samples are collected in a 55 gallon drum which is pH adjusted to be >/= 5 units. The drum is then disposed of in the sanitary sewer with copious amounts of water.

Analysis Of Base Neutral/Acid Extractable Compounds In Solid, Aqueous And Waste Matrices Using GC/MS (8270D)

1.0 PURPOSE AND APPLICATION

1.1 This method covers the determination of a number of semi-volatile organic compounds that are partitioned into an organic solvent and are then analyzed on a gas chromatography/mass spectrometer. This SOP may qualitatively and quantitatively determine the parameters listed in Table 1. This is a gas chromatographic/mass spectrometry (GC/MS) SOP and is applicable to the determination of the compounds listed in Table1 in ground water, soil, solid, oil, municipal waste and discharge waters by following 8270D methodology.

1.2 This SOP is restricted to use by or under the supervision of analysts experienced in the use of a Gas chromatograph/mass spectrometer and in the interpretation of mass spectra

2.4 DOD QSM v5.0

3.0 METHOD SUMMARY

3.1 Samples are extracted and prepared for analysis by GC/MS using the appropriate preparation procedure (see SOP #s 3000, 3001 or 3202).

3.2 An aliquot of the sample extract is injected into the gas chromatograph (GC) housing a capillary column. The GC is temperature programmed to separate the analytes, which are then detected with a mass spectrometer (MS).

3.3 Target analytes are identified by comparing their mass spectra with the spectra of standards. Quantition is performed by comparing the response of a specified major ion (quantitation ion) relative to an internal standard using an 8-point calibration.

4.0 INTERFERENCES

4.1 Solvents, reagents, glassware, and other sample processing hardware may yield artifacts and/or interferences to sample analysis. All these materials must be demonstrated to be free from interferences under the conditions of the analysis by analyzing method blanks. Specific selection of reagents and solvents may be necessary.

4.2 Interferences co extracted from the sample will vary considerable from source to source. If analysis of an extracted sample is prevented due to interferences, further cleanup of the sample extract may be necessary.

4.3 Phthalate esters contaminate many types of products commonly found in the laboratory. Plastics, in particular, must be avoided because phthalates are commonly used as plasticizers and are easily extracted from plastic materials. Serious phthalate contamination may occur at any time if consistent quality control is not practiced.

4.4 Matrix interferences may be caused by contaminants that are co extracted from the sample and/or emulsions may cause interference in the extraction of the compounds of interest.

4.5 Benzidine may be subject to losses during extraction and can exhibit poor chromatographic behavior.

4.6 Hexachlorocyclopentadiene is subject to photochemical decomposition in addition to thermal decomposition in the GC injection port.

4.7 N-Nitroso-di-phenylamine decomposes in the GC injection port and cannot be separated from Diphenylamine.

4.8 1,2-Diphenylhydrazine decomposes in the GC injection port and is detected as Azobenzene.

5.0 SAFETY

5.1 Each reagent and chemical used in this method should be regarded as a potential health hazard and exposure should be as low as reasonably achievable.

5.2 Always wear safety goggles, gloves and protective clothing (lab coat) when working with theses chemicals and reagents.

6.0 SAMPLE COLLECTION, PRESERVATION AND STORAGE

6.1 Aqueous samples must be extracted within 7 days from date of collection. Soil samples must be extracted within 14 days from date of collection.

6.2 Sample extracts must be analyzed within 40 days from date of extraction.

6.3 Refrigerate samples and extracts at 4°C (± 2°C) upon receipt until and after analysis

7.0 REQUIRED EQUIPMENT

7.1 GC/MS system:

7.1.1 Gas chromatograph – Agilent Gas chromatogram (Model 6890/7890) which is an analytical system complete with a temperature programmable gas chromatograph and all required accessories including syringes, analytical column, and gases. The injection port is designed for split/splitless injections for capillary columns.

7.1.2 Columns
7.1.2.1 Agilent J&W DB-5MS UI, 30 meter, 0.25 mm ID and 0.25 um phase
7.1.2.2 Agilent DB-UI 8270D 30m, 0.25 mm ID and 0.25 um phase
7.1.2.3 Agilent J&W DB-5MS UI, 20m, 0.180 mm ID and 0.18 um film

7.1.3 Agilent Mass Spectrometer (Model 5973/5975 – Capable of scanning from 35 to 500 amu every 7 seconds or less utilizing a 70V(nominal) electron energy in the electron impact ionization mode, and producing a mass spectrum which meets all the criteria in Table 6 when 25 ng of Decafluorotriphenyl phosphine is injected through the injection port.

7.1.4 GC/MS interface – The interface gives an acceptable calibration points at 25 ng per injection for each of the parameters of interest and achieves all acceptable performance criteria.

7.1.5 Data System - A computer system with EnviroQuant ChemStation G1701ea Version E.02.00 software is interfaced to the mass spectrometer that allows the continuous acquisition and storage on machine-readable media of all mass spectra obtained throughout the duration of the chromatographic program. The software allows searching any GC/MS data file for ions of a specified mass and plotting such abundance's versus time or scan number. This type of plot is defined as the Extracted Ion Current Profile (EICP). The software has the ability to integrate the abundance in any EICP between specified times or scan number limits.

7.1.6 Auto sampler –HP7673, 7683 and Agilent G4513A or equivalent; capable of injecting from 0.5 to 5 ul.

7.1.7 Analytical Balance, Mettler AE 200 Series

7.1.8 Stirrer, IKA. Model: Color SQUID, 1000rpm

7.1.9 Stirrer Bar, Fisher, Catalog# 1451393

8.0 STANDARDS AND REAGENTS

8.1 Store all intermediate standards at 4 degrees centigrade in a Teflon sealed glass container. Discard after 6 months or sooner if comparison with quality control checks standards indicates a problem or the manufacture states an earlier expiration date.

8.2 Stock standard solutions – Stock standard are purchased as certified stock standard solutions as neat and at various concentrations from Supelco and other vendors and are store at 4 degrees centigrade.

8.2.1 The following stock standards are used directly in the preparation of the calibration standards:

2000ppm TCL PAH Mix (Supelco 48905-U)
5000ppm Pest Mix
2000 ppm TCL Phenols/Benzidines Mix (Supelco 47992-U)
2000ppm TCL Haz. Subst. Mix (Supelco 47990-U)
2000ppm TCL BN Mix (Supelco47991-U)
1000ppm 8270 Mega Mix (Restek 31850)
2000ppm Benzoic Acid Mix (Restek 31879 or Supelco, CRM 47508)
2000ppm Benzidine & 3,3'-Dichlorobenzidene Mix (Restek 31030 or Supelco, 48906)

8.3 Prepare intermediate standards as follows:

8.3.1 Prepare a 10,000ppm 8270 EXTRA MIX#1 by weighing 0.1 gm of each of the following neat compounds into a clean 10ml volumetric half filled with Methylene chloride:

Diphenyl ether (Aldrich 240834)
1,2,4,5-Tetrachlorobenzene (Aldrich 131857-5G)
Acetophenone (Supelco 44-2438 or ChemService N-11020-1G)
Atrazine (Fluka, 45330-250mg-R)
Benzaldehyde (Aldrich B1334-5g)
Caprolactum (Aldrich C2204-5G or ChemService N11397-1G)
1,4-Dioxane (ChemService N-10220-1G)

Bring to volume with Methylene chloride, cap and invert mixture several times to mix.

8.3.2 Repeat the steps above to create a second source solution. Prepare a 10,000ppm 8270 EXTRA MIX#1 (Second Source) by weighing 0.1 gm of each of the following neat compounds into a clean 10ml volumetric half filled with Methylene chloride:

Diphenyl ether (Aldrich 240834)
1,2,4,5-Tetrachlorobenzene (Aldrich 131857-5G)
Acetophenone (Supelco 44-2438 or ChemService N-11020-1G)
Atrazine (Fluka, 45330-250mg-R)
Benzaldehyde (Aldrich B1334-5g)
Caprolactum (Aldrich C2204-5G or ChemService N11397-1G)
1,4-Dioxane (ChemService N-10220-1G)

Bring to volume with Methylene chloride, cap and invert mixture several times to mix.

8.3.3 Prepare a 10,000 ppm **Pyridine** standard by combining 10uL of neat (Fisher P368-500) and 990uL of Methylene chloride in a 2ml auto sampler vial.

8.3.4 Prepare a 5,000 ppm Pest Mix by Prepare by weighing 0.05gm of each of the following neat compounds into a clean 10ml volumetric flask.

4,4'-DDT (ChemService N-10876-100mg)
4,4'-DDD (ChemService N-10874-250mg)
4,4'-DDE (ChemService N-10875-100mg)

Bring to volume with Methylene chloride, cap and invert the mixture three times.

8.3.5 Prepare a 5000ppm BNA-7 Mix by weighing 0.05gm of the following neat compounds into a clean 10ml volumetric flask half filled with Methylene chloride:

Pentachloroethane (ChemService N-12829-1G)
n-Octadecane (ChemService N-12582-2G)
n-Decane (ChemService N-12526-1G)
Biphenyl (ChemService N-11207-1G)
1,4-Dimethylnaphthalene (Aldrich D170305-5G)
Coumarin (ChemService Cat# N-11508-1G)
3,4-Dichlorophenol (ChemService Cat# N-10766-1G)

Bring to volume with Methylene Chloride, cap and invert the mixture three times.

8.3.6 BNA-8-Mix: Repeat Section 8.3.4 a second time for the second source standard and add 0.05 gm of 2,3,4,6-Tetrachlorophenol (ChemService N-10599-50mg) to the mixture.

8.3.7 Surrogate standard spiking solution - Prepare a surrogate spiking solution:

Using1L volumetric flask half filled with Acetone and a clean stir bar, add the following neat compounds:

1gm **2-Fluourobiphenyl** (Aldrich 102741-10G)
1gm **Terphenyl-d14** (Sigma-Aldrich 364630-500mg)
2gm **Phenol-d5** (Sigma-Aldrich 425370-5G)
2gm **2,4,6-Tribromophenol** (Sigma-Aldrich 137715-5G)
800uL **Nitrobenzene-d5** (Aldrich 151955-5G)
1.6mL **2-Fluorophenol** (Aldrich F12804-10G)

Place mixture on a stirring plate until dissolved. Remove the stirring bar and bring up to volume with Methylene chloride. Cap and invert the mixture 2 to 3 times. Transfer the standard to 40ml vials and store in the refrigerator.

The final concentration for the BN surrogates is 1000ppm and the ACID surrogates are 2000ppm.

8.4 Internal Standard spiking solution (2000PPM) – Weigh 0.5 grams of the following neat compounds and transfer to a 250mL volumetric flask:

1,4-Dichlorobenzene-d4 (CIL DLM-268-5)
Naphthalene-d8 (CIL DLM-365)
Acenaphthene-d10 (CIL CLM-108-1)
Phenanthrene-d10 (CIL DLM-371-1)
Chrysene-d12 (CIL DLM-261-1)
Perylene-d12 (CIL DLM-366-1)
1,4-Dioxane-d8 (CIL DLM-28-5)

Bring to volume with Methylene chloride. Cap the flask and invert the mixture 2 to 3 times. Transfer the standard to 40ml vials and store in the refrigerator.

A 20 uL of this added to 1 mL of extract will create a concentration of 40 ug/ml.

8.5 Prepare a 10,000PPM 1-Methylnapthalene standard (Sigma Aldrich 245795-250mg) by weighning out 0.25g into a clean 25ml volumetric flask half filled with Methylene Chloride. Bring to volume with Methylene Chloride, cap it and invert the flask several times to mix.

8.6 DFTPP (Decafluorotriphenyl phosphine) standard(2000PPM). To a 10ml volumetric flask half filled with Methylene chloride, add 0.02 g of DFTPP neat, dissolved and bring up to the 10ml.

8.7 DFTPP (Decafluorotriphenyl phosphine) standard. Prepare a 50 ug/mL solution of DFTPP by adding the following to a 2ml vial: 50ul of DFTPP STD. (Sec. 8.6), 100ul TCL PHENOLS/BENZIDINE MIX, 400ul DDT/ENDRIN MIX, 1450ul Methylene chloride. Cap the vial and invert 2 to 3 times.

8.8 Intermediate/BNA Stock Std A (varied conc): To a 2ml vial add 300uL of 8270 Mega Mix, 60uL BNA Pest Mix (5000ppm), 150uL Benzoic acid Mix (2000ppm), 150uL Benzidine & 3,3'-

Dichlorobenzidine Mix (2000ppm), 60uL BNA-7-Mix (5000ppm), 150uL BNA Surrogate (1000/2000ppm), and 270uL of Methylene chloride.

8.8.1 Prepare BNA STOCK Std, a 200ppm (varied conc) by adding to a 1ml vial, 90uL of Methylene chloride, 10uL of 8270 EXTRA MIX#1 (Section 8.3.1), 400uL of 250ppm BNA STOCK Std A (Section 8.8). Mix by inverting three times.

8.8.2 Use this 200ppm standard to prepare 8 calibration levels using 300uL vials as follows:

	196ppm	**160ppm**	**120ppm**	**80ppm**	**50ppm**	**20ppm**	**10ppm**	**2ppm***	**0.5ppm**
200ppm interm Cal std	100uL	80uL	60uL	40uL	50uL	10uL	5uL		1uL (50ppm)
2000ppm ISTD	2uL	2uL	2uL	2uL	4uL	2uL	2uL		2uL (50ppm)
Methylene Chloride	-------	18uL	38uL	58uL	146uL	88uL	93uL		97uL
FV	102uL	100uL	100uL	100uL	200uL	100uL	100uL		100uL

***see Section 8.8.3.1**

8.8.3 Prepare another 50ppm BNA Std by combining 75uL of Methylene chloride and 25uL of the BNA Stock (200ppm) in a 300uL vial.

8.8.3.1 Prepare an 8th calibration standard at 2ppm by combining 94uL of Methylene chloride, 4uL of the 50ppm BNA Standard from Section 8.8.3 and 2uL of Internal Standard (2000ppm).

8.9 ICV (Initial Calibration Verification) Standard: The standard used for the ICV standard is from a second source or separate lot standard.

8.9.1 Prepare a 250ppm(varied conc) BNA Stock Std B in a 2ml vial by adding 150uL of 2000ppm TCL PAH Mix (Supelco CRM 48905-U), 60uL of 5000ppm BNA-8 Mix (Section 8.3.5), 30uL of 10,000ppm Pyridine Std (Section 8.3.2), 150uL BNA Surrogate (1000/2000ppm), 150uL of 2000ppm TCLP Phenols/Benzidines Mix (Supelco 47992-U), 150uL of 2000ppm TCL Base Neutrals Mix (Supelco 47991-U), 150uL of 2000ppm TCL Hazardous Substance Mix (Supelco 47990-U) and 360uL of Methylene chloride. Cap and invert the mixture three times.

8.9.2 Prepare a 50ppm second source standard by combining 40uL of BNA Stock Std B (Section 8.9.1), 4uL of BNA Internal Standard, 1ul of 8270 Extra Mix #1 (second source), 1uL of 1-Methylnaphthalene (section 8.5) and 154uL of Methylene chloride. Mix by inverting two to three times.

8.10 Separate calibration standards are prepared for the following compounds:

o-Toluidine
2-Ethylaniilne
2,4-Dimethylaniline
3,4-Dimethylaniline
2,3-Dimethylaniline
2,4,5-Trimethylaniline
4-Chloro-o-toluidine
2-Aminonaphthalene

8.10.1 Prepare a 200ppm working Custom Standard by combining 100uL of BNA surrogate (Section 8.3.6), 100uL of Custom SVOC Standard (Accustandard S-20990) and 800uL of Methylene chloride. Invert mixture three times to mix.

8.10.2 Prepare a 200ppm second source working ICV custom standard by combining 100uL of BNA surrogate (Section 8.3.6), 100uL of Custom second source SVOC standard (Accustandard S-20990, different lot from Section 8.10.1) and 800uL of Methylene chloride.

8.10.2.1 Prepare calibration standards using the working standard in Section 8.10.1:

8.10.3 Prepare another 50ppm BN standard by combining 75uL of Methylene chloride and 25uL of the 200ppm Custom Standard Mix (Section 8.10.1) in a 300uL vial.

8.10.4 Prepare an 8th calibration standard at 2ppm by combining 94uL of Methylene chloride, 4uL of the 50ppm BN standard mix from Section 8.10.3 and 2uL of Internal Standard (2000ppm).

	196ppm	**160ppm**	**120ppm**	**80ppm**	**50ppm**	**20ppm**	**10ppm**	**2ppm**
200ppm custom Cal std	98uL	80uL	60uL	40uL	100uL	10uL	5uL	*
2000ppm ISTD	2uL	2uL	2uL	2uL	8uL	2uL	2uL	*
Methylene Chloride	-	18uL	38uL	58uL	292uL	88uL	93uL	*
FINAL VOLUME	100uL	100uL	100uL	100uL	400uL	100uL	100uL	*

* - See Section 8.10.4

8.10.5Prepare a 50ppm second source standard by combining 50uL of the second source working standard (Section 8.10.6.2), 4uL of BNA Internal Standard (Section 8.4) and 146uL of Methylene chloride. Invert the mixture three times to mix.

NOTE: The initial calibration of these special compounds in Section 8.10 are analyzed only based on project specific basis.

8.11 The preparation of all standards must be documented immediately after preparation as follows: Locate a PC with the VeriProg icon. Double click on the VeriProg icon, select standards. You're your name then select create new standard (Internal standard prep log), Type in the name of each standard and the amount used. Print the label for the standard by clicking on print label. Exit out of the software. Place the label on the standard and store the standard in the refrigerator for daily use.

9.0 PROCEDURE FOR INITIAL CALIBRATION

9.1 Establish the GC/MS operating parameters for each instrument for the analysis of the tune standard (DFTPP), calibration and samples. Once the parameters are set, they must be saved. The same parameters must be used for tuning, calibration and sample. Operating parameters for each instrument vary slightly. Follow the manufacture manual to properly tune and save the tune method for each instrument.

9.2 Set up the GC operating parameters. The GC acquisition parameters are as follows and may vary from instrument to instrument:

Mass range: 35-500 amu
Scan time: 1sec/scan
Initial temp: 50°C
Initial hold: 3 minutes
Initial rate: 35°C/minute
Second temp: 180°C
Second rate: 20°C/minute
Third temp: 325°C
Final hold: 2.5 – 3.0 minutes

Column Flow: 1 mL/minute helium
Injection volume: 0.50ul for calibration/sample/ DFTPP
Injector: split
Injection port: 250 °C
Transfer line: 280 °C
Source Temp: 250 °C

9.3 Set up the MS operating parameters as follows: From the instrument control, select MS and choose the tune file. Select on the MS again and click on Edit MS SIM/SCAN, on the Acq Mode, select SCAN. Save the run method together with the operating parameters.

9.4 Daily GC/MS Performance - At the beginning of each day when analysis will be performed, inject a 50 ng of DFTPP standard solution.

9.4.1 Load the DFTPP and calibration standard vials on the auto sampler tray and place on the instrument. Use the PC that is connected to the instrument and ChemStation software (see SOP 6012) to initiate analysis.

9.4.2 Once the run analysis is completed for the DFTPP, using the ChemStation software evaluate the DFTPP to screen. Confirm that all ions meet the acceptance criteria in Table 6. If criteria are not met the following approaches are acceptable to evaluate the DFTPP:

- Evaluate one scan immediately preceding or following the apex.
- Evaluate the average scans of the apex, the scan immediately before and after the apex.
- Evaluate the average of 3 or more scans within the DFTPP peak.

Background subtraction of a scan prior to the elution of DFTPP is acceptable.

9.4.2.1 If the criteria in Table 6 cannot be met using one of the above approaches, the analyst may reinject another DFTPP or retune the mass spectrometer and repeat until all criteria are met in Table 6.

9.4.3 Once the criteria in Table 3 are achieved, The DDT breakdown must be evaluated. The DDT breakdown must not exceed 20%. If the breakdown exceeds 20%, maintenance of the injection port may be needed.

9.4.4 The Benzidine and Pentachlorophenol tailing factors must be calculated. The DFTPP injection contains 100 ng of Benzidine and 100 ng of Pentachlorophenol. Identify and integrate the Benzidine and the Pentachlorophenol peaks. Verify all tailing criteria have been met. The Benzidine and Pentachlorophenol tailing factor must be less than 2.

9.4.5 If either of the tailing factor criteria cannot be met then the following should be performed: Try replacing the injector port liner and cutting 20 cm of column first. If this fails to solve the problem, then cut off a meter of column. If that fails to work, then replace the entire column.

9.4.6 The performance criteria in Sections 9.4 - 9.5 must be met before any samples, blanks or standards can be analyzed. All samples blanks and standards must be injected within 12 hours of the injection time of a DFTPP standard that meets the criteria in Table 6.

9.5 After all criteria are met, inject 0.5uL of each of the eight calibration standards prepared in Section 8.0. Once the analysis of the eight-point calibration standard is complete, process and edit each file and make sure each compound is properly identified then update the curve by using the EnviroQuant Software.

9.5.1 Once the initial calibration is updated, print the initial calibration standard form6 and the run log and make sure all criteria are met as follows:

9.5.1.1 Verify the areas of each internal standard within the calibration curve must be 50-100% of the mid level standard.

9.5.1.2 Verify the minimum response factor for each compound (at each calibration level) listed in Table 2 is met.

9.5.1.3 If the RSD of any target analyte is 20% or less, then the relative response factor is assumed to be constant over the calibration range, and the average relative response factor may be used for quantitation. If the RSD of any target analyte is greater than 20%, than a non-linear calibration technique is employed .

9.5.1.3.1 Creation/Curve Fitting of the Calibration Curve - The statistical considerations in developing a non-linear calibration model require more data than the more traditional linear approaches described above. Whereas the linear calibration method employs five standards for a linear (first order) calibration model, a quadratic (second order) model requires six standards, and a third order polynomial requires seven standards.

9.5.1.3.2 Most curve fitting programs will use some form of least squares minimization to adjust the coefficients of the polynomial to obtain the polynomial that best fits the data. The "goodness of fit" of the polynomial equation is evaluated by calculating the weighted coefficient of the determination (COD).

$$\frac{\sum_{i=1}^{n} (y_{obs} - \bar{y})^2 - \frac{(n-1)}{(n-p)} \sum_{i=1}^{n} (y_{obs} - Y_i)^2}{\sum_{i=1}^{n} (y_{obs} - \bar{y})^2} = COD$$

where,

$\bar{y}$ = Mean observed response from the initial calibration
y_{obs} = Observed response (area) for each concentration from each initial calibration standard
Y_i = Calculated (or predicted) response at each concentration from the initial calibration(s)

n = Total number of calibration points (i.e., 6 for a quadratic model; 7 for a third order model)

p = Number of adjustable parameters in the polynomial equation (i.e., 3 for a third order; 2 for a second order polynomial)

9.5.1.3.3 Under ideal conditions, with a "perfect" fit of the model to the data, the coefficient of the determination will equal 1.0. In order to be an acceptable non-linear calibration, the COD must be greater than or equal to 0.99.

NOTE: For those compounds that do not meet the 20% RSD or the minimum RF requirements, the calibration curve may still be acceptable but the sample results must be reported as estimated. The average RF should not be used for compounds that have an RSD greater than 20% unless the concentration is reported as an estimated.

In addition, if more than 10% of the compounds exceed the 20% RSD limit and do not meet the minimum correlation coefficent (0.99) for alternate curve fits, then corrective action is warrnted and a new initial calibration must be performed

9.5.1.3.4 When calculating the calibration curve using linear regression, a minimum quantitation check on the viability of the lowest calibration standard must be performed by re-fitting the response from the low calibratin standard back into the curve achieved by having the software requantitate the concentrations as if it were a sample. The recalculated concentration must be within + or – 30% of the standards true concentration. Compounds that do not meet these criteria warrant corrective action such as changing the concentration of the low standard or reporting those compounds as estimated when the concentration is at or near the lowest calibration point.

9.6 Initial Calibration Verification

9.6.1 Once an acceptable DFTPP and initial calibration has been acquired, analyze a 50ppm second source calibration standard as prepared in Section 8.9. The recovery of each compound must fall within 70-130% recovery (50-150% for Pyridine, Benzaldehyde, Aniline, 4-Chloroaniline, Benzidine and 3,3'-Dichlorobenzidine). Up to 10% of the compounds may fall outside the 70-130% limits, but must fall within 60-140%. A single reanalysis of the ICV is allowed. If the reanalysis of the ICV still fails, corrective action must be taken and a new initial calibration analyzed.

NOTE: The ICV must be analyzed and meet criteria before the analysis of any samples.

9.7 Continuing Calibration - The working calibration curve must be verified every 12 hours by the analysis of the mid concentration standard. On a daily basis, follow the procedure outlined in Sec 9.4, followed by the analysis of the 50ppm standard. The 50ppm standard must be analyzed and verified before any sample can be analyzed.

9.7.1 Verify that the minimum response factor for each compound listed in Table 2 is met. If the minimum RFs are not met, the system must be evaluated and corrective action taken before any samples may be analyzed.

9.7.2 If the percent difference or drift for each compound is less than or equal to 20%, the initial calibration is assumed to be valid. In cases where compounds fail, they may still be reported as non-detects if it can be demonstrated that there was adequate sensitivity to detect the compound. For situations where the failed compound was present, the concentrations must be reported as estimated values.

9.7.3 If greater than 20% of the compounds fail the 20% difference or drift criteria, corrective action must be taken prior to analyzing samples.

9.7.4 Percent difference and percent drift formulae:

$$\% \text{ Difference} = \frac{RF - RF_v}{\overline{RF}} \times 100$$

$$\% \text{ Drift} = \frac{\text{Calculated concentration - Theoretical concentration}}{\text{Theoretical concentration}} \times 100$$

9.7.5 The area of the internal standards must be within 50-100% of the mid level standard from the initial calibration.

9.7.6 If these criteria (9.7.1 through 9.7.5) are not met then the std can be repeated once using fresh
calibration standard. If the problem still persists then a new calibration curve must be analyzed using the initial calibration criteria procedure.

9.8 When all criteria have been met follow sample procedure to continue with the analysis of blank, samples and QC for up to 12 hours from the DFTPP injection.

10.0 PROCEDURE FOR SAMPLE ANALYSIS

10.1 After all the criteria have been met for the initial calibration or the continuing calibration, inject 20 uL of the 2000 ppm internal standard mix into the 1ml or 10 uL of the internal standard to 0.5ml of each sample extract vial, method blank (MB), method blank spike (MBS), matrix spike (MS) and matrix spike duplicate (MSD). The final concentration of the internal standard in the vial is therefore 40

mg/L. In order to ensure proper mixing of the internal standard in the extract vial, invert the vial several times after injecting the internal standard mix. The extracts are now ready for analysis. Injection volume and instrument operating conditions must be the same conditions that were used during initial calibration.

10.2 Load sample extracts, including blanks, MS, MSD and MBS on the instrument. Inject sample extracts into the GC/MS system using the same conditions that were used for the initial calibration. If the concentration in the sample exceeds the calibration range, the sample extract must be diluted and reanalyzed.

10.3 Internal area responses must be monitored for all blanks, samples, MS, MSD and MBS. If the area of any Internal Standard falls outside the –50% to +100% window from the areas determined in the continuing calibration standard for that day, the sample must be re-analyzed.

10.3 Qualitative analysis

10.3.1 Identification is based on retention time and comparison of the sample mass spectrum with characteristic ions in the reference mass spectrum. EICPs for the primary ion (m/z) and the two other masses (listed in Table 1) are used. The following criteria must be met:

10.3.1.1 The relative retention time must fall within +/- 0.06 RRT of the RT of the suspected compound.

10.3.1.2 The relative peak heights of the characteristic masses in the EICP should fall within +/- 20% of the relative intensities of these masses in a reference mass spectrum.

10.3.1.3 All characteristic masses greater than 10 % of the primary characteristic ion of the reference spectrum should be present in the sample chromatogram.

10.3.2 If the criteria for section 10.3.1.2 and 10.3.1.3 do not pass but in the opinion of the mass spectral analyst the compound is correct, then the analyst should give a positive identification for the peak. The mass spectral analyst should favor false positives if uncertain.

10.4 Quantitative analysis

10.4.1 When a target compound has been identified, the quantitation of that compound will be based on the integrated abundance from the EICP of the primary characteristic ion (m/z). If the sample produces interference for the primary ion, a secondary characteristic ion may be used to quantitate. The concentration in the sample is calculated using the equation in Section 11.3.

10.4.2 If the response for any ion (m/z) exceeds the working range of the GC/MS system, dilute the extract, reinject the appropriate amount of internal standard so that the final concentration in the vial is 40mg/L, and reanalyze.

11.0 CALCULATIONS

11.1 Percent Breakdown

$$\text{breakdown of DDT} = \frac{\text{sum of degradation peak areas (DDD + DDE)}}{\text{sum of all peak areas (DDT + DDD + DDE)}} \times 100\ \%$$

11.2 Response factor:

$$\text{Equation 1: } RF = \frac{(A_s)(C_{is})}{(A_{is})(C_s)}$$

where:

A_s = Area of the characteristic ion(m/z) for the parameter to be measured.
A_{is} = Area of the characteristic ion for the internal standard.
C_{is} = Concentration of the internal standard (ug/L)
C_s = Concentration of the parameter to be measured (ug/L)

11.3 Concentration:

$$\text{Equation 2: Concentration (ug/L or ug/Kg)} = \frac{(A_s)(I_s)}{(A_{is})(RF)(V_s)}$$

where:

A_s = Area of the characteristic ion(m/z) for the parameter to be measured.
A_{is} = Area of the characteristic ion for the internal standard.
I_s = Amount of internal standard added to each extract (ug)
RF = Response Factor (Equation 1, Section 11.1)
V_s = Volume of water extracted (L) or weight of sample extracted (Kg)

11.4 Percent Recovery (%R)

$$\text{Equation 3: } p = \frac{100(A-B)}{T}$$

where:

p = Percent recovery of analyte

A = Concentration of analyte after spiking
B = Concentration of unspiked sample.
T = Actual spike concentration

11.5 Relative Percent Difference

Equation 4: $R = RPD = (|A-B|)/((A+B)/2)*100$

where:

A = Sample concentration in ug/L
B = Duplicate sample concentration in ug/L

11.6 Relative Retention Times:

Equation 5: $RRT = (RT_c/RT_i)$

where:

RT_c = Retention time of target analyte in minutes
RT_i = Retention time of internal standard in minutes

12.0 QUALITY CONTROL

12.1 All internal standard responses and retention times must be monitored for the initial and continuing calibrations. All internal standard retention times from the continuing calibration must fall within 30 seconds of the internal standard in the initial mid-point calibration curve. All internal standard area counts must not change by more than a factor of two (+100 %, -50 %) from the mid-point of the last initial calibration. If any internal standard fails the criteria, the initial calibration must be rerun.

12.2 Method Blank: A method blank must be analyzed in order to demonstrate that interferences from the analytical system and glassware are under control. Each day a set of samples is extracted or reagents are changed, a method blank must be extracted and analyzed. If more than 20 samples are to be extracted in that work shift then another blank must be extracted. If any target analyte is found to be present in the reagent water blank above the EQL all samples associated with that method blank must be re extracted.

12.3 Surrogate recoveries must be fall within the quality control limits as listed in Table 4. If any surrogate is outside these limits, then reextract (volume permitting) the sample and reanalyze.

12.3.1 If the surrogate fails the criteria in the second extraction, submit original sample Results and report both sets of surrogate recoveries on form 2.

12.3.2 If surrogate recoveries are outside QC limits but the sample was analyzed at a dilution, remake the dilution and reanalyze the sample. If the surrogate recoveries are still outside QC

limits, re-extract and reanalyze the sample. If the surrogate fails the criteria in the second extraction, submit original sample results and report both sets of surrogate recoveries on form 2. Samples that are diluted such that the concentration of the surrogates falls below the Reporting Limit, no re-analysis or re-extraction is necessary.

12.3.3 All surrogate recoveries that fail QC criteria must be documented on the non-conformance summary.

12.4 A Matrix Spike and Matrix Spike Duplicate (MS/MSD) must be extracted and analyzed with each prep batch up to 20 samples of the same matrix. The concentration of the spike compounds is 100 ug/L in the sample for the Base Neutral compounds and 100 ug/L for the Acid compounds (1650 and 3300 ug/Kg for soils).

12.4.1 Calculate the percent recovery (p) and relative percent deviation (R) for each compound by using the equations in Section 11.4 and 11.5.

12.4.2 Compare the p and R for each analyte with the corresponding QC acceptance criteria found in Table 4.

12.4.3 Recoveries that fall outside the QC limits must be documented in a non-conformance memo. Reextraction or reanalysis is not necessary as long as the MBS meets all QC criteria.

12.5 Laboratory Control Sample: A Method Blank Spike (MBS) must be extracted and analyzed with each prep batch of the same matrix daily. The concentration of the spike compounds is 100 ug/L in the sample for the Base Neutral compounds and 100 ug/L for the Acid compounds (1650 and 3300 ug/Kg for soils).

12.5.1 Calculate the percent recovery (p) and relative percent deviation (R) for each compound by using the equations in Section 11.4 and 11.5.

12.5.2 Compare the p and R for each analyte with the corresponding QC acceptance criteria found in Table 4.

12.5.3 If any one analyte recovery falls outside the QC limits, it must be documented in a non-conformance memo. If more than one analyte falls outside QC limits, the MBS. Blank and all associated samples must be re-extracted and re-analyzed.

12.6 Method Detection Limits(MDLs) must be generated annually. Additionally, an MDL verification standard must also be analyzed on all instruments used for sample analysis. An MDL verification standard is a qualitative QC sample containing all the analytes of interest, spiked at a concentration 1 - 4 times the calculated MDL.

12.7 Demonstration of Capability (DOC): The analyst must make a yearly demonstration of ability to generate acceptable accuracy and precision data. The analyst must perform the following operations:

12.7.1 Four quality control (QC) check samples containing each analyte (obtained from an external or second source) must be prepared and analyzed.

12.7.2 Calculate the average recovery (X) and the standard deviation of the recovery (s) for each parameter using the four results.

12.7.3 For each analyte compare s and X with the corresponding acceptance criteria for precision and accuracy, respectively found in Table 4. If s and X for all analytes meet the acceptance criteria, the performance is acceptable and analysis of actual samples can begin. If any one of the analytes does not meet the acceptance criteria, the performance is unacceptable for that analyte.

12.7.4 If any analyte tested fails any of the criteria then the analyst must proceed with the following: Repeat the test beginning in Section 12.10.1 for only those analytes which failed If this occurs, locate and correct the source of the problem and repeat the test for all compounds of interest.

13.0 NONCONFORMANCE AND CORRECTIVE ACTION

13.1 Any unplanned deviation from this procedure must be documented on a nonconformance memo.

14.0 RECORD MAINTENANCE

14.1 All raw data files are backed up on the system then transferred to DVD

14.3 All run logbooks, standard prep log books, refrigerator logs, extraction logs should be saved for a minimum of 5 years.

15.0 POLLUTION PREVENTION

15.1 The chemicals and standards needed for these analyses are purchased as needed, therefore eliminating the disposal of unused expired standards.

15.2 The sample bottles provided are appropriate to obtain a representative sample, but limit the amount of sample required for disposal.

16.0 WASTE MANAGEMENT

16.1 Expired sample extract vials are placed in a designated 55-gallon drum for disposal. Vials are not disposed of until sample results are final.

16.2 Waste Methylene chloride, acetone and hexane are collected and evaporated under the hood, the remaining remnants are then lab-packed.

17.0 ESTIMATION OF UNCERTAINTY

17.1 Refer to SOP No. 1013 for calculation of estimation of uncertainty associated with an analytical result. The calculated estimation of for this method is listed below:

Aqueous:

Aver	SD	RSD	SD2	SD3	SD-2 % Rec	SD+2 % Rec

$$\text{TAILING FACTOR} = \frac{BC}{AB}$$

Example calculation: Peak Height = DE = 100 mm
10% Peak Height = BD = 10 mm
Peak Width at 10% Peak Height = AC = 23 mm
AB = 11 mm
BC = 12 mm

$$\text{Therefore: Tailing Factor} = \frac{12}{11} = 1.1$$

VOLATILE ORGANIC COMPOUNDS BY GAS CHROMATOGRAPHY/ MASS SPECTROMETRY (GC/MS) METHOD 8260C

1.0 PURPOSE AND APPLICATION

1.1 This SOP is used to determine volatile organic compounds in aqueous and solid matrices.

1.2 This method can be used to quantitate most volatile organic compounds that have boiling points below 200°C.

1.3 This method is restricted to use by, or under the supervision of, analysts experienced in the use of gas chromatograph/mass spectrometers, and skilled in the interpretation of mass spectra and their use as a quantitative tool.

1.4 The estimated quantitation limit (EQL) of this method for an individual compound is 0.5 mg/kg (wet weight) for soil/sediment samples, and 5 ug/L for ground water. EQLs will be proportionately higher for sample extracts and samples that require dilution or when a reduced sample size is used to avoid saturation of the detector.

2.3 Hampton-Clarke Quality Assurance Manual, Current Revision

2.4 DNREC HSCA SOP, Version 5.0, Rev1, 10.30.04.

3.0 METHOD SUMMARY

3.1 The volatile compounds are introduced into the gas chromatograph by the purge-and-trap SOP 5005 and 5006. The analytes are introduced directly to a narrow-bore capillary column. The column is temperature-programmed to separate the analytes, which are then detected with a mass spectrometer (MS) interfaced to the gas chromatograph (GC).

3.2 Analytes eluted from the capillary column are introduced into the mass spectrometer via a direct connection. Identification of target analytes is accomplished by comparing their mass spectra with the electron impact spectra of authentic standards. Quantitation is accomplished by comparing the response of a major (quantitation) ion relative to an internal standard using an eight-point calibration curve.

3.3 Samples analyzed under the DENREC program will follow the current version of the HSCA SOP

4.0 SAMPLE COLLECTION, PRESERVATION AND STORAGE

4.1 Samples should be collected in the appropriate glass jars to insure a representative sample, but minimize waste disposal.

4.1.1 Aqueous samples – 40 ml vial
4.1.2 Soil sample – 40z jar, encore sampler
4.1.3 Methanol soil – 40ml VO vial with 10ml of Methanol.
4.1.3.1.For DNREC HSCA projects: Soil sample – pre-weighed 40 ml VOA vial with 10ml of the 1.5ppm Working SURR Mix - section 8.11. The methanol vials must be prepared by the laboratory prior to the sampling event including the addition of surrogates. The weight of each vial is recorded by the laboratory for future determination of analytical concentrations. The same balance must be used for both the "before" and "after" weight measurements of each bottle.

4.2 Aqueous samples are acidified to a pH <2 hydrochloric acid.

4.3 Holding time is 14 days from date of collection (7 days for water samples that are not preserved).

4.4 Refrigerate samples at 4°C (± 2°C) upon receipt until analysis, in refrigerator designated for volatile samples only.

5.0 SAFETY

5.1 Handle all chemicals appropriately.

5.2 Wear the appropriate protective clothing (Safety glasses, laboratory coat, and gloves)

6.0 INTERFERENCES

6.1 Major contaminant sources are volatile materials in the laboratory and impurities in the inert purging gas and in the sorbent trap. The use of non-polytetrafluoroethylene (PTFE) thread sealants, plastic tubing, or flow controllers with rubber components should be avoided, since such materials out-gas organic compounds which will be concentrated in the trap during the purge operation. Analyses of calibration and reagent blanks provide information about the presence of contaminants.

6.2 Contamination may occur when a sample containing low concentrations or no volatile organic compounds is analyzed immediately after a sample containing high concentrations of volatile organic compounds. A technique to prevent this problem is to rinse the purging apparatus and sample syringes with two portions of organic-free reagent water between samples. After the

analysis of a sample containing high concentrations of volatile organic compounds, one or more blanks should be analyzed to check for cross-contamination. Alternatively, if the sample immediately following the high concentration sample does not contain the volatile organic compounds present in the high level sample, freedom from contamination has been established.

6.3 For samples containing large amounts of water-soluble materials, suspended solids, high boiling compounds, or high concentrations of compounds being determined, it may be necessary to wash the purging device with a soap solution, rinse it with organic-free reagent water, and then dry the purging device in an oven at 105°C. In extreme situations, the entire purge-and-trap device may require dismantling and cleaning.

6.4 Special precautions must be taken to analyze for Methylene chloride. The analytical and sample storage area should be isolated from all atmospheric sources of Methylene chloride. Otherwise, random background levels will result. Since Methylene chloride will permeate through PTFE tubing, all gas chromatography carrier gas lines and purge gas plumbing should be constructed from stainless steel or copper tubing. Laboratory clothing worn by the analyst should be clean, since clothing previously exposed to Methylene chloride can contribute to sample contamination.

6.5 Samples can be contaminated by diffusion of volatile organics (particularly Methylene chloride and fluorocarbons) through the septum seal of the sample container into the sample during shipment and storage. A trip blank prepared from organic-free reagent water and carried through the sampling, handling, and storage protocols can serve as a check on such contamination.

7.0 REQUIRED EQUIPMENT

7.1 Micro syringes – 5uL and larger, gas-tight

7.2 Syringe – 5mL, gas tight

7.3 Balance – top loading capable of accurately weighing to 0.1 grams.

7.4 Glassware

7.4.1 Vials – 43mL, screw cap, with Teflon cap liner.

7.4.2 Volumetric flasks – Class A with ground-glass stoppers, 50mL & 100mL.

7.4.3 Vials – Amber 1-5 mL to store standards

7.5 STS Archon Purge and Trap Centurion Autosampler System (Model 12113)

7.5.1 The trap is Supelco Purge Trap K (Tekmar) or Evolution EST Analytical. The trap is packed with the absorbents: Carbopack B/ Carboxen1000 & 1001(VOCARB 3000).

7.5.2 The desorber is capable of rapidly heating the trap to 250°C. The trap should not be heated higher than 260°C during bake out mode. Alternatively, follow the manufacturer's directions.

7.6 GC/MS System

7.6.1 Agilent Gas chromatograph (Model 5890A/6890/9000) – An analytical system complete with a temperature programmable gas chromatograph suitable for on-column injection and all required accessories including syringes, analytical columns and gases.

7.6.2 Column – J&W DB-624 25 meter, 0.20 ID, 1.12 film thickness.

7.6.3 Agilent Mass spectrometer (Model 5975C/5977B/9000) – Capable of scanning from 35 to 700 amu every 2 seconds or less, using 70 volts (nominal) electron energy in the electron impact ionization mode. The mass spectrometer is capable of producing a mass spectrum for 4-Bromofluorobenzene (BFB), which meets all of the criteria in table 1 when 50 ng of the GC/MS tuning standard (BFB) is injected through the gas chromatograph inlet.

7.6.4 Data System – Environmental ChemStation G1701EA Version E.01.01335 software is interfaced to the mass spectrometer that allows the continuous acquisition and storage on machine readable media of all mass spectra obtained throughout the duration of the chromatographic program. The software allows searching any GC/MS data file for ions of a specified mass and plotting such ion abundance's versus time or scan number. This type of plot is defined as an Extracted Ion Current Profile (EICP). The software has the ability to integrate the abundance in any EICP between specified times or scan number limits.

8.0 STANDARDS AND REAGENTS

8.1 Organic-free reagent/deionized water (DI water)

8.2 Methanol, CH_3OH - Pesticide quality or equivalent, demonstrated to be free of analytes. (Fisher A453-1) Store apart from other solvents.

8.3 Stock standard solutions – Stock standard solutions purchased from approved commercial vendors accompanied by certificates of analysis (Ex. Supelco, Accustandard). These stock solutions are used to prepare the calibration, verification, spiking, and system monitoring compounds.

8.3.1 For DNREC HSCA projects: Unless the Project Quality Assurance Plan (PQAP) specifies otherwise, the compounds to be analyzed by GC/MS are as specified in Sections 8.3.1.1

8.3.1.1 - Volatile organics to be analyzed by GC/MS are as follows:

Dichlorodifluoromethane
Chloromethane

Vinyl Chloride
Bromomethane
Chloroethane
Trichlorofluoromethane
1,1-Dichloroethene
1,1,2-Trichloro-1,2,2-trifluoroethane
Acetone
Carbon Disulfide
Methyl Acetate
Methylene Chloride
trans-1,2-Dichloroethene
Methyl tert-Butyl Ether
1,1-Dichloroethane
cis-1,2-Dichloroethene
2-Butanone
Chloroform
1,1,1-Trichloroethane
Cyclohexane
Carbon Tetrachloride
Benzene
1,2-Dichloroethane
Trichloroethene
Methylcyclohexane
1,2-Dichloropropane
Bromodichloromethane
cis-1,3-Dichloropropene
4-Methyl-2-pentanone
Toluene
trans-1,3-Dichloropropene
1,1,2-Trichloroethane
Tetrachloroethene
2-Hexanone
Dibromochloromethane
1,2-Dibromoethane
Chlorobenzene
Ethylbenzene
Xylenes (total)
Styrene
Bromoform
Isopropylbenzene
1,1,2,2-Tetrachloroethane
1,3-Dichlorobenzene
1,4-Dichlorobenzene
1,2-Dichlorobenzene
1,2-Dibromo-3-chloropropane
1,2,4-Trichlorobenzene
n-Hexane
ETBE (Ethyl tert butyl ether)

A new vial of stock solutions for the gases must be opened every two months or more frequently if any problems are indicated by comparison to the initial calibration curve.

8.4 Secondary Dilution Standards – Using stock standard solutions, prepare dilution standards in methanol that contain the compounds of interest.

8.5 Prepare a 200ppm Working Standard by combining:

220uL of Methanol
100uL of 2000ppm 502.2 Cal Mix#1 (Gases)
100uL of 2000ppm 202.2 CAL2000 Mega Mix
100uL of 2000ppm 8260 Cal Mix 2
100uL of (varied conc) Custom VOC std
100uL of 2000ppm tert-Amyl Methyl Ether
40uL of 5000ppm VOA ADD MIX
100uL of 2000-20000ppm Voa Extra Add Mix
40uL of 5000ppm Ethyl Ether/Futan Mix
100uL of 2000ppm Ethyl-tert-Butyl Ether

8.5.1 Prepare a 20ppm of Working Standard by diluting 100uL from the 200 ppm VOA Working Std (Section 8.5) and adding it to 900uL of Methanol.

8.5.2 Prepare a 20 ppm Chlorodifluoromethane (Freon#22) by diluting 100uL from the 200 ppm Chlorodifluoromethane (Freon#22) (Section 8.5) and adding it to 900uL of Methanol.

8.5.3 Alternate standard preparations are made based on specific client needs.

8.5.3.1Tert-Amylmethyl ether is purchased at 2000ppm from Supelco (506737) and added to the mixture prepared in Section 8.5 when needed.

8.5.3.2 Prepare a 10,000 ppm Cyclohexanone standard by weighing 50mg of neat Cyclohexanone (ChemService F2326) into a 5ml volumetric flask. Bring to volume with Methanol. Invert the mixture three times.

8.5.3.3 Prepare a 5000ppm VOA ADD Mix by weighing 25mg each of neat 1,2,4,5-Tetramethylbenzene (Acros 409390050), p-Diethylbenzene (ChemService O-2296) and p-Ethyltoluene (ChemService O-2413) into a 5ml volumetric flask. Bring to volume with Methanol. Invert the mixture three times.

8.5.3.4 Prepare a 5000ppm VOA ADD Mix 2 by weighing 25 mg each of neat methyl methacrylate (ChemService F982), ethyl methacrylate (ChemService F984), butyl methacrylate (ChemService O-1005), n-butyl acrylate (ChemService O-1004), n-amyl acetate (ChemService

O-2003), iso-propyl acetate (ChemService F2536) and ethyl acetate (ChemService O-412) into a 5 ml volumetric flask. Bring to volume with Methanol. Invert the mixture three times.

8.5.3.5 Prepare a 5000ppm Ethyl ether/Furan Mix by weighing 50 mg each of neat ethyl ether (ChemService O-569) and furan (ChemService O-2298) into a 10 ml volumetric flask. Bring to volume with Methanol. Invert the mixture three times.

8.5.3.6 The above standard solutions (Section 8.5.1.2 and 8.5.1.5) are added at the appropriate concentrations to the 200ppm VOA Working Std (Section 8.5) when needed.

8.6 Prepare a 500ppb calibration standard by weighing 40g of DI purge water, add 100uL of the working standards prepared in Section 8.5 and 100uL of Chlorodifluoromethane (Accustandard ALR-CFC-003).

8.7 Calibration standards – Prepare calibration standards as follows:

AQUEOUS

Concentration	uL of 200 ppm VOA Working Std	uL of 200 ppm Chlorodifluoromethane*	FV in DI Water
500 ppb	250	250	100
250 ppb	125	125	100
100 ppb	50	50	100
50 ppb	25	25	100
20 ppb	10	10	100

Concentration	uL of 20 ppm VOA Working Std	uL of 20 ppm Chlorodifluoromethane*	FV in DI Water
10 ppb	50	50	100
5 ppb	25	25	100
1 ppb	5	5	100
0.5 ppb	2.5	2.5	100

* - client specific

SOIL

Concentration	uL of 500ppb Cal.Std	uL DI Water
500 ppb	5000	0
250 ppb	2500	2500
100ppb	1000	4000

50ppb	500	4500
20ppb	200	4800
5ppb	50	4950
2ppb	20	4980
1ppb	10	4990
0.5ppb	5	4995

DNREC HSCA Projects – prepare calibration standards as follows:

Concentration	uL of 200 ppm Working Std	uL of 200ppm Chlorodifluoromethane*	FV in DI Water	mL Meoh
500 ppb	250	250	100	1.500
250 ppb	125	125	100	1.750
100 ppb	50	50	100	1.900
50 ppb	25	25	100	1.950
20 ppb	10	10	100	1.980
10 ppb	5	5	100	1.990
5 ppb	2.5	2.5	100	1.995

8.8 ISTD/SURR standards – Prepare stock ISTD/SURR standards as follows:

8.8.1 2500 ppm 8260 surrogates mix (Restek 30240) and 2500ppm Internal Standard mix (Restek 30241) are purchased as stock mix from Restek

8.9 Prepare a 150 ppm Working ISTD/SURR Mix by combining 6ml of Internal standard and 6 ml of 8260 surrogate mix into a 100 ml volumetric flask half filled with Methanol. Bring up to 100 ml with Methanol. Cap and invert 3 times.

8.10 Prepare a 150ppm Working ISTD Mix by combining 6 ml of the stock ISTD Mix prepared in Section 8.8.2 and bring to volume with Methanol in a 100 ml volumetric flask.

8.11 For DNREC HSCA projects: Prepare a 150ppm Working SURR Mix by combining 6 ml of the stock SURR Mix and bring to volume with Methanol in a 100 ml volumetric flask.

8.12 BFB standard: Prepare a 50ppm solution by adding 500uL of 150ppm working ISTD/SURR Mix to 1000uL of methanol mix in a 2mL vial.

8.13 Standard (LCS/MS/MSD):
610 uL of Methanol
50uL of 2000ppm Volatile Org Compounds Mix 6
50uL of 2000ppm 502/524 Volatile Org Cal Mix

50uL of 2000ppm 8260 Cal Mix 2 (2^{nd} source)
50uL of (varied conc) Custom VOC std
50uL of 2000ppm tert-Amyl Methyl Ether
20uL of 5000ppm VOA ADD MIX (2^{nd} Source)
50uL of 2000-20000ppm Voa Extra Add Mix
20uL of 5000ppm Ethyl Ether/Futan Mix
50uL of 2000ppm Ethyl-tert-Butyl Ether

8.14 ICV – Initial Calibration Verification Standard – Prepare an ICV standard by adding 20uL of the QC standard (prepared in Section 8.10) and 10ul of Chlorodifluoromethane and bring up to 100 mL in a volumetric flask.. Invert the mixture three times.

8.15 DNREC HSCA Projects – ICV - Initial Calibration Verification Standard - Prepare an ICV standard by adding 20uL of the QC standard (prepared in Section 8.10), 1.980 mL of Methanol and bring up to 100 mL in a volumetric flask. Invert the mixture three times.

9.0 PROCEDURE

Instrument Set-up

9.1 Everyday, prior to use, condition the trap for 5 minutes while back flushing at 250°C with the column at 225°C. When a new trap is installed, condition the trap for 1 hour at 270°C in the purge mode with an inert gas flow of at least 20mL/min

9.1.1 Connect the purge and trap device to a gas chromatograph. The gas chromatograph must be operated using temperature and flow rate parameters equivalent to those in 9.2.1.

9.1.2 The purge-and-trap of aqueous samples is performed at ambient temperature.

9.2 Recommended chromatographic conditions:

9.2.1

Carrier gas (He) flow rate:	1 mL/min
Column:	J&W DB-624, 25m x 0.20 mm
Initial temperature:	45°C, hold for 1.5 minutes
Temperature program:	12°C/min to 70°C then 50°C/min to 120°C then 25°C/min to 250°C, hold for 0.25 minutes

9.2.2 BFB (Direct Injection) GC method:

Carrier gas (He) flow rate:	1 mL/min
Column:	J&W DB-624, 25m x 0.20 mm
Initial temperature:	110°C, hold for 1 minute
Temperature program:	12°C/min to 170°C

9.2.3 Set up the GC operating parameters. For example, GCMS#1. Locate the PC that controls instrument #1. From the PC window, select the icon of GCMS#1. Once the ChemStation window of the instrument appears, select Method and then select Edit Method. Follow the HP ChemStation software and set and save the instrument method.

9.2.4 Set up the MS operating parameters as follows: From the instrument control, select MS and choose the tune file. Select on the MS again and click on Edit MS SIM/SCAN, on the Acq Mode, select SCAN. Save the run method together with the operating parameters.

9.2.5 Daily GC/MS performance - at the beginning of each day analysis is to be performed inject 1uL of the 50ppm BFB (Section 8.10) as follows: Locate the PC that controls the instrument. From the PC window, select the icon of the specific instrument (i.e. GCMS#1). Once the ChemStation window appears, select Sequence, edit sample Log Table. Type the name (BFB tune) and the names of the calibration levels, vial #, data file and method of analysis. Select OK, select Sequence. Save as the date of analysis run, run Sequence. Type data file directory (usually the date of the analysis) and select Run. Using a 5uL or 10uL syringe, inject 1uL of BFB directly into the injection port of the GC. Press the start button on the GC after approximately 5 seconds of injecting the BFB standard.

9.3 Once the run analysis is completed for the BFB, from the ENVIROQUANT software, select file and load data file, double click on the following files from the G: drive: GCMSDATA, calendar year (i.e. 2008), then directory date (i.e. 11-01-08). Double click on the BFB data file . Select Method and load method. Double click on the current quantitation method for the instrument. To load the current method, a previous midlevel calibration standard can also be loaded. After loading the BFB data file and method, locate the peak for the BFB and zoom in. Double right click on the apex of the peak, select Tuner and Evaluate BFB, then Evaluate BFB to Screen. Confirm that all ions meet the acceptance criteria in Table 1. If criteria are not met the following approach is acceptable to evaluate the BFB:

- Evaluate the average scans of the apex, the scan immediately before and after the apex.
- Background subtraction of a scan prior to the elution of BFB is acceptable.

The performance criteria must be achieved before any samples, blanks or standards are analyzed. All samples, blanks and standards must be injected within 12 hours of the injection time of passing the BFB criteria. The instrument must meet the requirements in Table 1 before any analysis may take place. If the requirements are not met, make necessary adjustments to the tune. Correct the sequence log table by retyping another BFB run using the next data file, and reanalyze the BFB standard.

NOTE: All subsequent standards, samples, MS/MSDs, LCSs, and blanks associated with a BFB analysis must use the same MS instrument conditions.

Initial Calibration

9.4 After the instrument has been tuned properly, the system must be calibrated for all compounds of interest. Additional compounds may be analyzed dependent on the target list required by the client.

9.4.1 Set up the sample introduction system as outlined in Sec. 9.1. The calibration must be performed using the same introduction technique that will be used for samples. Analyze each calibration standard by programming the Archon to introduce 5mL of each calibration standard and 1uL of internal/surrogate standard mix into the purge device. Purge for 5 minutes (instrument specific) at ambient temperature following the procedure outlined in SOP # 5005.

9.4.2 Prepare calibration standards as directed in section 8. The Archon is programmed to inject 1 uL of a 150 ppm internal standard/surrogate standard into each calibration standard. This will create a concentration of 30 ppb for the internal/surrogate in all the calibration standards.

9.5 Once the analysis of the calibration standards is complete, follow these steps: If a previous quant method has already existed, from the EnviroQuant software, select load Method and choose the desired method. Save the old quant method to the new method. If a new quant method needs to be created, set and save a method with all the compounds and the parameters related to each compound. The quantitation method is saved as the instrument's name and the date of analysis (eg: 1M_0710). If a quant method has not previously been created, load the mid level std. Select Tools, EasyID. Qedit each internal standard and update Relative Target Compound. Exit and save changes. Select Quant, Calculate/Generate Report, select Quant. Qedit and verify all compounds. Exit and save change. Select InitCal, update the retention time and save the method.

9.6 Thereafter, load each data file of the standards and quantitate with the new saved method. Edit each file and make sure each compound is properly identified then update the curve by using the EnviroQuant Software. To update the quant method with the responses of the each standard, from the EnviroQuant menu, select InitCal. Click on Quick Levels Update. Clear Old Response. No to requant files before update, Single data File/Level and add each data file as per their concentration levels to the new quant method.

Once the initial calibration is updated, save the method. Select InitCal, Response Factor to Screen or printer. Once an acceptable curve is verified as per the criteria of the method (see Section 9.8 and 9.9), elect InitCal, Response Factors to CSV(form6). From the PC window, locate and double click on the EnvForms. Select import data, click on Retrieve Data (GCMS). Double click on the directory and instrument where the data file is located and run the program. Once the program has been run, print the initial calibration standard form6 and the run log and make sure all criteria are met as follows:

9.7 The area of each internal standard within the calibration curve must be 50-100% of the mid-level standard. For DNREC HSCA projects the %RSD of the area of each internal standard within the calibration curve must be ≤30%.

9.8 The average response factor for each compound must have an average %RSD no greater than 20%. If the RSD of any target analyte is greater than 20%, then a non-linear calibration

technique is employed. If the method of linear regression is applied then the lowest standard of the calibration curve must be analyzed or requantitated and be within +/-30% of the standards true concentration.

9.8.1 Curve Fitting of the Calibration Curve - The statistical considerations in developing a non-linear calibration model require more data than the more traditional linear approaches described above. Whereas the linear calibration method employs five standards for a linear (first order) calibration model, a quadratic (second order) model requires six standards.

Most curve fitting programs will use some form of least squares minimization to adjust the coefficients of the polynomial to obtain the polynomial that best fits the data. The "goodness of fit" of the polynomial equation is evaluated by calculating the weighted coefficient of the determination (COD).

$$COD = \frac{\sum_{i=1}^{n} (y_{obs} - \bar{y})^2 - \frac{(n-1)}{(n-p)} \sum_{i=1}^{n} (y_{obs} - Y_i)^2}{\sum_{i=1}^{n} (y_{obs} - \bar{y})^2}$$

where,

$\bar{y}$	=	Mean observed response from the initial calibration
y_{obs}	=	Observed response (area) for each concentration from each initial calibration standard
Y_i	=	Calculated (or predicted) response at each concentration from the initial calibration(s)
n	=	Total number of calibration points (i.e., 6 for a quadratic model; 7 for a third order model)
p	=	Number of adjustable parameters in the polynomial equation (i.e., 3 for a third order; 2 for a second order polynomial)

Under ideal conditions, with a "perfect" fit of the model to the data, the coefficient of the determination will equal 1.0. In order to be an acceptable non-linear calibration, the COD must be greater than or equal to 0.990.

Weighting is selected in the Enviroquant software. Weighting is only used during linear regression. Weight is determined by best fit. Either equal weighting or inverse concentration is used. The software performs all calculations.

9.9 Upon completion of calibration range that meets the criteria in Section 9.8, immediately analyze a second-source ICV. The recovery of each compound of interest must fall within 70-130% recovery (50-150% for Acrolein, Acrylonitrile, Dichlorodifluoromethane, TBA and Acetone). Up to 10% of the analytes may fall outside the 70-130% limits but must fall within 60-140%. A single reanalysis of the ICV is allowed. If the reanalysis of the ICV still fails, corrective action must be taken and the initial calibration reanalyzed. If the recovery of any compound falls outside of the acceptance limits, the problem must be identified and corrected and analysis may continue. Any compound that failed the ICV criteria cannot be reported using that initial calibration. Corrective action can include, but is not limited to, remaking and reanalyzing another curve or ICV.

NOTE: The ICV must be analyzed and meet criteria before the analysis of any samples.

9.10 For DNREC HSCA projects: If samples are analyzed during the same 12-hour period in which an IC is run, sample quantitations are performed using the RRF's from the mid-level IC standard.

9.11 Calibration verification – A daily calibration verification (20ppb for aqueous, 50ppb for soils) standard must be analyzed. For DNREC HSCA projects: the RFs from the calibration verification standard are used for calculating sample concentrations. If the % Diff is greater than 20% another calibration check standard may be analyzed. If the calibration still does not pass, a new initial calibration curve must be analyzed.

9.11.1 Internal standard retention time - The retention times of the internal standards in the calibration verification standard must be evaluated immediately after or during data acquisition. If the retention time for any internal standard changes by more than 10 seconds from the initial calibration, then the chromatographic system must be inspected for malfunctions and corrections must be made, as required. The verification must be re-analyzed once the problem has been corrected.

9.11.2 Internal standard response - If the EICP area for any of the internal standards in the calibration verification standard changes by a factor of two (-50% to + 100%) from that in the mid-point standard level of the most recent initial calibration sequence, the mass spectrometer must be inspected for malfunctions and corrections must be made, as appropriate. The verification must be re-analyzed once the problem has been corrected.

9.12 For DNREC HSCA projects: Ending Calibration- a second mid-range calibration standard must be analyzed at the end of each 12-hour analysis shift to confirm that the instrument response has remained sufficiently stable over the analysis period to produce reliable qualitative and quantitative results for all of the samples analyzed. All sample analyses must be "bracketed" by a successful calibration standard run at the beginning of the analysis period and another successful calibration standard run at the end of the analysis period. Unless otherwise specified in the PQAP or in the method specified in the PQAP, the following requirements shall apply:

- Immediately after the last sample has been injected, another mid-level calibration standard shall be run. "Immediately" shall be interpreted to mean that injection of the shift-

ending standard must take place within one (1) hour of the completion of the last sample analysis.

- A successful shift-ending calibration standard may be used to start a new 12-hour analysis shift only if a new tuning compound run is performed prior to its injection; the one hour time limit specified above must still be met.
- If sample analysis is terminated sooner than 12 hours after injection of the tuning compound, a shift-ending calibration standard must be run immediately after the last sample run is completed.
- Four compounds are permitted to be outside <25%D quality control limit provided the results are <50%D.
- Any variations from the above requirements must be approved by DNREC.

Analysis of samples

9.13 All the QC requirements listed for the Tune, Initial Calibration or Calibration Verification, must be met prior to commencing sample analysis.

9.13.1 All samples and standard solutions must be allowed to warm to ambient temperature before analysis.

9.13.2 Program the Archon to introduce 5 mL of sample and 1 uL of internal/surrogate standard mix for aqueous samples and 1 uL of internal standard mix for aqueous dilutions of methanol soil extracts into the purge device. The addition of 1 uL of the spiking solution to 5 mL of aqueous sample will yield a concentration of 30 ug/L of each compound.

9.13.3 If aqueous sample concentrations are expected to exceed the calibration range, program the Archon to perform the necessary dilution (from 2x to 100x). Any dilution higher than 100x must be prepared manually using a 100 ml volumetric flask.

9.13.4 For aqueous samples chosen as QC (MS, MSD), add 8 uL of the matrix spike solution (Sec. 8.11) to the 40-mL vial. Disregarding any dilutions, this is equivalent to a concentration of 20 ug/L of each matrix spike standard. The MBS (Method Blank Spike) is prepared using the same spike solution added to 40ml of reagent water. Program each method of the Archon based on the number of samples and dilution. Link one method to the other.

9.13.5 For soil samples chosen as QC (MS, MSD) add 250 uL of the matrix spike solution (Section 8.13) to each of the 2 40ml vials containing 5g of soil and 10 ml of working SURR mix (section 8.11). This is equivalent to a concentration of 50ppb of each MS compound. The MBS is prepared using the same standard added to a 40ml vial containing 5g of analyte-free solid matrix and 10 ml of methanol/surrogate mix.

9.13.6 Analyze the sample using the same condition as those used during calibration. Locate the PC that controls the instrument. From the ChemStation software, select Sequence. Edit Sample Log Table. Type the name of the blank and each sample and QC sample to be analyzed. Select OK and save the sequence. Select Position and run, select the specific line (the desired position), select OK then select Run Sequence. Start the Archon based on the method previously typed. Once the analysis of the samples is completed, from the EnviroQuant Software, load the data file

of the check standard in order to have the correct quantitation method loaded up. Load the data file to be quantitated, select Quant, Calculate/Generate Report, OK. To quantitate multiple data files. Select Jobs, Report Destination, Start Report Manager, OK, RPT1, OK. Select Jobs again, Queue Quant List of Files, Quant No Report, select the data files to be quantitated, Process. Once the files have been processed, return to report manager and select start. When all files have been quantitated, from the PC window, locate and double click on the EnvForms. Select import data and click on Retrieve Data(GCMS), double click on the directory and instrument where the data files are located and run the program. Once the program has been run, associate the appropriate MBS with their proper MS and MSD and the sample that was spiked, select send to Lims, print Run Log, surrogates form2, spike form3, ISTD Areas form8.

9.13.7 If the initial analysis of the sample or a dilution of the sample has a concentration of any analyte that exceeds the initial calibration range, the sample must be reanalyzed at a higher dilution. Secondary ion quantitation is allowed only when there are sample interferences with the primary ion.

9.13.7.1 When ions from a compound in the sample saturate the detector follow the analysis with an organic-free reagent water blank. If the blank analysis is not free of interferences, then the system must be decontaminated. Sample analysis is not to be resumed until the blank analysis is demonstrated to be free of interferences. If a blank was not run after analyzing a sample which saturated the detector and the sample that followed the high concentration run does not contain the target compound/s which saturated the detector then the system is considered free of interferences.

9.13.7.2 Perform dilutions at levels that keep the response of the major constituents (previously saturated peaks) within the linear range of the curve.

Qualitative analysis

9.14 Identification is based on retention time and comparison of the sample mass spectrum with characteristic ions in the reference mass spectrum. EICPs for the primary ion (m/z) and the two other masses (listed in Table 2) are used. The following criteria must be met:

9.14.1 The relative retention time must fall within $\pm$ 0.06 RRT of the RT of the suspected compound.

9.14.2 The relative peak heights of the characteristic masses in the EICP should fall within $\pm$ 20% of the relative intensities of these masses in a reference mass spectrum.

9.14.3 All characteristic masses greater than 10 % of the primary characteristic ion of the reference spectrum should be present in the sample chromatogram.

9.14.4 If the criteria for section 9.14.1 to 9.14.3 is not met but in the opinion of the mass spectral analyst the compound is correct, then the analyst should give a positive identification for the peak. False positives must be included in full deliverable data packages and clearly labeled "false positive."

9.15 Quantitative analysis

9.15.1 When a target compound has been identified, the quantitation of that compound will be based on the integrated abundance from the EICP of the primary characteristic ion (m/z) in Table 2. If the sample produces an interference for the primary ion, a secondary characteristic ion may be used to quantitate. The concentration in the sample is calculated using the equation:

Concentration:

Equation 2: Concentration (ug/L or ug/Kg) = $$\frac{(A_s)(I_s)(DF)}{(A_{is})(RF)(V_s)}$$

where:

A_s = Area of the characteristic ion(m/z) for the parameter to be measured.
A_{is} = Area of the characteristic ion for the internal standard.
DF = Dilution Factor
I_s = Amount of internal standard added to each extract (ug)
RF = Response Factor (from most recent continuing calibration)
V_s = Volume of water extracted (L) or weight of sample extracted (Kg)

9.15.2 If the response for any ion (m/z) exceeds the working range of the GC/MS system, dilute the extract, re-inject the appropriate amount of internal standard so that the final concentration in the vial is 40mg/L, and reanalyze.

10.0 QUALITY CONTROL

10.1 The following is a summary of the required criteria that must be met prior to analyzing samples.

10.1.1 The GC/MS system must be tuned to meet the BFB specifications in Table 1.

10.1.2 There must be an initial calibration, followed by an initial calibration verification (second source std) of the GC/MS system as described in Sec. 9.4 – 9.9.

10.1.3 The criteria for linearity of the initial calibration curve is an RSD of ≤ 20% for each compound. (See Section 9.8).

10.1.4 For non-linear calibration curves, the correlation coefficient must be greater than or equal to 0.990.

10.2 All blanks (both field and laboratory initiated blanks) associated with the samples from a

particular site will be prepared from the same source of contaminant-free ("pure") water or soil. The method blank must be analyzed immediately after the initial calibration verification std or continuing calibration standard, to ensure that the analytical system is free of contamination.

For DNREC HSCA projects: The method blank must contain less than or equal to five times (5x) the method-specified detection limit of methylene chloride, acetone, toluene, and 2-butanone or less than the level of acceptable blank contamination specified in the approved PQAP prior to analyzing any samples.

10.2.1 If the method blank results do not meet the acceptance criteria, then corrective action should be taken to locate and reduce the source of the contamination prior to analyzing samples. If the samples were run and reanalysis is not practical, then the data user should be provided with the sample results, the method blank results, and a discussion of the corrective actions taken to prevent this from reoccurring. Subtraction of the method blank results is not acceptable.

10.2.2 After the analysis of high concentration samples, subsequent samples must be reviewed for carry over. If analytes in the high-concentration sample are not present in the subsequent samples, then the lack of carryover has been demonstrated. If there is evidence that carryover may have occurred, then the samples should be reanalyzed.

10.3 For DNREC HSCA projects: Internal Standard (IS) retention times and areas must be evaluated during or immediately after data acquisition of each analysis run to determine acceptability of the results. The %RSD of the area of each IS within the calibration curve must be ≤30%. All IS retention times from the CC must fall within 30 seconds of the IS in the initial mid-point calibration curve. IS areas in the successful CC standard at the start of a 24-hour shift must vary by no more than a factor of 2 in either direction (-50% to +100%) from the average of the IS areas in the initial calibration standard runs. IS retention times in each method blank, sample, QC sample or shift-ending CC standard must vary by no more than 30 seconds from the IS retention times in the successful CC standard. IS areas in each method blank, sample, QC sample or shift-ending CC standard must vary by no more than a factor of 2 in either direction (-50% to +100%) from the IS areas in the successful CC standard. Samples that do not meet this criteria must be re-analyzed.

10.4 Surrogates are added to all samples. The four compounds that are present in the surrogate mix, elute at different retention times, allowing for a review of sample matrix and instrument response throughout the samples analysis.

10.4.1 Surrogate recovery is calculated as:

$$\text{Recovery (\%)} = \frac{\text{Concentration (or amount) found}}{\text{Concentration (or amount) added}} \times 100$$

10.4.2 Surrogates must fall within the following limits (Updated annually):

	Aqueous:	Soil:-
1,2-Dichloroethane-d4	78% - 128%	63%-143%
Bromofluorobenzene	82% - 112%	64%-129%
Dibromofluoromethane	73% - 131%	63%-140%
Toluene-d8	79% - 111%	68%-122%

If recovery is not within surrogate recovery limits, the following procedures are necessary.

10.4.2.1 Check to be sure that there are no errors in the calculations, surrogate solutions or internal standards. If errors are found, recalculate the data accordingly. Examine chromatograms for interfering peaks and integrated peak areas.

10.4.2.2 Check instrument performance. If an instrument performance problem is identified, correct the problem and re-analyze the sample.

10.4.2.3 Some samples may require dilution in order to bring one or more target analytes within the calibration range or to overcome significant interferences with some analytes.

10.4.2.4 If no instrument problem is found, and the sample was analyzed straight, the sample must be reanalyzed to confirm matrix interference.

10.4.2.5 If reanalysis confirms matrix interference, report the data from the initial run and provide the second analysis on the Form 2 for conformational purposes. If the recovery is within the limits in the re-analysis, report the second analysis with the acceptable surrogate recovery. If the holding time for the method has expired prior to the re-analysis, provide both the original and re-analysis results to the data user, and note the holding time problem.

10.5 Matrix Spike (MS), Matrix Spike Duplicates (MSD), Method Blank Spikes (MBS) - Samples are grouped into analytical batches according to the method and matrix. **All compounds are included in the spike mixture (see table 5, for a list of all compounds),**

The batch cannot exceed 20 samples. For DNREC HSCA projects all QC and samples will be analyzed concurrently. At a minimum, each batch contains the following QC samples: method blank, method blank spike, matrix spike and a matrix spike duplicate.

10.5.1 The MBS recoveries must fall within the limits specified in Table 4.

10.5.1.1 If the MBS, MS and MSD have all acceptable recoveries, the batch passes, and no problems are noted on the non-conformance summary.

10.5.1.2 If the MS or MSD have compounds that fail to meet the QC criteria (Table 4), but the MBS is recovered within acceptable limits, the batch is passed based on the

acceptable recovery of the MBS, indicating matrix effects. The problem is noted on the non-conformance summary.

10.5.1.3 If the MBS has compounds that fail to meet the QC criteria (Table 4), the MBS and all associated samples must be reanalyzed.

10.6 Demonstration of Capability (DOC) - The analyst must make a yearly demonstration of ability to generate acceptable accuracy and precision data. **All compounds that are analyzed must be reported for the DOC.** The analyst must perform the following operations:

10.6.1 Four quality control (QC) check samples containing each analyte (obtained from an external or second source) must be prepared and analyzed.

10.6.2 Calculate the average recovery (X) and the standard deviation of the recovery (s) for each parameter using the four results

10.6.3 For each analyte compare s and X with the corresponding acceptance criteria for precision and accuracy, respectively found in Table 4. If s and X for all analytes meet the acceptance criteria, the performance is acceptable and analysis of actual samples can begin. If any one of the analytes does not meet the acceptance criteria, the performance is unacceptable for that analyte.

10.6.4 If any analyte tested fails any of the criteria then the analyst must proceed with the following: Repeat the test beginning in Section 10.6.1 for only those analytes which failed. If this occurs, locate and correct the source of the problem and repeat the test for all compounds of interest.

10.6.5 Analyze a MS/MSD pair and report out all of the compounds. Include this documentation with the DOC to ensure all compound spike recoveries are being reported annually.

10.7 Method Detection Limits (MDLs) must be generated annually. Additionally, an MDL verification standard must also be analyzed on all instruments used for sample analysis. An MDL verification standard is a qualitative QC sample containing all the analytes of interest, spiked at a concentration 1 - 4 times the calculated MDL.

11.0 NONCONFORMANCE AND CORRECTIVE ACTION

11.1 Any unplanned deviation from this procedure must be documented on a nonconformance memo.

11.2 The Organics Director should outline and document a corrective action that will prevent a reoccurrence of a similar concern.

12.0 RECORD MAINTENANCE

12.1 All raw data files are backed up on the system then transferred to DVD

12.2 All hard copy packages are filed and saved for a minimum of 5 years.

12.3 All run logbooks, standard prep logbooks, refrigerator logs, extraction logs are saved for a minimum of 5 years.

13.0 POLLUTION PREVENTION

13.1 The chemicals needed for these analyses are purchased as needed, therefore climinating the disposal of unused expired standards.

13.2 The sample bottles provided are appropriate to obtain a reprcsentative sample, but limit the amount of sample required for disposal.

14.0 WASTE MANAGEMENT

14.1 Samples and chemicals are disposed of following the procedures outlined in SOP 7003 (Sample Storage and Disposal).

15.0 DEFINITIONS

15.1 Please refer to SOP 1010.

16.0 ESTIMATION OF UNCERTAINTY

16.1 Refer to SOP No. 1013 for calculation of estimation of uncertainty associated with an analytical result. The calculated estimation of uncertainty for this method is listed below:

Soil

Mean X	Mean Rec	S	RSD	STD2	STD3

TABLE 1

BFB (4-BROMOFLUOROBENZENE) MASS INTENSITY CRITERIA[a]

m/z	Required Intensity (relative abundance)
50	15 to 40% of m/z 95
75	30 to 60% of m/z 95
95	Base peak, 100% relative abundance
96	5 to 9% of m/z 95
173	Less than 2% of m/z 174
174	Greater than 50% of m/z 95
175	5 to 9% of m/z 174
176	Greater than 95% but less than 101% of m/z 174
177	5 to 9% of m/z 176

[a] Alternate tuning criteria may be used, (e.g. CLP, Method 524.2, or manufacturers" instructions), provided that method performance is not adversely affected.

TABLE 2

CHARACTERISTIC MASSES (m/z) FOR ORGANIC COMPOUNDS OF INTEREST

Compound	Primary Characteristic Ion	Secondary Characteristic Ion(s)
Acetone	58	43
Acrolein	56	55, 58
Acrylonitrile	53	52, 51
Benzene	78	-
Bromobenzene	156	77, 158
Bromochloromethane	128	49, 130
Bromodichloromethane	83	85, 127
Bromoform	173	175, 254
Bromomethane	94	96
2-Butanone	72	43
n-Butylbenzene	91	92, 134
sec-Butylbenzene	105	134
tert-Butylbenzene	119	91, 134
tert-Butyl Alcohol	59	43
Carbon disulfide	76	78
Carbon tetrachloride	117	119
Chlorobenzene	112	77, 114
Chlorodibromomethane	129	208, 206
Chloroethane	64 (49*)	66 (51*)
2-Chloroethyl vinyl ether	63	65, 106
Chloroform	83	85
Chloromethane	50 (49*)	52 (51*)
2-Chlorotoluene	91	126
4-Chlorotoluene	91	126
Cyclohexanone	55	42,98
1,2-Dibromo-3-chloropropane	75	155, 157
1,2-Dibromoethane	107	109, 188
Dibromomethane	93	95, 174
1,2-Dichlorobenzene	146	111, 148
1,3-Dichlorobenzene	146	111, 148
1,4-Dichlorobenzene	146	111, 148
Dichlorodifluoromethane	85	87
1,1-Dichloroethane	63	65, 83
1,2-Dichloroethane	62	98
1,1-Dichloroethene	96	61, 63

TABLE 2 (cont.)

Compound	Primary Characteristic Ion	Secondary Characteristic Ion(s)
cis-1,2-Dichloroethene	96	61, 98
trans-1,2-Dichloroethene	96	61, 98
1,2-Dichloropropane	63	112
1,3-Dichloropropane	76	78
2,2-Dichloropropane	77	97
1,1-Dichloropropene	75	110, 77
cis-1,3-Dichloropropene	75	77, 39
trans-1,3-Dichloropropene	75	77, 39
Di-isopropyl ether	45	87
1,4-Dioxane	88	58, 43, 57
Ethylbenzene	91	106
Hexachlorobutadiene	225	223, 227
2-Hexanone	43	58, 57, 100
Iodomethane	142	127, 141
Isopropylbenzene	105	120
p-Isopropyltoluene	119	134, 91
Methyl acetate	43	74
Methyl-t-butyl ether	73	57
Methylene chloride	84	86, 49
Methyl-t-butyl ether	73	57
Methylcyclohexane	83	55,98
Methylene chloride	84	86, 49
4-Methyl-2-pentanone	100	43, 58, 85
Naphthalene	128	-
n-Propylbenzene	91	120
Styrene	104	78
1,2,3-Trichlorobenzene	180	182, 145
1,2,4-Trichlorobenzene	180	182, 145
1,1,1,2-Tetrachloroethane	131	133, 119
1,1,2,2-Tetrachloroethane	83	131, 85
Tetrachloroethene	164	129, 131, 166
Toluene	92	91
1,1,1-Trichloroethane	97	99, 61
1,1,2-Trichloroethane	83	97, 85
Trichloroethene	95	97, 130, 132
Trichlorofluoromethane	151	101, 153
1,2,3-Trichloropropane	75	77
1,2,4-Trimethylbenzene	105	120
1,3,5-Trimethylbenzene	105	120
Vinyl acetate	43	86
Vinyl chloride	62	64
n-Hexane	57	41, 43

TABLE 2 (cont.)

Compound	Primary Characteristic Ion	Secondary Characteristic Ion(s)
o-Xylene	106	91
m-Xylene	106	91
p-Xylene	106	91
Chlorodifluoromethane	51	85
p-Ethyltoluene	105	120
p-Diethylbenzene	119	105,134

Table 4 Recommended Minimum Relative Response Factor Criteria for Initial and Continuing Calibration Verification (cont).

Volatile Compound	Minimum Response Factor (RF)[a]
Isopropylbenzene	0.100
1,1,2,2-Tetrachloroethane	0.300
1,3-Dichlorobenzene	0.600
1,4-Dichlorobenzene	0.500
1,2-Dichlorobenzene	0.400
1,2-Dibromo-3-chloropane	0.050
1,2,4-Trichlorobenzene	0.200
Ethyl Acetate	0.100
Isopropyl acetate	0.100
n-Amyl Acetate	0.100
Butyl methacrylate	0.100
Ethyl methacrylate	0.100
n-Butyl acrylate	0.100
n-Hexane	0.100

[a] The project-specific response factors obtained may be affected by the quantitation ion selected and when using possible alternate ions the actual response factors may be lower than those listed. In addition, lower than the recommended minimum response factors may be accepted for those compounds that are not considered critical target analytes and associated data may be used for screening purposes.

GC/FID ANALYSIS OF TOTAL EXTRACTABLE PETROLEUM HYDROCARBONS METHOD NJDEP EPH 10/08 Rev3

1.0 PURPOSE AND APPLICATION

1.1 This SOP is used to determine the collective concentrations of extractable aliphatic and aromatic petroleum hydrocarbons in water, soil, sediment and sludge samples. This method is applicable to the analysis of Extractable Petroleum Hydrocarbons (EPH).

1.2 This method is restricted for use by, or under the supervision of, analysts experienced in the use of gas chromatographs and skilled in the interpretation of gas chromatograms.

1.3 Reporting Limits for this method are: for soils 60 mg/kg, for waters 300 ug/L.

2.4 Analysis of Extractable Petroleum Hydrocarbon Compounds (EPH) in aqueous, Soil, Sediment and Sludge", NJ DEP EPH 10/08 Rev 3.

3.0 METHOD SUMMARY

3.1 A measured volume or weight of sample is extracted using the appropriate matrix-specific extraction technique (see SOPs 3212 and 3213). The extracts are then analyzed by GC/FID. For non-aqueous samples that have not been known to be contaminated with #2 diesel fuel and have greater than 1700 mg/kg total EPH, the extracts are then solvent exchanged into hexane and separated into aliphatic and aromatic fraction using fractionation silica cartridge technique (see SOP3214). The extracts are re-concentrated and subsequently analyzed separately by GC/FID. Each of the resultant chromatograms of the aliphatic and aromatic fractions is used to quantitate four distinct carbon number ranges. Each carbon number range is defined using equivalent carbon (EC) numbers. The EC is related to a compound's boiling point and retention time on a gas chromatography column normalized to the actual carbon numbers of n-alkanes. For example, the EC of Acenaphthylene is 15.06 because its boiling point and GC retention time are halfway

between those of n-Tetradecane (a straight 14-carbon chain compound) and n-hexadecane (a straight 16-carbon chain compound). The EC numbers are used because they are more closely related to environmental mobility. The four EC number ranges for the aliphatic fractions are: EC9 to EC12, EC12 to EC16, EC16 to EC21 and EC21 to EC40. Similarly, the resultant chromatograms of the aromatic fractions are used to quantitate four distinct carbon number ranges: EC10 to EC12, EC12 to EC16, EC16 to EC21 and EC21 to EC36.

3.2 The EPH concentration is determined by integration of the FID chromatogram. Average calibration factors or response factors using the aliphatic standard mixture are used to calculate the concentration of each carbon range and total EPH. Average calibration factors or response factors using the aromatic standard mixture are used to calculate the concentration of each carbon range. Concentrations of each carbon range from both fractions are summed for a total EPH concentration.

3.3 The quantitation limit for each carbon range in soil is approximately 10 mg/kg and in water 100 ug/L.

3.4 Approximate Dynamic Range

3.4.1 EPH

Soil 80 - 16000 mg/kg
Aqueous 0.8 - 160 mg/L

Individual Carbon Ranges

Soil 10 - 2,000 mg/kg
Aqueous 0.10-20 mg/L

3.5 Compounds

3.5.1 Aliphatic Hydrocarbon Standard

Aliphatic Hydrocarbon (EC #)
n-Nonane (C9)
n-Decane (C10)
n-Dodecane (C12)
n-Tetradecane (C14)
n-Hexadecane (C16)
n-Octadecane (C18)
n-Eicosane (C20)
n-Heneicosane (C21)

n-Docosane (C22)
n-Tetracosane (C24)
n-Hexacosane (C26)
n-Octacosane (C28)
n-Triacontane (C30)
n-Dotriacontane (C32)
n-Tetratriacontane (C34)
n-Hexatriacontane (C36)
n-Octatriacontane (C38)
n-Tetracontane (C40)

3.5.2 Aromatic Hydrocarbon Standard

Aromatic Hydrocarbon (EC #)
Acenaphthene (C15.5)
Acenaphthylene (C15.06)
Anthracene (C19.43)
Benzo[a]anthracene (C26.37)
Benzo[a]pyrene (C31.34)
Benzo[b]fluoranthene (C30.14)
Benzo[g,h,i]perylene (C34.01)
Benzo[k]fluoranthene (C30.14)
Chrysene (C27.41)
Dibenz[a,h]anthracene (C30.36)
Fluoranthene (C21.85)
Fluorene (C16.55)
Indeno[1,2,3-cd]pyrene (C35.01)
2-Methylnaphthalene (C12.89)
Naphthalene (C11.7)
Phenanthrene (C19.36)
Pyrene (C20.8)
1,2,3-Trimethylbenzene (C10.1)

4.0 INTERFERENCES

4.1 Contamination by carryover can occur whenever high-concentration and low-concentration samples are analyzed in sequence. To reduce the potential for carryover, the sample syringe must be thoroughly rinsed between samples with an appropriate solvent.

4.2 Before processing any sample, the analyst shall demonstrate daily, through the analysis of a method blank, that the entire system is interference-free.

4.3 High purity solvents must be used to minimize interference problems.

4.4 Auto sampler vial septum should be replaced after each injection to minimize possibility of alkane contamination that can occur with re-analyzed extracts.

4.5 Naturally occurring alkanes may be detected by this method and may interfere with product identification. Naturally occurring plant waxes include odd carbon number alkanes from n-C25 through n-C35, and exhibit a dominant odd/even chain length distribution.

5.0 REQUIRED EQUIPMENT

5.1 Gas chromatograph - Agilent Gas chromatograph (Model 6890). An analytical system complete with a temperature programmable gas chromatograph suitable for on-column injection and all required accessories including syringes, analytical columns and gases.

5.1.1 Chromatographic conditions (base operating conditions)

Oven:

Initial Temperature: 50°C
Initial Time: 1.00 min
Ramps:

#	Rate	Final temp	Final time
1	15.00	170	1.00
2	10.00	200	0.00
3	23.0	340	4.00

Run time: 22.09

Front Inlet:
Mode: Split, splitless
Initial temp: 260°C (on)
Pressure: 13.95 psi (on)
Split ratio: 3:1 / various

Split flow: 8.0 mL/min/ various
Total flow: 8.0 mL/min
Gas saver: On
Saver flow: 20.0 mL/min
Saver time: 2.00 min
Gas type: Hydrogen

Column 1:
Initial flow: 2.7 mL/min
Nominal init pressure: 13.96 psi
Average velocity: 65 cm/sec
Inlet: Front Inlet
Outlet: Front detector

Front Detector (FID):
Temperature: 320 °C (on)
Hydrogen flow: 40.0 mL/min (on)
Air flow: 350.0 mL/min (on)
Mode: Constant makeup flow
Makeup flow: 10.0 mL/min (on)
Makeup Gas Type: Hydrogen

Front Injector:
Injection Volume: 0.5uL

5.2 Hewlett Packard HP 7683/7673 auto sampler.

5.3 GC column - J&W DB-5MS, 30 meter, 0.25 mm ID and 0.25 um phase`

5.4 Autosampler vials – 2mL.

5.5 Micro syringes – 5uL and larger.

5.6 Data System – A computer system with EnviroQuant ChemStation G1701aa Version a.03.00 software is interfaced to the gas chromatograph that allows the continuous acquisition and storage on machine-readable media of all detector signals obtained throughout the duration of the chromatographic program. The software has the ability to integrate the abundance of any signal between specified time limits

5.7 Vials – 1-4 mL or 1-7 mL to store samples

5.8 Detector - Flame ionization (FID)

5.9 Analytical balance capable of accurately weighing 0.0001 g.

6.0 STANDARDS AND REAGENTS

6.1 **NOTE:** Store the standard solutions (stock, composite, calibration, and surrogate standards) at 4°C in polytetrafluoroethylene (PTFE)-sealed containers in the dark. All Aliphatic standards need to be stored at room temperature. All stock standard solutions prepared in house are replaced after one year or sooner if routine QC (Sec. 9.0) indicates a problem. All intermediate and working calibration standard solutions are replaced after six months or sooner if routine QC indicates a problem.

6.2 o-Terphenyl (OTP) surrogate standard – Prepare a 4000 ppm surrogate standard as follows:

6.2.1 Weigh 40 mg of neat o-Terphenyl (T2800-25G) into a 10ml volumetric flask. Bring to volume with Methylene chloride. Stopper and invert the mixture 2 to 3 times.

6.3 1-Chlorooctadecane (COD) surrogate standard – Prepare a 1000 ppm surrogate standard as follows:

6.3.1 weigh 10 mg of neat 1-Chlorooctadecane (N-10042-1G) into a 10ml volumetric flask. Bring to volume with Methylene chloride. Stopper and invert the mixture 2 to 3 times.

6.4 Surrogates Solution Mix – Prepare a 1000ppm surrogate mix by weighing out separately each, 50 mg of neat 1-Chlorooctadecane (ChemService O-629) and 50 mg of neat o-Terphenyl (Aldrich T280-0) into a 50ml volumetric flask. Bring to volume with Methylene chloride. Stopper and invert the mixture 2 to 3 times.

6.5 Fractionation Surrogate Mix (4000PPM) – Purchase as solution from Restek, p/n: 31469 containing Bromonaphthalene (Chem Service N10293-500ug) and 2-Fluorobiphenyl (Sigma-Aldrich 102741-10g).

6.6 Aliphatic Calibration Standards – Calibration standards are purchased from Restek-30540. This standard contains 1000ppm of individual alkane (C9, C10, C12, C14, C16, C18, C20, C21, C22, C24, C26, C28, C30, C38, C34, C36, C38, C40), Naphthalene and 2-Methylnaphthalene.

6.6.1 500ppm secondary standard Mix A: Initial calibration standards are prepared at six different concentration from a secondary dilution standard that is prepared by combining 1000uL of the Surrogates Solution Mix (as prepared in Section 6.4) with 1000uL of the 1000ppm Calibration Std (Accustandard, p/n S-18448-R2) in a 4 ml vial. Mix by inverting 2 to 3 times.

6.6.2 500ppm secondary standard Mix B: Initial calibration standards are prepared at six different concentration from a secondary dilution standard that is prepared by combining 1000uL of COD surrogate std (as prepared in Section 6.3) with 1000uL of the 1000ppm Calibration Std (Restek-30540) in a 4 ml vial. Mix by inverting 2 to 3 times

6.6.3 Prepare independently the 6 working aliphatic calibration concentration standards for Mix A and for Mix B as follows:

Cal Conc	µL of 500 ppm (Sect. 6.5.1)	µL of Hexanes	For samples not requiring fractionation µL of $MeCl_2$
10 ppm	20	980	980
50 ppm	100	900	900
100 ppm	200	800	800
200 ppm	400	600	600
300 ppm	600	400	400
500 ppm	*	-	-

* - Use 500ppm stock prepared in Section 6.6.1 and 6.6.2

6.7 Aliphatic ICV Standard – 50ul of 2000ppm ICV Cal Std (restek-30540) with 100 ul of surrogate std (Sec. 6.4) with 850 ul of Hexane.

6.8 Aromatic Calibration Standards – Calibration standards are purchased from Restek 31469. This standard contains 1000ppm of individual aromatic compound (Acenaphthene, Acenaphthylene, Anthracene, Benzo[a]anthracene, Benzo[a]pyrene, Benzo[b]fluoranthene, Benzo[g,h,i]perylene, Benzo[k]fluoranthene, Chrysene, Dibenz[a,h]anthracene, Fluoranthene, Fluorene, Indeno[1,2,3-cd]pyrene, 2-Methylnaphthalene, Naphthalene, Phenanthrene, Pyrene, 1,2,3-Trimethylbenzene).

6.8.1 500ppm secondary standard: Initial calibration standards are prepared at six different concentration from a secondary dilution standard that is prepared by combining 250uL of the OTP surrogate std (as prepared in Section 6.2), 250 uL of the fractionation surrogate mix (section 6.5), 1000uL of the 1000ppm Calibration Std (Restek 31469) and 500uL of Methylene Chloride in a 4 ml vial. Mix by inverting 2 to 3 times.

6.8.2 Prepare working aromatic calibration standards as follows:

Calibration Concentration	µL of 500 ppm (Sect. 6.9.1)	µL of $MeCl_2$
10 ppm	20	980
50 ppm	100	900
100 ppm	200	800
120 ppm	240	760
150 ppm	300	700
200 ppm	400	600

* - Use 500ppm stock prepared in Section 6.9.1

6.9 Aromatic ICV Standard – Prepare a 100 ppm second source Initial Calibration Verification (ICV) standard as follows: Combine 100uL of a 1000ppm ICV cal std (Restek 31469), 25uL of the surrogate std (as prepared in Section 6.2), 25 uL of the fractionation surrogate mix (section 6.5) and 850uL of Methylene chloride.

7.0 SAMPLE COLLECTION, PRESERVATION, AND HANDLING

7.1 Extracts must be stored under refrigeration and analyzed within 40 days of extraction.

8.0 PROCEDURE

8.1 Initial Aliphatic calibration for samples requiring fractionation

8.1.1 Set up the sample introduction system as outlined in Sec. 5.1.1. Prepare calibration standards using the procedures described above (Sec. 6.6 and 6.8).

8.1.2 External standard calibration procedure for the aliphatic standard calibration Mix B:

8.1.2.1 The calibration procedure begins with determining the area attributable to column bleed by injecting 1uL of a Hexane blank for the aliphatic fraction analysis. When processing results, the integration area of each of the four carbon ranges is determined and subtracted out from all samples when calculating sample concentrations). Add 1mL of Hexane to an auto sampler vial.

8.1.2.2 Load the Hexane vial, calibration standard vials for mix B (prepared in Sec. 6.6) and the ICV (prepared in Sec. 6.8) on the auto sampler tray. Using the Chemstation software, select the instrument (i.e. GC #8). Select the correct method, then edit. Follow the HP Chemstation software to set and save the instrument method by following the acquisition parameters defined in Section 8.1.

8.1.2.3 Select sequence. Edit sequence log table, entering sample information (name, vial position, data file). Save sequence and select run sequence.

8.1.2.4 Once the analysis of the Hexane blank and the calibration standards are complete, calculate the calibration factor (CF) and the percent relative standard deviation (%RSD) of the CF for each individual compound and surrogate, and in addition to separate CF for each carbon range of interest. Calculate the CFs for the C9-C12, C12-C16, C16-C21 and C21-C40 Aliphatic Hydrocarbon carbon ranges from the appropriate aliphatic analysis chromatogram using Chemstation software.

For the aliphatic fraction, use the following compounds as carbon range markers:

Range	Compound	EC
C9-C12	n-Nonane	9.0
	n-Dodecane	12.0
C12-C16	n-Dodecane + 0.1 min	
	n-Hexadecane	16.0
C16-C21	n-Hexadecane + 0.1 min	
	n-Heneicosane	21.0
C21-C40	n-Heneicosane + 0.1min	
	n-Tetracontane	40.0

(Please note: The "+ 0.1 minutes" noted above in the aliphatic fractions are maximums. Less than the "compound + 0.1 minute" as the carbon range marker can be use if peak shape and chromatographic resolution are favorable.)

8.1.2.5 Choose and save the desired method, based on the instrument date. Load the mid level calibration standard data file. Select Quant, calculate/generate report. Select Quant, Qedit quant results. Verify or integrate all compounds based on RT. Exit and save. Update retention times and save the method. Thereafter, load each data file of the standards and quantitate with the new saved method. Edit each file and make sure each compound is properly identified then update the curve using the EnviroQuant Software. To update the quant method with the responses of each standard, from the EnviroQuant menu, select InitCal, click on Quick Levels Update, Clear Old Response, No to requant files before update, Single data File/Level and add each data file as per their concentration levels to the new quant method.

Note: For the carbon ranges, the quant method responses are updated by tabulating the summation of the peak areas of all the compounds in each carbon range. The areas for the surrogates must be subtracted out from the area summation of the range in which they elute. Also, any areas associated with naphthalene and 2-methylnaphthalene in the aliphatic fraction must be subtracted out from the appropriate carbon range.

8.1.2.6 Once the initial calibration is updated, save the method. Select InitCal, Response Factor to Screen or printer. Once an acceptable curve is verified as per the criteria of the method (below), select InitCal, Response Factors to CSV(form6). From the PC window, locate and double click on the EnvForms. Select import data, click on Retrieve Data. Double click on the directory and instrument where data file is

located and run the program. Once the program has been run, print the initial calibration standard form6 and the run log and make sure all criteria are met as follows:

8.1.2.7 If the RSD is ≤ 25% for each compound, surrogates and the carbon range, then the response of the instrument is considered linear and the mean calibration factor can be used to quantitate sample results. If the RSD is greater than 25% for any compound, then the source of the problem must be identified and corrected and a new curve need to be reanalyzed.

8.2 Initial Aliphatic calibration for samples not requiring fractionation (EPH NJDEP CAT 1 and CAT 2)

8.2.1 Set up the sample introduction system as outlined in Sec. 5.1.1. Prepare calibration standards using the procedures described above (Sec. 6.6 and 6.7).

8.2.2 External standard calibration procedure for the aliphatic standard calibration Mix A:

8.2.2.1 The calibration procedure begins with determining the area attributable to column bleed by injecting 1uL of a Methylene chloride blank for the aliphatic fraction analysis. When processing results, the integration area of each of the total carbon ranges is determined and subtracted out from all samples when calculating sample concentrations). Add 1mL of Methylene chloride to an auto sampler vial.

8.2.1.2 Load the Methylene chloride vial, calibration standard vials for mix A (prepared in Sec. 6.6) and the ICV (prepared in Sec. 6.7) on the auto sampler tray. Using the Chemstation software, select the instrument (i.e. GC #8). Select the correct method, then edit. Follow the HP Chemstation software to set and save the instrument method by following the acquisition parameters defined in Section 8.1.

8.2.1.3 Select sequence. Edit sequence log table, entering sample information (name, vial position, data file). Save sequence and select run sequence.

8.2.1.4 Once the analysis of the Methylene chloride blank and the calibration standards are complete, calculate the calibration factor (CF) and the percent relative standard deviation (%RSD) of the CF for each individual compound and surrogate, and in addition to separate CF for each carbon range of interest. Calculate the CFs for the C9-C28, >C28-C40, C9-C40 Aliphatic Hydrocarbon carbon ranges from the appropriate aliphatic analysis chromatogram using Chemstation software.

For the aliphatic fraction, use the following compounds as carbon range markers:

Range	Compound	EC
C9-C28	n-Nonane	9.0
	n-Octacosane	28.0
>C28-C40	n-Octacosane + 0.1 min	
	n-Tetracontane	40.0
C9-C40	n-Nonane	
	n-Tetracontane	40.0

(Please note: The "+ 0.1 minutes" noted above in the aliphatic fractions are maximums. Less than the "compound + 0.1 minute" as the carbon range marker can be use if peak shape and chromatographic resolution are favorable.)

8.2.1.5 Choose and save the desired method, based on the instrument date. Load the mid level calibration standard data file. Select Quant, calculate/generate report. Select Quant, Qedit quant results. Verify or integrate all compounds based on RT. Exit and save. Update retention times and save the method. Thereafter, load each data file of the standards and quantitate with the new saved method. Edit each file and make sure each compound is properly identified then update the curve using the EnviroQuant Software. To update the quant method with the responses of each standard, from the EnviroQuant menu, select InitCal, click on Quick Levels Update, Clear Old Response, No to requant files before update, Single data File/Level and add each data file as per their concentration levels to the new quant method.

Note: For the carbon ranges, the quant method responses are updated by tabulating the summation of the peak areas of all the compounds in each carbon range. The areas for the surrogates must be subtracted out from the area summation of the range in which they elute. Also, any areas associated with naphthalene and 2-methylnaphthalene in the aliphatic fraction must be subtracted out from the appropriate carbon range.

8.2.1.6 Once the initial calibration is updated, save the method. Select InitCal, Response Factor to Screen or printer. Once an acceptable curve is verified as per the criteria of the method (below), select InitCal, Response Factors to CSV(form6). From the PC window, locate and double click on the EnvForms. Select import data, click on Retrieve Data. Double click on the directory and instrument where data file is located and run the program. Once the program has been run, print the initial calibration standard form6 and the run log and make sure all criteria are met as follows:

If the RSD is ≤ 25% for each compound, surrogates and each carbon range, then the response of the instrument is considered linear and the mean calibration factor can be used to quantitate sample results. If the RSD is greater than 25% for any compound, then the source of the problem must be identified and corrected and a new curve need to be reanalyzed.

8.3 Initial aromatic calibration for samples requiring fractionation.

8.3.1 The calibration procedure begins with determining the area attributable to column bleed by injecting 1 uL of a Methylene Chloride blank for the aromatic fraction analysis. When processing results, the integration area of each of the four carbon ranges is determined and subtracted out from all samples when calculating sample concentrations). Add 1mL of Methylene Chloride to an auto sampler vial.

8.3.2 Load the Methylene Chloride vial, calibration standard vials (prepared in Sec. 6.7) and the ICV (prepared in Sec. 6.8) on the auto sampler tray. Using the Chemstation software, select the instrument (i.e. GC #8). Select the correct method, then edit. Follow the HP Chemstation software to set and save the instrument method by following the acquisition parameters defined in Section 8.1.

8.3.3 Select sequence. Edit sequence log table, entering sample information (name, vial position, data file). Save sequence and select run sequence.

8.3.4 Once the analysis of the Methylene Chloride blank and the calibration standards are complete, calculate the calibration factor (CF) and the percent relative standard deviation (%RSD) of the CF for each individual compound and surrogate, and in addition to separate CF for each carbon range of interest. Calculate the CFs for the C10-C12, C12-C16, C16-C21 and C21-C36 Aromatic Hydrocarbon carbon ranges from the appropriate aromatic analysis chromatogram using Chemstation software.

For the aromatic fraction, use the following compounds as carbon range markers:

Range	Compound	EC
C10-C12	1,2,3-Trimethylbenzene	10.1
	Naphthalene	11.7
C12-C16	Naphthalene + 0.1 min	
	Acenaphthene	15.5
C16-C21	Acenaphthene + 0.1 min	
	Pyrene	20.8
C21-C36	Pyrene + 0.1min	
	Benzo(g,h,i)perylene +1.0 min	34.01

(Please note: The "+ 0.1 minutes" noted above in the aromatic fractions are maximums. Less than the "compound + 0.1 minute" as the carbon range marker can be use if peak shape and chromatographic resolution are favorable.)

8.3.5 Choose and save the desired method, based on the instrument date. Load the mid level calibration standard data file. Select Quant, calculate/generate report. Select Quant, Qedit quant results. Verify or integrate all compounds based on RT. Exit and save. Update retention times and save the method. Thereafter, load each data file of the standards and quantitate with the new saved method. Edit each file and make sure each compound is properly identified then update the curve using the EnviroQuant Software. To update the quant method with the responses of each standard, from the EnviroQuant menu, select InitCal, click on Quick Levels Update, Clear Old Response, No to requant files before update, Single data File/Level and add each data file as per their concentration levels to the new quant method.

Note: For the carbon ranges, the quant method responses are updated by tabulating the summation of the peak areas of all the compounds in each carbon range. The areas for the surrogates must be subtracted out from the area summation of the range in which they elute.

8.3.6 Once the initial calibration is updated, save the method. Select InitCal, Response Factor to Screen or printer. Once an acceptable curve is verified as per the criteria of the method (below), select InitCal, Response Factors to CSV (form6). From the PC window, locate and double click on the EnvForms. Select import data, click on Retrieve Data. Double click on the directory and instrument where data file is located and run the program. Once the program has been run, print the initial calibration standard form6 and the run log and make sure all criteria are met as follows:

8.3.7 If the RSD is $\leq$ 25% for each compound, surrogates and the carbon range, then the response of the instrument is considered linear and the mean calibration factor can be used to quantitate sample results. If the RSD is greater than 25% for any compound, then the source of the problem must be identified and corrected and a new curve need to be reanalyzed.

8.4 RT windows: Retention time windows are established for each aliphatic compound, each aromatic compound and each surrogate on each GC. This procedure is repeated whenever a new column is installed. The average and SD of the RT is calculated. Absolute RT windows are established for the individual compounds (+ or – 0.05 minutes).

8.5 Initial Calibration Verification (ICV): Once the criteria in Section 8.1- 8.3 have been met, the ICV must be analyzed immediately following initial calibration, before any samples are analyzed. When done acquiring, process the data file of the ICV from Enviroquant.

8.5.1 In Enviroquant, load the data file, select Quant, Calculate/generate report. Recoveries must fall within 70-130%. If any recoveries fail, corrective action must be taken before sample analysis can begin. Corrective action includes, but is not limited to, instrument maintenance, reprepping ICV and/or analyzing a new initial calibration.

8.6 Upon completion of an acceptable initial calibration and ICV, the analysis of a Calibration blank is required by injecting 1uL of Hexane for the aliphatic analysis or Methylene chloride for aromatic analysis fraction, followed by sample analysis, including method blanks and QC samples (MS, MSD, MBS, MBSD, sample DUP). See section 8.7.8 for sample analysis.

8.7 Continuing Calibration verification for the aliphatic analysis or the aromatic analysis.

8.7.1 The working calibration curve and retention times must be verified by the analysis of a 100ppm tandard every 24 hours or every 20 samples and at the end of the analytical sequence, whichever comes first. The verification of a linear calibration is performed using the percent difference calculation.

$$\% \text{ Difference} = \frac{\overline{CF} - CF_v}{\overline{CF}} \times 100$$

The % difference calculated for the calibration verification standard must be within ±30% for each compound and surrogates, ±25% for each carbon range before any sample analyses may take place.

8.7.2 Calibration verification of a non-linear calibration is performed using percent drift calculation:

$$\% \text{ Drift} = \frac{\text{Calculated concentration - Theoretical concentration}}{\text{Theoretical concentration}} \times 100$$

The % drift calculated for the calibration verification standard must be within ±25% for each carbon range and ±30% for each compound before any sample analyses may take place.

8.7.3 The surrogate in the calibration verification analyses must fall within previously established retention time windows. If the retention time does not fall within the ± 3σ window, take corrective taken to restore the system (i.e. instrument maintenance) or a new calibration curve must be prepared and analyzed.

8.7.4 Upon completion of the continuing calibration verification standard, load the data file. Select the initial calibration method, Quant, Calculate/generate report. Verify that all compounds meet the requirements of Sections 8.7.1 and/or 8.7.2.

8.7.5 The analysis of a Hexane blank for the aliphatic analysis or Methylene Chloride for the aromatic analysis is required after the continuing calibration verification standard. The blank must be analyzed every 24 hours or after every continuing calibration verification for the analysis of any sample and is used to determine the baseline area, or column bleed.

8.7.6 Surrogate Standards (SS) - The SS responses and retention times in the calibration check standard must be evaluated during or immediately after data acquisition. If the retention time(s) for the SS is outside the determined RT window, the chromatographic system must be inspected for malfunctions and corrections must be made. If the area(s) for the SS changes by +/- 50% from the last daily calibration standard check, the GC must be inspected for malfunctions and corrections must be made.

8.7.7 Mass Discrimination

8.7.7.1 Mass discrimination can take place in the injection port. The heavier molecules do not enter the column as a defined plug of vapor with the lighter molecules.

8.7.7.2 Placing a small plug of silanized glass wool one centimeter from the base of the glass injection liner minimizes Mass discrimination. The end of the capillary column is placed just below the glass wool. The capillary column should be placed flush with the surface of the gold seal. A full range alkane standard should be run to test the degree of mass discrimination before performing any actual sample analyses. The response factor ratio of C30/C20 must be greater than 0.8. If less than 0.8, the column should be repositioned until the mass discrimination is minimized.

8.7.8 Sample analysis

8.7.8.1 After all criteria have been met for the initial calibration and ICV or daily continuing calibration standard, the analysis of a Calibration blank is required by injecting 1uL of Hexane for the aliphatic analysis or Methylene chloride for aromatic analysis fraction, followed by sample analysis, including method blanks and QC samples (MS, MSD, MBS, MBSD). All sample extracts must be allowed to warm to ambient temperature before injection on the GC system. Using the Chemstation software, select the instrument (i.e. GC #8). Select sequence. Edit sequence log table, entering sample information (name, vial position, data file). Save sequence. Select position and run, select the specific line (the desire vial position), select run sequence.

8.7.8.2 Once the analysis of the samples, blanks and qc samples is completed, from the

EnviroQuant software, load the continuing calibration file in order to load the correct quantitation method file or the quantitation method file can simply be loaded from The EnviroQuant software by selecting method and load the correct quantitation file. Load the data file to be quantitated, select Quant, Calculate/Generate Report, OK. To quantitate multiple data files extracts. Select Jobs, Report Destination, Start Report Manager, OK, RPT1, OK. Select Jobs again, Queue Quant List of Files, Quant No Report, select the data files to be quantitated, process.

8.7.8.3 Once the files have been processed, return to report manager and select start. When all files have been quantitated. From EnviroQuant, load and generate to the printer the continuing calibration standard. Load each data file, select Quant, Qedit Quant Result. For the carbon ranges, use the carbon range markers to integrate horizontally each carbon range. Exit and save the data file. If the initial analysis of a sample has a concentration of any compound that exceeds the initial calibration range, the sample must be reanalyzed at higher dilution.

8.7.8.4 After the completion process of all Qedting of the samples, Double click on the EnvForms. Select import data. Click on Retrieve Data (GC), double click on the directory and instrument where the data files are located and run the program. Once the program has been run, associate the appropriate MBSs with their proper MS and MSD and the sample that was spiked, select send to Lims, print Run Log, surrogates form2, spike form3. Verify that all QC criteria are met before reporting any data from the analytical sequence.

8.8 Calculations

8.8.1 External standard calibration - The concentration of each carbon range for each fraction in the sample is to be determined by calculating the amount of analyte injected, from the peak response, using the calibration factor. The areas of each carbon range that was associated from the blank of hexane or Methylene chloride and the area of the surrogates must be subtracted from their corresponding carbon range summed area. Additionally, any areas associated with naphthalene and/or 2-methylnaphthalene in an aliphatic carbon range are to be subtracted from the appropriate aliphatic carbon range summed area prior to calculating the calibration factors. The concentration of a specific carbon range is calculated as follows:

8.8.1.1 Aqueous samples

$$C(ug/L) = \frac{(A)(D)(V_e)}{CF(V_s)}$$

Where:

C = Concentration of each Hydrocarbon Carbon Range (or EPH), ug/L

A = Area response of each Carbon Range (or EPH) to be measured.

D = Dilution Factor

V_s = Volume of sample, L

V_e = Final volume of the extract

CF = Calibration Factor of each carbon range for each fraction (see section 7.1.2)

Where:

$$CF = \frac{Summed\ area\ of\ peaks\ in\ carbon\ range}{Total\ concentration\ injected\ (ng/L)}$$

8.8.2 Nonaqueous

$$C(ug/g) = \frac{(A)(D)(V_e)}{CF(S)}$$

Where:

C = Concentration of each Hydrocarbon Carbon Range (or EPH) ug/g (dry weight basis)

A = Area response of each Carbon Range or EPH to be measured.

D = Dilution Factor

Ve = Final volume of the extract

CF = Calibration Factor of each carbon range for each fraction (see section

7.1.2).

Where:

$$CF = \frac{Summed\ area\ of\ peaks\ in\ carbon\ range}{Total\ concentration\ injected\ (ng/uL)}$$

S =Dry sample weight, grams

8.8.3 Total EPH Concentration = Total of the 4 Aromatic carbon ranges and 4 Aliphatic carbon ranges.

8.9 Percent Recovery of Surrogate Standard (s)

Percent recovery based on External Calibration

$$\%SS\ Recovery = \frac{C_{of}}{C_{ot}} * 100$$

Where:

C_{of} = Concentration of surrogate found
C_{ot} = Concentration of surrogate added.

8.10 Percent Solids (P)

$$P = \frac{D_s}{T_s} * 100$$

Where:

D_s = Weight dry Sample, g

T_s = Weight wet Sample, g

8.11 Dry Weight (S)

$$S = \frac{Wet\ Weight\ x\ P}{100}$$

Where:

P = Percent solids

9.0 QUALITY CONTROL

9.1 At the beginning of each analytical run and every 24 hours or 20 samples, Methylene chlorides blank for aromatic analysis or Hexane for aliphatic analysis must be run to determine the area attributed to column bleed. This area must be subtracted from all samples. The area response must be within + or – 20% of the initial baseline response .

9.2 A Method Blank (prep blank) is extracted at a frequency of at least one for each group of up to 20 samples prepared at the same time, by the same procedure. The method blank is used to determine if any interferences were extracted. The concentration of any compound in the blank must not be greater than 5X the MDL. If the concentration is greater than 5X the MDL, and the sample concentration is greater than 10x the blank, reextraction is not necessary. If the concentration in the sample is less than 10x the blank, then reextraction is necessary.

9.3 Surrogate recoveries: Interim Surrogate recovery limits are specified below. Laboratory generated limits will be established after a minimum of 20 data points are collected. If any one surrogate falls outside the limits due to co elution or if the sample extract was diluted, reanalysis is not needed.

Aqueous Samples/Soil Samples	
(COD)-1-Chlorooctadecane (Aliphatic)	40-140%
(OTP)-o-Terphenyl (Aromatic)	40-140%

9.3.1 If the recovery of COD is recovered low, outside QC limits and/or is observed in the aromatic fraction and/or OTP is recovered low, outside QC limits and/or is observed in the aliphatic fraction, the sample must be refractionated using the remaining 1ml extract and analyzed. If the refractionated sample still indicates low surrogate recoveries, re-extraction of the sample will be required.

9.3.2 If the reextracted sample surrogate recoveries are within QC limits, report only the reextracted sample results. If the reextracted sample surrogate recoveries are outside QC limits (confirming matrix effect), report the original sample results and document in nonconformance summary.

9.4 A Matrix Spike Duplicate (MS) must be extracted and analyzed with each prep batch up to 20 samples of the same matrix. Interim QC limits are 40%-140% for each carbon range (RPD should be ±50%). Laboratory generated limits will be established after a minimum of 20 data points are collected. Reextraction or reanalysis is not necessary as long as the MBS and MBSD meet all QC criteria.

9.4.1 A Sample Duplicate must be extracted and analyzed with each prep batch up to 20 samples of the same matrix. The results should not differ by more than 50 %. A matrix spike duplicate may be used if no positive EPH samples are in the batch.

9.5 MBS/MBSD - For each analytical batch (up to 20 samples of a similar matrix) the laboratory must analyze a method blank spike (MBS) and method blank spike duplicate (MBSD). The recovery of the MBS and MBSD must be 40% - 140%. Lower recoveries are permissible for n-Octane but the recoveries must be greater than 25% and must be noted in the case narrative. The standard used for MBSs must be of different source from that used for the calibration standards. The recoveries of each of the carbon ranges as well as the individual recoveries must be reported. The Analytical batch precision is determined from the Relative Percent Difference (RPD) of the concentrations (not the recoveries) of the MBS/MBSD pair . The RPDs for the aliphatic and aromatic carbon range concentrations (the sum of the individual compounds' concentrations within a carbon range) must be ≤25%.

9.5.1 Each fractionation Aliphatic sample and QC sample are evaluated for potential breakthrough on a sample-specific basis by evaluating the %recovery of the fractionation surrogates and on a batch-specific basis by qualifying the concentrations of Naphthalene and 2-Methylnaphthalene in both the aliphatic and the aromatic fractions of the MBS and MBSD. Because Naphthalene and 2-Methylnaphthalene are weakly polar, these compounds can easily mobilize into the aliphatic fraction with excessive volume of hexane, therefore it is essential to monitor the presence of these two compounds in the aliphatic fraction in the MBS and MBSD. If either the concentration of Naphthalene or 2-Methylnaphthalene in the aliphatic fraction exceeds 5% of the total concentration for Naphthalene or 2-Methylnaphthalene in MBS and MBSD, then the MBS, MBSD and any sample extract that was fractionated together with the MBSs must be refractionated and reanalyzed.

Note: The total concentration for Naphthalene or 2-Methylnaphthalene in the MBS and MBSD pair includes the summation of the concentration detected in the aliphatic and aromatic fractions.

Example of Naphthalene % Breakthrough Calculation
Naphthalene in aromatic fraction = 50
Naphthalene in aliphatic fraction = 1.5
Total naphthalene concentration = 51.5

% Naphthalene Breakthrough = 1.5/51.5x100=2.9%

9.5.2 If the fractionation surrogate recovery for either compound is outside 40%-140% for any sample extract then fractionation must be repeated on the affected sample.

9.5.3 If the MBS and MBSD spiking compounds fall outside the QC criteria after refraction and reanalysis then all samples associated with the QC must be reextracted and reanalyzed, volume permitting.

9.6 Demonstration of Capability (DOC): The analyst must make an initial and yearly demonstration of ability to generate acceptable accuracy and precision data. The analyst must perform the following operation:

9.6.1 Seven quality control check samples (MBS) containing 50 ppm of all compounds (obtained from an external or second source) must be prepared and analyzed.

9.6.2 Calculate the average recovery (X) and the standard deviation of the recovery (s) Using the seven results. The average recovery for each compound must be ±40%. Until acceptable performance is demonstrated, sample analysis may not begin.

9.7 MDL and MDL verification: An MDL study must be performed annually. Seven replicate standards are extracted and analyzed. Once the MDL is calculated (see SOP No. 1009), an MDL verification standard must be extracted and analyzed at a concentration that is 2 – 3 times the calculated MDL.

10.0 SAFETY

10.1 Handle all chemicals appropriately. The toxicity or carcinogenicity of each reagent used in this method has not been defined precisely. Each chemical compound should be treated as a potential health hazard. Exposure to these chemicals must be reduced to the lowest possible level by whatever means available.

10.2 Wear the appropriate protective clothing (Safety glasses, laboratory coat, and gloves)

11.0 NONCONFORMANCE AND CORRECTIVE ACTION

11.1 Any unplanned deviation from this procedure must be documented on a nonconformance memo.

12.0 RECORD MAINTENANCE

12.1 All raw data files are kept on magnetic media for a minimum of 5 years.

12.2 All hard copy packages are filed and saved for a minimum of 5 years.

12.3 All run logbooks, standard prep logbooks, refrigerator logs, extraction logs are saved for a minimum of 5 years.

13.0 POLLUTION PREVENTION

13.1 The chemicals needed for these analyses are purchased as needed, therefore eliminating the disposal of unused expired standards.

13.2 The sample bottles provided are appropriate to obtain a representative sample, but limit the amount of sample required for disposal.

14.0 WASTE MANAGEMENT

14.1 Samples and chemicals are disposed of following the procedures outlined in SOP 7003 (Sample Storage and Disposal).

14.2 Solvent extracts are dumped into appropriate solvent waste drums for disposal.

TABLE 1

REPORTING LIMITS

Compound	RL (mg/kg)

SOP NUMBER 6011

DATE	REV. #	INITIALS	REVISION
2/4/10	1	JR	Section 2.0 – added reference to Method 8015B
		JR	Section 6.6 – removed double reference to second source std
4/7/10	2	JR	Section 3.4 and 3.5 – corrected numbering of sections
			Section 8.1 moved to 5.1
			Section 6.6 – added 'aliphatic' for clarification
			Section 6.8 – added 'aromatic' for clarification
			Section 6.4 – added compounds
8/27/10	3	JR	Section 3.1 – for non-aqueous samples with >1700 mg/kg EPH, the extracts are then solvent exchanged and fractionated into Aliphatic and Aromatic fractions.
8/27/10	3	JR	Section 6.4 - change to surrogate solution Mix
8/27/10	3	JR	Section 6.6-6.8 - was modified to include standard for non-fractionation samples.
8/27/10	3	JR	Section 8.2 was added to include standard procedure for non-fractionation samples.
			Section 5.1 updated chromatographic conditions
6/4/13	4	RC/AH	Section 5.2 – added additional model number
6/6/13	4	RC/AH	Section 6.9.2 – Updated aromatic calibration - added 120 and 150 PPM, removed 300 and 500PPM
6/6/13	4	RC/AH	Section 8.3.4 – updated the Benzo(ghi)perylene range to 1.0 min
2/20/15	5	RK/EJ	Sec 6.5, 6.6, 6.8, 6.10: changed standards suppliers
2/20/15	5	RK/EJ	Sec 6.7: Updated to reflect current practices.
2/20/15	5	EJ	Table 1: Added reporting limits
4/28/15	6	EJ	Sec 1.3: Added reporting limits.
3/14/16	7	AH/EJ	Sec.5.1.1, 5.7: updated to current lab practices
3/22/16	7	AH/EJ	Sec 6.6.3: added volumes of $MeCl_2$
3/22/16	7	AH/EJ	Sec 8.2.2: changed Hexane to Methylene chloride
3/25/16	7	AH/EJ	Sec 7.1: removed "in the dark"
02/21/17	8	AH/EJ	Sec 6.0: Updated to current lab practices
08/25/17	9	RC	Updated SOP title to reflect correct version of method (3)
08/25/17	9	RC	Section 2.4: updated method reference to correct version of method (3)

GC/FID ANALYSIS OF TOTAL EXTRACTABLE PETROLEUM HYDROCARBONS METHOD NJDEP EPH 10/08 Rev3

1.0 PURPOSE AND APPLICATION

1.1 This SOP is used to determine the collective concentrations of extractable aliphatic and aromatic petroleum hydrocarbons in water, soil, sediment and sludge samples. This method is applicable to the analysis of Extractable Petroleum Hydrocarbons (EPH).

1.2 This method is restricted for use by, or under the supervision of, analysts experienced in the use of gas chromatographs and skilled in the interpretation of gas chromatograms.

1.3 Reporting Limits for this method are: for soils 60 mg/kg, for waters 300 ug/L.

3.0 METHOD SUMMARY

3.1 A measured volume or weight of sample is extracted using the appropriate matrix-specific extraction technique (see SOPs 3212 and 3213). The extracts are then analyzed by GC/FID. For non-aqueous samples that have not been known to be contaminated with #2 diesel fuel and have greater than 1700 mg/kg total EPH, the extracts are then solvent exchanged into hexane and separated into aliphatic and aromatic fraction using fractionation silica cartridge technique (see SOP3214). The extracts are re-concentrated and subsequently analyzed separately by GC/FID. Each of the resultant chromatograms of the aliphatic and aromatic fractions is used to quantitate four distinct carbon number ranges. Each carbon number range is defined using equivalent carbon (EC) numbers. The EC is related to a compound's boiling point and retention time on a gas chromatography column normalized to the actual carbon numbers of n-alkanes. For example,

the EC of Acenaphthylene is 15.06 because its boiling point and GC retention time are halfway between those of n-Tetradecane (a straight 14-carbon chain compound) and n-hexadecane (a straight 16-carbon chain compound). The EC numbers are used because they are more closely related to environmental mobility. The four EC number ranges for the aliphatic fractions are: EC9 to EC12, EC12 to EC16, EC16 to EC21 and EC21 to EC40. Similarly, the resultant chromatograms of the aromatic fractions are used to quantitate four distinct carbon number ranges: EC10 to EC12, EC12 to EC16, EC16 to EC21 and EC21 to EC36.

3.2 The EPH concentration is determined by integration of the FID chromatogram. Average calibration factors or response factors using the aliphatic standard mixture are used to calculate the concentration of each carbon range and total EPH. Average calibration factors or response factors using the aromatic standard mixture are used to calculate the concentration of each carbon range. Concentrations of each carbon range from both fractions are summed for a total EPH concentration.

3.3 The quantitation limit for each carbon range in soil is approximately 10 mg/kg and in water 100 ug/L.

3.4 Approximate Dynamic Range

3.4.1 EPH

Soil 80 - 16000 mg/kg
Aqueous 0.8 - 160 mg/L

Individual Carbon Ranges

Soil 10 - 2,000 mg/kg
Aqueous 0.10-20 mg/L

3.5 Compounds

3.5.1 Aliphatic Hydrocarbon Standard
Aliphatic Hydrocarbon (EC #)
n-Nonane (C9)
n-Decane (C10)
n-Dodecane (C12)
n-Tetradecane (C14)
n-Hexadecane (C16)
n-Octadecane (C18)
n-Eicosane (C20)
n-Heneicosane (C21)

n-Docosane (C22)
n-Tetracosane (C24)
n-Hexacosane (C26)
n-Octacosane (C28)
n-Triacontane (C30)
n-Dotriacontane (C32)
n-Tetratriacontane (C34)
n-Hexatriacontane (C36)
n-Octatriacontane (C38)
n-Tetracontane (C40)

3.5.2 Aromatic Hydrocarbon Standard

Aromatic Hydrocarbon (EC #)
Acenaphthene (C15.5)
Acenaphthylene (C15.06)
Anthracene (C19.43)
Benzo[a]anthracene (C26.37)
Benzo[a]pyrene (C31.34)
Benzo[b]fluoranthene (C30.14)
Benzo[g,h,i]perylene (C34.01)
Benzo[k]fluoranthene (C30.14)
Chrysene (C27.41)
Dibenz[a,h]anthracene (C30.36)
Fluoranthene (C21.85)
Fluorene (C16.55)
Indeno[1,2,3-cd]pyrene (C35.01)
2-Methylnaphthalene (C12.89)
Naphthalene (C11.7)
Phenanthrene (C19.36)
Pyrene (C20.8)
1,2,3-Trimethylbenzene (C10.1)

4.0 INTERFERENCES

4.1 Contamination by carryover can occur whenever high-concentration and low-concentration samples are analyzed in sequence. To reduce the potential for carryover, the sample syringe must be thoroughly rinsed between samples with an appropriate solvent.

4.2 Before processing any sample, the analyst shall demonstrate daily, through the analysis of a method blank, that the entire system is interference-free.

4.3 High purity solvents must be used to minimize interference problems.

4.4 Auto sampler vial septum should be replaced after each injection to minimize possibility of alkane contamination that can occur with re-analyzed extracts.

4.5 Naturally occurring alkanes may be detected by this method and may interfere with product identification. Naturally occurring plant waxes include odd carbon number alkanes from n-C25 through n-C35, and exhibit a dominant odd/even chain length distribution.

5.0 REQUIRED EQUIPMENT

5.1 Gas chromatograph - Agilent Gas chromatograph (Model 6890). An analytical system complete with a temperature programmable gas chromatograph suitable for on-column injection and all required accessories including syringes, analytical columns and gases.

5.1.1 Chromatographic conditions (base operating conditions)

Oven:

Initial Temperature: 50°C
Initial Time: 1.00 min
Ramps:

#	Rate	Final temp	Final time
1	15.00	170	1.00
2	10.00	200	0.00
3	23.0	340	4.00

Run time: 22.09

Front Inlet:
Mode: Split, splitless
Initial temp: 260°C (on)
Pressure: 13.95 psi (on)
Split ratio: 3:1 / various
Split flow: 8.0 mL/min/ various
Total flow: 8.0 mL/min
Gas saver: On
Saver flow: 20.0 mL/min
Saver time: 2.00 min
Gas type: Hydrogen

Column 1:
Initial flow: 2.7 mL/min
Nominal init pressure: 13.96 psi
Average velocity: 65 cm/sec
Inlet: Front Inlet
Outlet: Front detector

Front Detector (FID):
Temperature: 320 °C (on)
Hydrogen flow: 40.0 mL/min (on)
Air flow: 350.0 mL/min (on)
Mode: Constant makeup flow
Makeup flow: 10.0 mL/min (on)
Makeup Gas Type: Hydrogen

Front Injector:
Injection Volume: 0.5uL

5.2 Hewlett Packard HP 7683/7673 auto sampler.

5.3 GC column - Agilent J&W DB-5MS UI, 30 meter, 0.25 mm ID and 0.25 um phase part # 122-5532UI

5.4 Autosampler vials – 2mL.

5.5 Micro syringes – 5uL and larger.

5.6 Data System – A computer system with EnviroQuant ChemStation G1701aa Version a.03.00 software is interfaced to the gas chromatograph that allows the continuous acquisition and storage on machine-readable media of all detector signals obtained throughout the duration of the chromatographic program. The software has the ability to integrate the abundance of any signal between specified time limits

5.7 Vials – 1-4 mL or 1-7 mL to store samples

5.8 Detector - Flame ionization (FID)

5.9 Analytical balance capable of accurately weighing 0.0001 g.

6.0 STANDARDS AND REAGENTS

6.1 **NOTE:** Store the standard solutions (stock, composite, calibration, and surrogate standards) at 4°C in polytetrafluoroethylene (PTFE)-sealed containers in the dark. All Aliphatic standards need to be stored at room temperature. All stock standard solutions prepared in house are replaced after one year or sooner if routine QC (Sec. 9.0) indicates a problem. All intermediate and working calibration standard solutions are replaced after six months or sooner if routine QC indicates a problem.

6.2 o-Terphenyl (OTP) surrogate standard – Prepare a 4000 ppm surrogate standard as follows:

6.2.1 Weigh 40 mg of neat o-Terphenyl (T2800-25G) into a 10ml volumetric flask. Bring to volume with Methylene chloride. Stopper and invert the mixture 2 to 3 times.

6.3 1-Chlorooctadecane (COD) surrogate standard – Prepare a 1000 ppm surrogate standard as follows:

6.3.1 weigh 10 mg of neat 1-Chlorooctadecane (N-10042-1G) into a 10ml volumetric flask. Bring to volume with Methylene chloride. Stopper and invert the mixture 2 to 3 times.

6.4 Surrogates Solution Mix – Prepare a 1000ppm surrogate mix by weighing out separately each, 50 mg of neat 1-Chlorooctadecane (ChemService O-629) and 50 mg of neat o-Terphenyl (Aldrich T280-0) into a 50ml volumetric flask. Bring to volume with Methylene chloride. Stopper and invert the mixture 2 to 3 times.

6.5 Fractionation Surrogate Mix (4000PPM) – Purchase as solution from Restek, p/n: 31469 containing Bromonaphthalene (Chem Service N10293-500ug) and 2-Fluorobiphenyl (Sigma-Aldrich 102741-10g).

6.6 Aliphatic Calibration Standards – Calibration standards are purchased from Restek-30540. This standard contains 1000ppm of individual alkane (C9, C10, C12, C14, C16, C18, C20, C21, C22, C24, C26, C28, C30, C38, C34, C36, C38, C40), Naphthalene and 2-Methylnaphthalene.

6.6.1 500ppm secondary standard Mix A: Initial calibration standards are prepared at six different concentration from a secondary dilution standard that is prepared by combining 1000uL of the Surrogates Solution Mix (as prepared in Section 6.4) with 1000uL of the 1000ppm Calibration Std (Accustandard, p/n S-18448-R2) in a 4 ml vial. Mix by inverting 2 to 3 times.

6.6.2 500ppm secondary standard Mix B: Initial calibration standards are prepared at six different concentration from a secondary dilution standard that is prepared by combining 1000uL of COD surrogate std (as prepared in Section 6.3) with 1000uL of the 1000ppm Calibration Std (Restek-30540) in a 4 ml vial. Mix by inverting 2 to 3 times

6.6.3 Prepare independently the 6 working aliphatic calibration concentration standards for Mix A and for Mix B as follows:

Cal Conc	µL of 500 ppm (Sect. 6.5.1)	µL of Hexanes	For samples not requiring fractionation µL of $MeCl_2$
10 ppm	20	980	980
50 ppm	100	900	900
100 ppm	200	800	800
200 ppm	400	600	600
300 ppm	600	400	400
500 ppm	*	-	-

* - Use 500ppm stock prepared in Section 6.6.1 and 6.6.2

6.7 Aliphatic ICV Standard – 50ul of 2000ppm ICV Cal Std (restek-30540) with 100 ul of surrogate std (Sec. 6.4) with 850 ul of Hexane.

6.8 Aromatic Calibration Standards – Calibration standards are purchased from Restek 31469. This standard contains 1000ppm of individual aromatic compound (Acenaphthene, Acenaphthylene, Anthracene, Benzo[a]anthracene, Benzo[a]pyrene, Benzo[b]fluoranthene, Benzo[g,h,i]perylene, Benzo[k]fluoranthene, Chrysene, Dibenz[a,h]anthracene, Fluoranthene, Fluorene, Indeno[1,2,3-cd]pyrene, 2-Methylnaphthalene, Naphthalene, Phenanthrene, Pyrene, 1,2,3-Trimethylbenzene).

6.8.1 500ppm secondary standard: Initial calibration standards are prepared at six different concentration from a secondary dilution standard that is prepared by combining 250uL of the OTP surrogate std (as prepared in Section 6.2), 250 uL of the fractionation surrogate mix (section 6.5), 1000uL of the 1000ppm Calibration Std (Restek 31469) and 500uL of Methylene Chloride in a 4 ml vial. Mix by inverting 2 to 3 times.

6.8.2 Prepare working aromatic calibration standards as follows:

Calibration Concentration	µL of 500 ppm (Sect. 6.9.1)	µL of $MeCl_2$
10 ppm	20	980
50 ppm	100	900
100 ppm	200	800
120 ppm	240	760
150 ppm	300	700
200 ppm	400	600

* - Use 500ppm stock prepared in Section 6.9.1

6.9 Aromatic ICV Standard – Prepare a 100 ppm second source Initial Calibration Verification (ICV) standard as follows: Combine 100uL of a 1000ppm ICV cal std (Restek 31469), 25uL of the surrogate std (as prepared in Section 6.2), 25 uL of the fractionation surrogate mix (section 6.5) and 850uL of Methylene chloride.

7.0 SAMPLE COLLECTION, PRESERVATION, AND HANDLING

7.1 Extracts must be stored under refrigeration at 4±2°C and analyzed within 40 days of extraction.

8.0 PROCEDURE

8.1 Initial Aliphatic calibration for samples requiring fractionation

8.1.1 Set up the sample introduction system as outlined in Sec. 5.1.1. Prepare calibration standards using the procedures described above (Sec. 6.6 and 6.8).

8.1.2 External standard calibration procedure for the aliphatic standard calibration Mix B:

8.1.2.1 The calibration procedure begins with determining the area attributable to column bleed by injecting 1uL of a Hexane blank for the aliphatic fraction analysis. When processing results, the integration area of each of the four carbon ranges is determined and subtracted out from all samples when calculating sample concentrations). Add 1mL of Hexane to an auto sampler vial.

8.1.2.2 Load the Hexane vial, calibration standard vials for mix B (prepared in Sec. 6.6) and the ICV (prepared in Sec. 6.8) on the auto sampler tray. Using the Chemstation software, select the instrument (i.e. GC #8). Select the correct method, then edit. Follow the HP Chemstation software to set and save the

instrument method by following the acquisition parameters defined in Section 8.1.

8.1.2.3 Select sequence. Edit sequence log table, entering sample information (name, vial position, data file). Save sequence and select run sequence.

8.1.2.4 Once the analysis of the Hexane blank and the calibration standards are complete, calculate the calibration factor (CF) and the percent relative standard deviation (%RSD) of the CF for each individual compound and surrogate, and in addition to separate CF for each carbon range of interest. Calculate the CFs for the C9-C12, C12-C16, C16-C21 and C21-C40 Aliphatic Hydrocarbon carbon ranges from the appropriate aliphatic analysis chromatogram using Chemstation software.

For the aliphatic fraction, use the following compounds as carbon range markers:

Range	Compound	EC
C9-C12	n-Nonane	9.0
	n-Dodecane	12.0
C12-C16	n-Dodecane + 0.1 min	
	n-Hexadecane	16.0
C16-C21	n-Hexadecane + 0.1 min	
	n-Heneicosane	21.0
C21-C40	n-Heneicosane + 0.1min	
	n-Tetracontane	40.0

(Please note: The "+ 0.1 minutes" noted above in the aliphatic fractions are maximums. Less than the "compound + 0.1 minute" as the carbon range marker can be use if peak shape and chromatographic resolution are favorable.)

8.1.2.5 Choose and save the desired method, based on the instrument date. Load the mid level calibration standard data file. Select Quant, calculate/generate report. Select Quant, Qedit quant results. Verify or integrate all compounds based on RT. Exit and save. Update retention times and save the method. Thereafter, load each data file of the standards and quantitate with the new saved method. Edit each file and make sure each compound is properly identified then update the curve using the EnviroQuant Software. To update the quant method with the responses of each standard, from the EnviroQuant menu, select InitCal, click on Quick Levels Update, Clear Old Response, No to requant files before update, Single data File/Level and add each data file as per their concentration levels to the new quant method.

Note: For the carbon ranges, the quant method responses are updated by tabulating the summation of the peak areas of all the compounds in each carbon range. The areas for the surrogates must be subtracted out from the area summation of the range in which they elute. Also, any areas associated with naphthalene and 2-methylnaphthalene in the aliphatic fraction must be subtracted out from the appropriate carbon range.

8.1.2.6 Once the initial calibration is updated, save the method. Select InitCal, Response Factor to Screen or printer. Once an acceptable curve is verified as per the criteria of the method (below), select InitCal, Response Factors to CSV(form6). From the PC window, locate and double click on the EnvForms. Select import data, click on Retrieve Data. Double click on the directory and instrument where data file is located and run the program. Once the program has been run, print the initial calibration standard form6 and the run log and make sure all criteria are met as follows:

8.1.2.7 If the RSD is $\leq 25\%$ for each compound, surrogates and the carbon range, then the response of the instrument is considered linear and the mean calibration factor can be used to quantitate sample results. If the RSD is greater than 25% for any compound, then the source of the problem must be identified and corrected and a new curve need to be reanalyzed.

8.2 Initial Aliphatic calibration for samples not requiring fractionation (EPH NJDEP CAT 1 and CAT 2).

8.2.1 Set up the sample introduction system as outlined in Sec. 5.1.1. Prepare calibration standards using the procedures described above (Sec. 6.6 and 6.7).

8.2.2 External standard calibration procedure for the aliphatic standard calibration Mix A:

8.2.2.1 The calibration procedure begins with determining the area attributable to column bleed by injecting 1uL of a Methylene chloride blank for the aliphatic fraction analysis. When processing results, the integration area of each of the total carbon ranges is determined and subtracted out from all samples when calculating sample concentrations). Add 1mL of Methylene chloride to an auto sampler vial.

8.2.2.2 Load the Methylene chloride vial, calibration standard vials for mix A (prepared in Sec. 6.6) and the ICV (prepared in Sec. 6.7) on the auto sampler tray. Using the Chemstation software, select the instrument (i.e. GC #8). Select the correct method, then edit. Follow the HP Chemstation software to set and save the instrument method by following the acquisition parameters defined in Section 8.1.

8.2.2.3 Select sequence. Edit sequence log table, entering sample information (name, vial position, data file). Save sequence and select run sequence.

8.2.2.4 Once the analysis of the Methylene chloride blank and the calibration standards are complete, calculate the calibration factor (CF) and the percent relative standard deviation (%RSD) of the CF for each individual compound and surrogate, and in addition to separate CF for each carbon range of interest. Calculate the CFs for the C9-C28, >C28-C40, C9-C40 Aliphatic Hydrocarbon carbon ranges from the appropriate aliphatic analysis chromatogram using Chemstation software.

For the aliphatic fraction, use the following compounds as carbon range markers:

Range	Compound	EC
C9-C28	n-Nonane	9.0
	n-Octacosane	28.0
>C28-C40	n-Octacosane + 0.1 min	
	n-Tetracontane	40.0
C9-C40	n-Nonane	
	n-Tetracontane	40.0

(Please note: The "+ 0.1 minutes" noted above in the aliphatic fractions are maximums. Less than the "compound + 0.1 minute" as the carbon range marker can be use if peak shape and chromatographic resolution are favorable.)

8.2.2.5 Choose and save the desired method, based on the instrument date. Load the mid level calibration standard data file. Select Quant, calculate/generate report. Select Quant, Qedit quant results. Verify or integrate all compounds based on RT. Exit and save. Update retention times and save the method. Thereafter, load each data file of the standards and quantitate with the new saved method. Edit each file and make sure each compound is properly identified then update the curve using the EnviroQuant Software. To update the quant method with the responses of each standard, from the EnviroQuant menu, select InitCal, click on Quick Levels Update, Clear Old Response, No to requant files before update, Single data File/Level and add each data file as per their concentration levels to the new quant method.

Note: For the carbon ranges, the quant method responses are updated by tabulating the summation of the peak areas of all the compounds in each carbon range. The areas for the surrogates must be subtracted out from the area summation of the range in which they elute. Also, any areas associated with naphthalene and 2-methylnaphthalene in the aliphatic fraction must be subtracted out from the appropriate carbon range.

8.2.2.6 Once the initial calibration is updated, save the method. Select InitCal, Response Factor to Screen or printer. Once an acceptable curve is verified as per

the criteria of the method (below), select InitCal, Response Factors to CSV(form6). From the PC window, locate and double click on the EnvForms. Select import data, click on Retrieve Data. Double click on the directory and instrument where data file is located and run the program. Once the program has been run, print the initial calibration standard form6 and the run log and make sure all criteria are met as follows:

If the RSD is $\leq$ 25% for each compound, surrogates and each carbon range, then the response of the instrument is considered linear and the mean calibration factor can be used to quantitate sample results. If the RSD is greater than 25% for any compound, then the source of the problem must be identified and corrected and a new curve need to be reanalyzed.

8.3 Initial aromatic calibration for samples requiring fractionation.

8.3.1 The calibration procedure begins with determining the area attributable to column bleed by injecting 1 uL of a Methylene Chloride blank for the aromatic fraction analysis. When processing results, the integration area of each of the four carbon ranges is determined and subtracted out from all samples when calculating sample concentrations). Add 1mL of Methylene Chloride to an auto sampler vial.

8.3.2 Load the Methylene Chloride vial, calibration standard vials (prepared in Sec. 6.7) and the ICV (prepared in Sec. 6.8) on the auto sampler tray. Using the Chemstation software, select the instrument (i.e. GC #8). Select the correct method, then edit. Follow the HP Chemstation software to set and save the instrument method by following the acquisition parameters defined in Section 8.1.

8.3.3 Select sequence. Edit sequence log table, entering sample information (name, vial position, data file). Save sequence and select run sequence.

8.3.4 Once the analysis of the Methylene Chloride blank and the calibration standards are complete, calculate the calibration factor (CF) and the percent relative standard deviation (%RSD) of the CF for each individual compound and surrogate, and in addition to separate CF for each carbon range of interest. Calculate the CFs for the C10-C12, C12-C16, C16-C21 and C21-C36 Aromatic Hydrocarbon carbon ranges from the appropriate aromatic analysis chromatogram using Chemstation software.

For the aromatic fraction, use the following compounds as carbon range markers:

Range	Compound	EC
C10-C12	1,2,3-Trimethylbenzene	10.1
	Naphthalene	11.7
C12-C16	Naphthalene + 0.1 min	
	Acenaphthene	15.5

C16-C21	Acenaphthene + 0.1 min	
	Pyrene	20.8
C21-C36	Pyrene + 0.1min	
	Benzo(g,h,i)perylene +1.0 min	34.01

(Please note: The "+ 0.1 minutes" noted above in the aromatic fractions are maximums. Less than the "compound + 0.1 minute" as the carbon range marker can be use if peak shape and chromatographic resolution are favorable.)

8.3.5 Choose and save the desired method, based on the instrument date. Load the mid level calibration standard data file. Select Quant, calculate/generate report. Select Quant, Qedit quant results. Verify or integrate all compounds based on RT. Exit and save. Update retention times and save the method. Thereafter, load each data file of the standards and quantitate with the new saved method. Edit each file and make sure each compound is properly identified then update the curve using the EnviroQuant Software. To update the quant method with the responses of each standard, from the EnviroQuant menu, select InitCal, click on Quick Levels Update, Clear Old Response, No to requant files before update, Single data File/Level and add each data file as per their concentration levels to the new quant method.

Note: For the carbon ranges, the quant method responses are updated by tabulating the summation of the peak areas of all the compounds in each carbon range. The areas for the surrogates must be subtracted out from the area summation of the range in which they elute.

8.3.6 Once the initial calibration is updated, save the method. Select InitCal, Response Factor to Screen or printer. Once an acceptable curve is verified as per the criteria of the method (below), select InitCal, Response Factors to CSV (form6). From the PC window, locate and double click on the EnvForms. Select import data, click on Retrieve Data. Double click on the directory and instrument where data file is located and run the program. Once the program has been run, print the initial calibration standard form6 and the run log and make sure all criteria are met as follows:

8.3.7 If the RSD is $\leq$ 25% for each compound, surrogates and the carbon range, then the response of the instrument is considered linear and the mean calibration factor can be used to quantitate sample results. If the RSD is greater than 25% for any compound, then the source of the problem must be identified and corrected and a new curve need to be reanalyzed.

8.4 RT windows: Retention time windows are established for each aliphatic compound, each aromatic compound and each surrogate on each GC. This procedure is repeated whenever a new column is installed. The average and SD of the RT is calculated. Absolute RT windows are established for the individual compounds (+ or – 0.05 minutes).

8.5 Initial Calibration Verification (ICV): Once the criteria in Section 8.1- 8.3 have been met, the ICV must be analyzed immediately following initial calibration, before any samples are analyzed. When done acquiring, process the data file of the ICV from Enviroquant.

8.5.1 In Enviroquant, load the data file, select Quant, Calculate/generate report. Recoveries must fall within 70-130%. If any recoveries fail, corrective action must be taken before sample analysis can begin. Corrective action includes, but is not limited to, instrument maintenance, reprepping ICV and/or analyzing a new initial calibration.

8.6 Upon completion of an acceptable initial calibration and ICV, the analysis of a Calibration blank is required by injecting 1uL of Hexane for the aliphatic analysis or Methylene chloride for aromatic analysis fraction, followed by sample analysis, including method blanks and QC samples (MS, MSD, MBS, MBSD, sample DUP). See section 8.7.8 for sample analysis.

8.7 Continuing Calibration verification for the aliphatic analysis or the aromatic analysis.

8.7.1 The working calibration curve and retention times must be verified by the analysis of a 100ppm tandard every 24 hours or every 20 samples and at the end of the analytical sequence, whichever comes first. The verification of a linear calibration is performed using the percent difference calculation.

$$\% \text{ Difference} = \frac{\overline{CF} - CF_v}{\overline{CF}} \times 100$$

The % difference calculated for the calibration verification standard must be within ±30% for each compound and surrogates, ±25% for each carbon range before any sample analyses may take place.

8.7.2 Calibration verification of a non-linear calibration is performed using percent drift calculation:

$$\% \text{ Drift} = \frac{\text{Calculated concentration - Theoretical concentration}}{\text{Theoretical concentration}} \times 100$$

The % drift calculated for the calibration verification standard must be within ±25% for each carbon range and ±30% for each compound before any sample analyses may take place.

8.7.3 The surrogate in the calibration verification analyses must fall within previously established retention time windows. If the retention time does not fall within the ± 3σ window, take corrective taken to restore the system (i.e. instrument maintenance) or a new calibration curve must be prepared and analyzed.

8.7.4 Upon completion of the continuing calibration verification standard, load the data file. Select the initial calibration method, Quant, Calculate/generate report. Verify that all compounds meet the requirements of Sections 8.7.1 and/or 8.7.2.

8.7.5 The analysis of a Hexane blank for the aliphatic analysis or Methylene Chloride for the aromatic analysis is required after the continuing calibration verification standard. The blank must be analyzed every 24 hours or after every continuing calibration verification for the analysis of any sample and is used to determine the baseline area, or column bleed.

8.7.6 Surrogate Standards (SS) - The SS responses and retention times in the calibration check standard must be evaluated during or immediately after data acquisition. If the retention time(s) for the SS is outside the determined RT window, the chromatographic system must be inspected for malfunctions and corrections must be made. If the area(s) for the SS changes by +/- 50% from the last daily calibration standard check, the GC must be inspected for malfunctions and corrections must be made.

8.7.7 Mass Discrimination

8.7.7.1 Mass discrimination can take place in the injection port. The heavier molecules do not enter the column as a defined plug of vapor with the lighter molecules.

8.7.7.2 Placing a small plug of silanized glass wool one centimeter from the base of the glass injection liner minimizes Mass discrimination. The end of the capillary column is placed just below the glass wool. The capillary column should be placed flush with the surface of the gold seal. A full range alkane standard should be run to test the degree of mass discrimination before performing any actual sample analyses. The response factor ratio of C30/C20 must be greater than 0.8. If less than 0.8, the column should be repositioned until the mass discrimination is minimized.

8.7.8 Sample analysis

8.7.8.1 After all criteria have been met for the initial calibration and ICV or daily continuing calibration standard, the analysis of a Calibration blank is required by injecting 1uL of Hexane for the aliphatic analysis or Methylene chloride for aromatic analysis fraction, followed by sample analysis, including method blanks and QC samples (MS, MSD, MBS, MBSD). All sample extracts must be allowed to warm to ambient temperature before injection on the GC system. Using the Chemstation software, select the instrument (i.e. GC #8). Select sequence. Edit sequence log table, entering sample information (name, vial position, data file). Save sequence. Select position and run, select the specific line (the desire vial position), select run sequence.

8.7.8.2 Once the analysis of the samples, blanks and qc samples is completed, from the EnviroQuant software, load the continuing calibration file in order to load the correct quantitation method file or the quantitation method file can simply be loaded from The EnviroQuant software by selecting method and load the correct quantitation file. Load the data file to be quantitated, select Quant, Calculate/Generate Report, OK. To quantitate multiple data files extracts. Select Jobs, Report Destination, Start Report Manager, OK, RPT1, OK. Select Jobs again, Queue Quant List of Files, Quant No Report, select the data files to be quantitated, process.

8.7.8.3 Once the files have been processed, return to report manager and select start. When all files have been quantitated. From EnviroQuant, load and generate to the printer the continuing calibration standard. Load each data file, select Quant, Qedit Quant Result. For the carbon ranges, use the carbon range markers to integrate horizontally each carbon range. Exit and save the data file. If the initial analysis of a sample has a concentration of any compound that exceeds the initial calibration range, the sample must be reanalyzed at higher dilution.

8.7.8.4 After the completion process of all Qedting of the samples, Double click on the EnvForms. Select import data. Click on Retrieve Data (GC), double click on the directory and instrument where the data files are located and run the program. Once the program has been run, associate the appropriate MBSs with their proper MS and MSD and the sample that was spiked, select send to Lims, print Run Log, surrogates form2, spike form3. Verify that all QC criteria are met before reporting any data from the analytical sequence.

8.8 Calculations

8.8.1 External standard calibration - The concentration of each carbon range for each fraction in the sample is to be determined by calculating the amount of analyte injected, from the peak response, using the calibration factor. The areas of each carbon range that was associated from the blank of hexane or Methylene chloride and the area of the surrogates must be subtracted from their corresponding carbon range summed area. Additionally, any areas associated with naphthalene and/or 2-methylnaphthalene in an aliphatic carbon range are to be subtracted from the appropriate aliphatic carbon range summed area prior to calculating the calibration factors. The concentration of a specific carbon range is calculated as follows:

8.8.1.1 Aqueous samples

$$C(ug/L) = \frac{(A)(D)(V_e)}{CF(V_s)}$$

Where:

C = Concentration of each Hydrocarbon Carbon Range (or EPH), ug/L

A = Area response of each Carbon Range (or EPH) to be measured.

D = Dilution Factor

V_s = Volume of sample, L

V_e = Final volume of the extract

CF = Calibration Factor of each carbon range for each fraction (see section 7.1.2)

Where:

$$CF = \frac{Summed\ area\ of\ peaks\ in\ carbon\ range}{Total\ concentration\ injected\ (ng/L)}$$

8.8.1.2 Nonaqueous samples

$$C(ug/g) = \frac{(A)(D)(V_e)}{CF(S)}$$

Where:

C = Concentration of each Hydrocarbon Carbon Range (or EPH) ug/g (dry weight basis)

A = Area response of each Carbon Range or EPH to be measured.

D = Dilution Factor

Ve = Final volume of the extract

CF = Calibration Factor of each carbon range for each fraction (see section 7.1.2).

Where:

$$CF = \frac{Summed\ area\ of\ peaks\ in\ carbon\ range}{Total\ concentration\ injected\ (ng\ /\ uL)}$$

S =Dry sample weight, grams

8.8.2 Total EPH Concentration = Total of the 4 Aromatic carbon ranges and 4 Aliphatic carbon ranges.

8.9 Percent Recovery of Surrogate Standard (s)

Percent recovery based on External Calibration

$$\%SS\ Recovery = \frac{C_{of}}{C_{ot}} * 100$$

Where:

C_{of} = Concentration of surrogate found
C_{ot} = Concentration of surrogate added.

8.10 Percent Solids (P)

$$P = \frac{D_s}{T_s} * 100$$

Where:

D_s = Weight dry Sample, g

T_s = Weight wet Sample, g

8.11 Dry Weight (S)

$$S = \frac{Wet\ Weight\ x\ P}{100}$$

Where: P = Percent solids

9.0 QUALITY CONTROL

9.1 At the beginning of each analytical run and every 24 hours or 20 samples, Methylene chlorides blank for aromatic analysis or Hexane for aliphatic analysis must be run to determine the area attributed to column bleed. This area must be subtracted from all samples. The area response must be within + or – 20% of the initial baseline response.

9.2 A Method Blank (prep blank) is extracted at a frequency of at least one for each group of up to 20 samples prepared at the same time, by the same procedure. The method blank is used to determine if any interferences were extracted. The concentration of any compound in the blank must not be greater than 5X the MDL. If the concentration is greater than 5X the MDL, and the sample concentration is greater than 10x the blank, reextraction is not necessary. If the concentration in the sample is less than 10x the blank, then reextraction is necessary.

9.3 Surrogate recoveries: Interim Surrogate recovery limits are specified below. Laboratory generated limits will be established after a minimum of 20 data points are collected. If any one surrogate falls outside the limits due to co elution or if the sample extract was diluted, reanalysis is not needed.

Aqueous Samples/Soil Samples	
(COD)-1-Chlorooctadecane (Aliphatic)	40-140%
(OTP)-o-Terphenyl (Aromatic)	40-140%

9.3.1 If the recovery of COD is recovered low, outside QC limits and/or is observed in the aromatic fraction and/or OTP is recovered low, outside QC limits and/or is observed in the aliphatic fraction, the sample must be refractionated using the remaining 1ml extract and analyzed. If the refractionated sample still indicates low surrogate recoveries, re-extraction of the sample will be required.

9.3.2 If the reextracted sample surrogate recoveries are within QC limits, report only the reextracted sample results. If the reextracted sample surrogate recoveries are outside QC limits (confirming matrix effect), report the original sample results and document in nonconformance summary.

9.4 A Matrix Spike Duplicate (MS) must be extracted and analyzed with each prep batch up to 20 samples of the same matrix. Interim QC limits are 40%-140% for each carbon range (RPD should be ±50%). Laboratory generated limits will be established after a minimum of 20 data points are collected. Reextraction or reanalysis is not necessary as long as the MBS and MBSD meet all QC criteria.

9.4.1 A Sample Duplicate must be extracted and analyzed with each prep batch up to 20

samples of the same matrix. The results should not differ by more than 50 %. A matrix spike duplicate may be used if no positive EPH samples are in the batch.

9.5 MBS/MBSD - For each analytical batch (up to 20 samples of a similar matrix) the laboratory must analyze a method blank spike (MBS) and method blank spike duplicate (MBSD). The recovery of the MBS and MBSD must be 40% - 140%. Lower recoveries are permissible for n-Octane but the recoveries must be greater than 25% and must be noted in the case narrative. The standard used for MBSs must be of different source from that used for the calibration standards. The recoveries of each of the carbon ranges as well as the individual recoveries must be reported. The Analytical batch precision is determined from the Relative Percent Difference (RPD) of the concentrations (not the recoveries) of the MBS/MBSD pair. The RPDs for the aliphatic and aromatic carbon range concentrations (the sum of the individual compounds' concentrations within a carbon range) must be ≤25%.

9.5.1 Each fractionation Aliphatic sample and QC sample are evaluated for potential breakthrough on a sample-specific basis by evaluating the %recovery of the fractionation surrogates and on a batch-specific basis by qualifying the concentrations of Naphthalene and 2-Methylnaphthalene in both the aliphatic and the aromatic fractions of the MBS and MBSD. Because Naphthalene and 2-Methylnaphthalene are weakly polar, these compounds can easily mobilize into the aliphatic fraction with excessive volume of hexane, therefore it is essential to monitor the presence of these two compounds in the aliphatic fraction in the MBS and MBSD. If either the concentration of Naphthalene or 2-Methylnaphthalene in the aliphatic fraction exceeds 5% of the total concentration for Naphthalene or 2-Methylnaphthalene in MBS and MBSD, then the MBS, MBSD and any sample extract that was fractionated together with the MBSs must be refractionated and reanalyzed.

Note: The total concentration for Naphthalene or 2-Methylnaphthalene in the MBS and MBSD pair includes the summation of the concentration detected in the aliphatic and aromatic fractions.

Example of Naphthalene % Breakthrough Calculation
Naphthalene in aromatic fraction = 50
Naphthalene in aliphatic fraction = 1.5
Total naphthalene concentration = 51.5

% Naphthalene Breakthrough = 1.5/51.5x100=2.9%

9.5.2 If the fractionation surrogate recovery for either compound is outside 40%-140% for any sample extract then fractionation must be repeated on the affected sample.

9.5.3 If the MBS and MBSD spiking compounds fall outside the QC criteria after refraction

and reanalysis then all samples associated with the QC must be reextracted and reanalyzed, volume permitting.

9.6 Demonstration of Capability (DOC): The analyst must make an initial and yearly demonstration of ability to generate acceptable accuracy and precision data. The analyst must perform the following operation:

9.6.1 Seven quality control check samples (MBS) containing 50 ppm of all compounds (obtained from an external or second source) must be prepared and analyzed.

9.6.2 Calculate the average recovery (X) and the standard deviation of the recovery (s) Using the seven results. The average recovery for each compound must be ±40%. Until acceptable performance is demonstrated, sample analysis may not begin.

9.7 MDL and MDL verification: An MDL study must be performed annually. Seven replicate standards are extracted and analyzed. Once the MDL is calculated (see SOP No. 1009), an MDL verification standard must be extracted and analyzed at a concentration that is 2 – 3 times the calculated MDL.

10.0 SAFETY

10.1 Handle all chemicals appropriately. The toxicity or carcinogenicity of each reagent used in this method has not been defined precisely. Each chemical compound should be treated as a potential health hazard. Exposure to these chemicals must be reduced to the lowest possible level by whatever means available.

10.2 Wear the appropriate protective clothing (Safety glasses, laboratory coat, and gloves)

11.0 NONCONFORMANCE AND CORRECTIVE ACTION

11.1 Any unplanned deviation from this procedure must be documented on a nonconformance memo.

12.0 RECORD MAINTENANCE

12.1 All raw data files are kept on magnetic media for a minimum of 5 years.

12.2 All hard copy packages are filed and saved for a minimum of 5 years.

12.3 All run logbooks, standard prep logbooks, refrigerator logs, extraction logs are saved for a minimum of 5 years.

13.0 POLLUTION PREVENTION

13.1 The chemicals needed for these analyses are purchased as needed, therefore eliminating the disposal of unused expired standards.

13.2 The sample bottles provided are appropriate to obtain a representative sample, but limit the amount of sample required for disposal.

14.0 WASTE MANAGEMENT

14.1 Samples and chemicals are disposed of following the procedures outlined in SOP 7003 (Sample Storage and Disposal).

14.2 Solvent extracts are dumped into appropriate solvent waste drums for disposal.

TABLE 1

REPORTING LIMITS

Compound	RL (mg/kg)
>C12-C16 Aliphatics	30
>C16-C21 Aliphatics	30
>C21-C40 Aliphatics	30
C9-C12 Aliphatics	30
>C10-C12 Aromatics	30
>C12-C16 Aromatics	30
>C16-C21 Aromatics	30
>C21-C36 Aromatics	30

SOP REVISION LOG

SOP NUMBER 6011

DATE	REV. #	INITIALS	REVISION
2/4/10	1	JR	Section 2.0 – added reference to Method 8015B
		JR	Section 6.6 – removed double reference to second source std
4/7/10	2	JR	Section 3.4 and 3.5 – corrected numbering of sections
			Section 8.1 moved to 5.1
			Section 6.6 – added 'aliphatic' for clarification
			Section 6.8 – added 'aromatic' for clarification
			Section 6.4 – added compounds
8/27/10	3	JR	Section 3.1 – for non-aqueous samples with >1700 mg/kg EPH, the extracts are then solvent exchanged and fractionated into Aliphatic and Aromatic fractions.
8/27/10	3	JR	Section 6.4 - change to surrogate solution Mix
8/27/10	3	JR	Section 6.6-6.8 - was modified to include standard for non-fractionation samples.
8/27/10	3	JR	Section 8.2 was added to include standard procedure for non-fractionation samples.
			Section 5.1 updated chromatographic conditions
6/4/13	4	RC/AH	Section 5.2 – added additional model number
6/6/13	4	RC/AH	Section 6.9.2 – Updated aromatic calibration - added 120 and 150 PPM, removed 300 and 500PPM
6/6/13	4	RC/AH	Section 8.3.4 – updated the Benzo(ghi)perylene range to 1.0 min
2/20/15	5	RK/EJ	Sec 6.5, 6.6, 6.8, 6.10: changed standards suppliers
2/20/15	5	RK/EJ	Sec 6.7: Updated to reflect current practices.
2/20/15	5	EJ	Table 1: Added reporting limits
4/28/15	6	EJ	Sec 1.3: Added reporting limits.
3/14/16	7	AH/EJ	Sec.5.1.1, 5.7: updated to current lab practices
3/22/16	7	AH/EJ	Sec 6.6.3: added volumes of $MeCl_2$
3/22/16	7	AH/EJ	Sec 8.2.2: changed Hexane to Methylene chloride
3/25/16	7	AH/EJ	Sec 7.1: removed "in the dark"
02/21/17	8	AH/EJ	Sec 6.0: Updated to current lab practices
08/25/17	9	RC	Updated SOP title to reflect correct version of method (3)
08/25/17	9	RC	Section 2.4: updated method reference to correct version of method (3)
06/03/19	10	SRB	Section 2.2: updated method 8015B to 8015D
			Section 7.1: specified refrigeration temp
			throughout: checked spelling, formatting, etc.
06/05/19	10	SRB	Section 5.3: updated column info

Dewberry Standard Operating Procedure (SOP)

Title: pH WATER-FIELD, Measurement of pH for Water in the Field
Method: EPA 150.1/Standard Methods 4500 H
Laboratory Director: Thomas B. Waldron
Date: May 2, 2006
Revised Date:October 4, 2006

1. **Scope and Application**: This method is applicable to the field determination of pH of water samples using the following methods: EPA 150.1 and SM 4500H.

2. **Method Summary** : The pH of a water sample is determined electrometrically using a combination electrode. For each batch of 20 samples or less a duplicate sample is analyzed.

3. **Interferences** : Coatings of oily materials or particulates can impair electrode response. Any coatings may be removed by wiping and rinsing with distilled water. Additional cleaning may be necessary as stated in the manufacturer's manuals.

4. **Apparatus**:

   4.1 Horiba U-22XD Water Quality Meter, Manufacturer Number 5053005. The pH electrode was factory sealed when the Horiba U-22XD was received from the manufacturer.

   4.2 Sample Containers

   4.3 Temperature compensating probe, or combination electrode capable of temperature compensation.

5. **Reagents** :

   5.1 Buffer solutions: pH = 4, 7, 10 (purchased from commercial vendor)

   5.2 Deionized water

6. **Standards: NA**

7. **Sample Handling and Preservation**: pH samples must be run within 15 minutes of collection (Analyze Immediately Parameter). Sample containers should be filled completely prior to analysis.

8. **Safety**:

   8.1 Employees must abide by the policies and procedures in the Corporate Safety Manual and this document.

8.2 Eye protection, lab coat and appropriate gloves must be worn while samples, standards, solvents, and reagents are being handled.

8.3 All questions pertaining to any safety procedure should be brought to the Laboratory Director or Department Health and Safety Manager.

8.4 SPECIFIC SAFETY CONCERNS OR REQUIREMENTS: None

8.5 PRIMARY MATERIALS USED: There are no materials used in this method that have a serious or significant hazard rating. NOTE: This list does not include all materials used in the method. A complete list of materials used in the method can be found in the reagents and materials section. Employees must review the information in the MSDS for each material before using it for the first time or when there are major changes to the MSDS.

9. Calibration Procedure:

9.1 Following manufacturer specifications, calibrate the pH meter(s) daily (or before use) using a 2-point calibration on pH buffers 4.0 and 10.0. The 4 and 10 buffer must be within +/- 0.05 pH units. Record the actual pH values as well as the slope. Read and record the pH 7.0 buffer. The pH 7.0 buffer must fall within +/-0.2 pH units (6.8-7.2) of the true value for the calibration to be considered valid.

9.2 Rinse electrode with deionized water.

9.3 Place in buffer 4.0. Stir constantly until meter is stable.

9.4 Press the “Enter” key after stable.

9.5 Record value and repeat with pH buffer 10.0

9.6 Dispose of buffers immediately after use.

9.7 Record values, time, date and analyst

9.8 If it has been greater than 3 hours since the meter has last been calibrated, the 7.0 buffer must be reread and recorded. Again the pH 7.0 buffer must fall within +/-0.2 pH units (6.8-7.2) of the true value. If the value is outside of this range the meter must be re-calibrated.

10. Measurement Procedure: Following the Dewberry SOP for LFPS, collect a grab groundwater sample of at least 100 mls in a clean container. Record the date and time of collection, the date and time of analysis and the technician initials. (Note: Recording both times verifies that the pH readings were conducted within 15 minutes of collection.) Wash the sensor two or three times with distilled water and immerse a properly calibrated water quality meter into the container. Stir the sample while measuring. Allow the reading to stabilize and record the results. Collect and analyze a duplicate sample for every twenty (20) samples collected.

11. Calculations: No calculations are necessary. Report pH value directly from meter.

12. Quality Control:

12.1 One (1) duplicate pH measurement will be performed for every twenty (20) samples measured. The values should be within +/-0.2 pH units.

12.2 At a minimum of yearly, read a known quality control sample obtained from an outside vendor. The pH must fall within the range specified by the manufacturer.

12.3 As stated above, a daily check and calibration must be performed. In addition, every 3 hours, check with pH buffer 7.0. Result must be +/- 0.2 pH units.

13. Non-Conformance and Corrective Action:

13.1 Any unplanned deviation from this procedure must be documented in a nonconformance memo.

13.2 Errors in pH measurement generally arise from improperly functioning electrodes. If the pH reading is unstable, the electrode junction may be clogged (as evidenced by crystallization of the electrode solution). Clean the electrode and re-calibrate the meter. If the problem persists the electrode may need to be replaced.

13.3 If the pH sensor has become fouled, use a piece of gauze dampened with detergent and wipe off contamination.

14. Record Maintenance:

14.1 The current pH calibration logbook will be kept in the laboratory within easy access to the technician performing the work.

14.2 Once full the logbook will be kept in a laboratory specific indexed archive file. A record of the index will be maintained in the quality control file.

Dewberry Standard Operating Procedure (SOP)

Title: DISSOLVED OXYGEN-FIELD, Measurement of Dissolved Oxygen for Water in the Field
Method: EPA 360.1/Standard Methods 4500 O G
Laboratory Director: Thomas B. Waldron
Date: May 2, 2006
Revised Date:October 5, 2006

1. **Scope and Application**: This method is applicable to the field determination of dissolved oxygen from water samples using the following methods: EPA Method 360.1.

2. **Method Summary**: The current or potential of a sample is correlated with dissolved oxygen concentrations. A duplicate sample is analyzed on a daily basis or every 20 samples whichever is less.

3. **Interferences**:

   3.1 Dissolved inorganic salts and reactive compounds can interfere with the output of the dissolved oxygen probe.

   3.2 Dissolved oxygen probes are temperature sensitive, and temperature compensation is normally provided by the manufacturer.

   3.3 Reactive compounds may interfere with the output or the performance of dissolved oxygen probes. Reactive gases which pass through the membrane probes may interfere. For example, chlorine will depolarize the cathode and cause a high probe-output. Long-term exposures to chlorine will coat the anode with the chloride of the anode metal and eventually desensitize the probe. Alkaline samples in which free chlorine does not exist will not interfere. Hydrogen sulfide will interfere with membrane probes if the applied potential is greater than the half-wave potential of the sulfide ion. If the applied potential is less than the half-wave potential, an interfering reaction will not occur, but coating of the anode with the sulfide of the anode metal can take place.

4. **Apparatus**:

   4.1 Horiba U-22XD Water Quality Meter, Manufacturer Number 5053005.

   4.2 Sample Containers

   4.3 Temperature compensating probe, or combination electrode capable of temperature compensation

5. Reagents:

5.1 Deionized Water: Put 1 or 2 liters of water in a container. Use an air pump to bubble air through the solution until it is oxygen-saturated.

5.2 Wash the probe 2-3 times in the tap water and put it in the span calibration solution.

6. Standards: NA

7. Sample Handling and Preservation: DO samples must be run within 15 minutes of collection (Analyze Immediately Parameter). Sample containers should be filled completely prior to analysis.

8. Safety:

8.1 Employees must abide by the policies and procedures in the Corporate Safety Manual and this document.

8.2 Eye protection, lab coat and appropriate gloves must be worn while samples, standards, solvents, and reagents are being handled.

8.3 All questions pertaining to any safety procedure should be brought to the Laboratory Director or Department Health and Safety Manager.

8.4 SPECIFIC SAFETY CONCERNS OR REQUIREMENTS: None

8.5 PRIMARY MATERIALS USED: There are no materials used in this method that have a serious or significant hazard rating. NOTE: This list does not include all materials used in the method. A complete list of materials used in the method can be found in the reagents and materials section. Employees must review the information in the MSDS for each material before using it for the first time or when there are major changes to the MSDS.

9. Procedure:

9.1 Use a 10mL graduated cylinder to ad 15mL of Deionized Water to the titration tube.

9.2 Use a Direct Reading Titrator, 0-1 Range(1.0mL capacity) to add 2mL of Potassium Bi-iodate.

9.3 Add 2 drops of Sulfuric Acid, 5N.

9.4 use the 0.1g spoon to add 0.2g Potassium Iodide Crystals.

9.5 Swirl to dissolve. Solution will turn yellowish brown.

9.6 Fill another Direct Reading Titrator with Sodium Thiosulfate Solution, 0.025N.

9.7 While gently swirling the tube, add Sodium thiosulfate, 0.02N until the color fades to pale yellow. It will be necessary to refill the Direct Reading Titrator.

9.8 Add 3 drops of Starch Indicator Solution. The solution will turn blue.

9.9 Continue adding Sodium Thiosulfate, 0.025N until the blue color disappears and the solution is colorless.

9.10 Read the test result directly from the scale where the large ring on the Titrator meets the Titrator barrel. Include the value of the original amount dispensed (1mL). If the reading is 2.0 +/- 0.1mL, the Sodium Thiosulfate, 0.025N is satisfactory. If not, discard and replace with new reagent.

10. <u>Calibration:</u>

10.1 Turn on the Horiba U-22XD Water Quality Meter, allowing the probe to polarize and the temperature to stabilize before calibrating.

10.2 Set the Horiba U-22XD unit for fresh water readings. Set the S.SET Sub-Mode to 0.0%.

10.3 Use the "MODE" Key to move the lower cursor to SPAN.

10.4 After the readout has stabilized, while slowly moving the probe up and down in the solution, set the readout value to the appropriate DO value for the temperature of this solution. For DO values at various temperatures, refer to the Horiba Instruction Manual, Section 3, Page 34.

10.5 Press "ENT" Key to complete the calibration for DO.

10.6 Press "MODE" to return to the Main Mode. The instrument is now calibrated and ready to measure dissolved oxygen and temperature.

11. <u>Measurement Procedure</u>: Following the Dewberry SOP for LFPS, collect a grab groundwater sample of at least 100 mls in a clean container. Record the date and time of collection, the date and time of analysis and the technician initials. (Note: Recording both times verifies that the DO readings were conducted within 15 minutes of collection.) Wash the sensor two or three times with distilled water and immerse a properly calibrated water quality meter into the container. Allow the reading to stabilize and record the results.

12. Calculations: No calculations are necessary. Report DO value directly from meter.

13. Quality Control:

13.1 A duplicate is analyzed once per day or every twenty samples whichever is less.

13. Nonconformance Summary and Corrective Action: Data that fails to meet minimum acceptance criteria will be annotated (flagged) with qualifiers and/or appropriate narrative comments defining the nature of the outage. If applicable, a Corrective Action Report will be initiated in order to provide for investigation and follow-up.

Dewberry Standard Operating Procedure (SOP)

Title: TEMPERATURE-FIELD, Measurement of Temperature in the Field
Method: EPA 170.1/Standard Methods 2550B
Laboratory Director: Thomas Waldron
Date: May 2, 2006
Revision Date: October 9, 2006

1. **Scope and Application**: This method is applicable to the field determination of temperature of water samples using the following methods: EPA Method 170.1 and Standard Method 4500H.

2. **Sample Handling and Preservation**: Samples measured for temperature samples must be run within 15 minutes of collection (Analyze Immediately Parameter).

3. **Apparatus**:

   3.1 Horiba U-22XD Water Quality Meter, Manufacturer's Model Number 5053005.

   3.2 NIST Thermometer.

   3.3 Sample Containers.

4. **Calibration Procedure:** Our in house water quality meter is calibrated quarterly per manufacturer specifications against the NIST thermometer listed in the Apparatus section above. Calibration is done by placing the NIST thermometer in the same location and conditions (in an incubator or a refrigerator or into a ice bath) as the in house water quality meter.

   The temperature readings are determined and recorded for both thermometer and water quality meter. Date and name of technician conducting the calibration and the serial numbers of meters are recorded in a journal. If the temperature readings are not the same then a correction factor is determined and used to adjust the temperature reading collected from the in house water quality meter.

   If the NIST read 20.1°C and the in house read 20.5°C then the correction factor would be –0.4°C. Any temperature readings obtained from that in house water quality meter would have 0.4° taken off the reading before reporting. Records are maintained for all correction factors.

5. **Maintenance**: Daily and monthly maintenance is performed per manufacturer instructions.

6. **Measurement Procedure**: Following the Dewberry SOP for LFPS, collect a grab groundwater sample of at least 100 ml in a clean container. Record the date and time of collection, the date and time of analysis and the technician initials. (Note: Recording both times verifies that the temperature readings were conducted within 15 minutes of collection.) Immerse a properly calibrated water quality meter into the container. Allow the reading to stabilize and record the results (apply any appropriate correction factors).

7. **Quality Control**:

   7.1 Glass thermometers must be calibrated yearly using the NIST certified thermometer.

   7.2 A duplicate is analyzed on a daily basis or every 20 samples whichever is less.

   7.3 The digital thermometer will be calibrated quarterly to the N.I.S.T. thermometer.

8. **Nonconformance Summary:** Data that fails to meet minimum acceptance criteria will be annotated (flagged) with qualifiers and/or appropriate narrative comments defining the nature of the outage. If applicable, a Corrective Action Report will be initiated in order to provide for investigation and follow-up.

Groundwater Sampling Using Low-Flow Purge and Sampling
Dewberry Standard Operating Procedure

This Standard Operating Procedure has been prepared to enable the reader to properly purge a groundwater well and sample it using the low-flow methods defined by the U.S. Environmental Protection Agency (USEPA) and New Jersey Department of Environmental Protection (NJDEP).

This method should be used for sampling metals only unless otherwise dictated by a project manager. Sampling and analysis for compounds other than metals using low-flow purge methods requires work plan approval by the NJDEP. Sampling for metals has become an accepted method by the State. Essentially, the benefit of low-flow purge and sampling is that suspended solids found in over-pack and adjacent substrate do not become mixed in water thereby altering metals concentrations through physical and chemical processes.

Equipment

-Adjustable rate, positive displacement pump (i.e.; peristaltic or Grundfos® submersible pumps with variable speed motor)
-Power source (generator) for pump
-Disposable Teflon tubing (dedicated to each well)
-Electronic water level measuring device
-Photoionization detector (PID)
-Flow measurement vessel (graduated cylinder) and stop watch
-Monitoring device (i.e.; Horiba U-22) with flow through cell for water quality parameters*
-Decontamination supplies:
    wash basins, brushes, detergent (i.e.; Alconox), tap/distilled/deionized water, alcohol, acid (when sampling aqueous for metals), containers for waste water storage, and polyethylene sheeting)
-Log book
-Bungee cords
-Sample bottles for respective analysis with preservatives when applicable
-Coolers and zip lock style plastic bags for ice and sample bottle containment for transport
-Chain of custody and labeling for samples
-Approved Field Sampling & QA/QC plan
-Approved Health & Safety Plan

*Water quality parameters: temperature, pH, specific conductance, turbidity, dissolved oxygen, and redox)

Pre-sampling Procedure

(1) Record in log book the weather conditions, site investigator(s) names, well identification, and other pertinent site information.

(2) Check well for damage to casing, lock, etc. and record any in log book if observed.

(3) Measure VOCs at well head with PID prior to opening well. Open well head and measure VOCs again.

(4) Measure depth to water, free-product thickness if present and depth of well. If product is present do not perform low-flow purging. If free-product is not present then measure depth to water and total well depth (well depth changes over time due to sediment accumulation, this also determines that nothing is obstructing the well column).

Sampling Procedure

(1) Lower pump with attached tubing and power line into well at the approximate center of the saturated screened interval. Set the pump intake such that the intake is at least two feet above the bottom of the well so it does not uptake sediment or disturb settled solids. In order to lower the assembly to the proper depth, either measure tubing based on desired interval prior to attaching to pump or lower entire assembly into well with measuring device at same time.

(2) Measure the depth to water again prior to pumping. This will be monitored during purge and ideally minimal draw down will occur or stabilization should occur.

(3) At five minute intervals, record water level, water quality parameters and flow rate. A separate standardized table should be used for records of each well.

(4) Purge rate should be maintained at 200 to 500 milliliters per minute. Below 200 ml/min pumps can run too hot and alter water quality parameters.

To measure flow/purge rate use a stop watch and a graduated cylinder. First make sure flow through cell is stable and will not fall down, if need be, bungee cord it to the well or some other fixed object. Connect a two foot section of tubing to the out flow nipple on the flow through cell to make measuring easier. Place graduated cylinder under outflow and simultaneously start stop watch. Measure flow initially until you obtain 200 to 500 ml/min. Then measure flow in this manner each 5 minutes when recording water quality parameters.

(5) Water quality is considered stable when three consecutive readings are observed within +/- 0.1 for pH, +/- 3% for conductivity, +/- 10 mV for redox potential, and +/- 10% for turbidity and dissolved oxygen.

(6) Sample VOCs first then others jars can be filled and stored.

(7) Measure depth to water and reseal/lock the well.

SOIL GAS SAMPLING

SOP#: 2042
DATE: 06/01/96
REV. #: 0.0

1.0 SCOPE AND APPLICATION

Soil gas monitoring provides a quick means of waste site evaluation. Using this method, underground contamination can be identified, and the source, extent, and movement of the pollutants can be traced.

This standard operating procedure (SOP) outlines the methods used by U.S. EPA/ERT in installing soil gas wells; measuring organic vapor levels in the soil gas using a Photoionization Detector (PID), Flame Ionization Detector (FID) and/or other air monitoring devices; and sampling the soil gas using Tedlar bags, Tenax sorbent tubes, and/or Summa canisters.

These are standard (i.e., typically applicable) operating procedures which may be varied or changed as required, dependent on site conditions, equipment limitations or limitations imposed by the procedure. In all instances, the ultimate procedures employed should be documented and associated with the final report.

Mention of trade names or commercial products does not constitute U.S. EPA endorsement or recommendation for use.

2.0 METHOD SUMMARY

A 3/8" diameter hole is driven into the ground to a depth of four to five feet using a commercially available slam bar. Soil gas can also be sampled at other depths by the use of a longer bar or bar attachments. A 1/4" O.D. stainless steel probe is inserted into the hole. The hole is then sealed around the top of the probe using modeling clay. The gas contained in the interstitial spaces of the soil is sampled by pulling the sample through the probe using an air sampling pump. The sample may be stored in Tedlar bags, drawn through sorbent cartridges, or analyzed directly using a direct reading instrument. The air sampling pump is not used for Summa canister sampling of soil gas. Sampling is achieved by soil gas equilibration with the evacuated Summa canister.

Other field air monitoring devices, such as the combustible gas indicator (MSA CGI/02 Meter, Model 260) and the Organic Vapor Analyzer (Foxboro OVA, Model 128), can also be used dependent on specific site conditions. Measurement of soil temperature using a temperature probe may also be desirable. Bagged samples are usually analyzed in a field laboratory using a portable Photovac GC.

Power driven sampling probes may be utilized when soil conditions make sampling by hand unfeasible (i.e., frozen ground, very dense clays, pavement, etc.). Commercially available soil gas sampling probes (hollow, 1/2 ≈ O.D. steel probes) can be driven to the desired depth using a power hammer (e.g., Bosch Demolition Hammer or Geoprobe™). Samples can be drawn through the probe itself, or through Teflon tubing inserted through the probe and attached to the probe point. Samples are collected and analyzed as described above.

3.0 SAMPLE PRESERVATION, CONTAINERS, HANDLING, AND STORAGE

3.1 Tedlar Bags

Soil gas samples are generally contained in 1.0-L Tedlar bags. Bagged samples are best stored in dark plastic bags placed in coolers to protect the bags from any damage that may occur in the field or in transit. In addition, coolers insure the integrity of the samples by keeping them at a cool temperature and out of direct sunlight. Samples should be analyzed as soon as possible, preferably within 24 - 48 hours.

3.2 Tenax Tubes

Bagged samples can also be drawn onto Tenax or

other sorbent tubes to undergo lab GC/MS analysis. If Tenax tubes are to be utilized, special care must be taken to avoid contamination. Handling of the tubes should be kept to a minimum and only while wearing nylon or other lint-free gloves. After sampling, each tube should be stored in a clean, sealed culture tube; the ends packed with clean glass wool to protect the sorbent tube from breakage. The culture tubes should be kept cool and wrapped in aluminum foil to prevent any photodegradation of samples (see Section 7.4.).

3.3 Summa Canisters

The Summa canisters used for soil gas sampling have a 6 liter sample capacity and are certified clean by GC/MS analysis before being utilized in the field. After sampling is completed, they are stored and shipped in travel cases.

4.0 INTERFERENCES AND POTENTIAL PROBLEMS

4.1 PID Measurements

A number of factors can affect the response of a PID (such as the HNu PI 101). High humidity can cause lamp fogging and decreased sensitivity. This can be significant when soil moisture levels are high, or when a soil gas well is actually in groundwater. High concentrations of methane can cause a downscale deflection of the meter. High and low temperature, electrical fields, FM radio transmission, and naturally occurring compounds, such as terpenes in wooded areas, will also affect instrument response.

Other field screening instruments can be affected by interferences. Consult the manufacturers manuals.

4.2 FID Measurements

A number of factors can affect the response of an FID (such as the OVA model 128). High humidity can cause the FID to flame out or not ignite at all. This can be significant when soil moisture levels are high, or when a soil gas well is actually in groundwater. The FID can only read organic based compounds (they must contain carbon in the molecular structure). The FID also responds poorly to hydrocarbons and halogenated hydrocarbons (such as gasoline, propane fuel). High and low temperature, electrical fields and FM radio transmission will also affect instrument response.

4.3 Factors Affecting Organic Concentrations in Soil Gas

Concentrations in soil gas are affected by dissolution, adsorption, and partitioning. Partitioning refers to the ratio of component found in a saturated vapor above an aqueous solution to the amount in the solution; this can, in theory, be calculated using the Henry's Law constants. Contaminants can also be adsorbed onto inorganic soil components or "dissolved" in organic components. These factors can result in a lowering of the partitioning coefficient.

Soil "tightness" or amount of void space in the soil matrix, will affect the rate of recharging of gas into the soil gas well.

Existence of a high, or perched, water table, or of an impermeable underlying layer (such as a clay lens or layer of buried slag) may interfere with sampling of the soil gas. Knowledge of site geology is useful in such situations, and can prevent inaccurate sampling.

4.4 Soil Probe Clogging

A common problem with this sampling method is soil probe clogging. A clogged probe can be identified by using an in-line vacuum gauge or by listening for the sound of the pump laboring. This problem can usually be eliminated by using a wire cable to clear probe (see Section 7.1.3.).

4.5 Underground Utilities

Prior to selecting sample locations, an underground utility search is recommended. The local utility companies can be contacted and requested to mark the locations of their underground lines. Sampling plans can then be drawn up accordingly. Each sample location should also be screened with a metal detector or magnetometer to verify that no underground pipes or drums exist.

5.0 EQUIPMENT/APPARATUS

5.1 Slam Bar Method

- C Slam Bar (1 per sampling team).
- C Soil gas probes, stainless steel tubing, 1/4" O.D., 5 ft length.
- C Flexible wire or cable used for clearing the

tubing during insertion into the well.

- C "Quick Connect" fittings to connect sampling probe tubing, monitoring instruments, and Gilian pumps to appropriate fittings on vacuum box.
- C Modeling clay.
- C Vacuum box for drawing a vacuum around Tedlar bag for sample collection (1 per sampling team).
- C Gilian pump Model HFS113A adjusted to approximately 3.0 L/min (1 to 2 per sample team).
- C 1/4" Teflon tubing, 2 ft to 3 ft lengths, for replacement of contaminated sample line.
- C 1/4" Tygon tubing, to connect Teflon tubing to probes and quick connect fittings.
- C Tedlar bags, 1.0 L, at least 1 bag per sample point.
- C Soil Gas Sampling labels, field data sheets, logbook, etc.
- C PID/FID, or other field air monitoring devices, (1 per sampling team).
- C Ice chest, for carrying equipment and for protection of samples (2 per sampling team).
- C Metal detector or magnetometer, for detecting underground utilities/pipes/drums (1 per sampling team).
- C Photovac GC, for field-lab analysis of bagged samples.
- C Summa canisters (plus their shipping cases) for sample, storage and transportation.
- C Large dark plastic garbage bags

5.2 Power Hammer Method

- C Bosch demolition hammer.
- C 1/2" O.D. steel probes, extensions, and points.
- C Dedicated aluminum sampling points.
- C Teflon tubing, 1/4".
- C "Quick Connect" fittings to connect sampling probe tubing, monitoring instruments, and Gilian pumps to appropriate fittings on vacuum box.
- C Modeling clay.
- C Vacuum box for drawing a vacuum around Tedlar bag for sample collection (1 per sampling team).
- C Gilian pump Model HFS113A adjusted to approximately 3.0 L/min (1 to 2 per sample team).
- C 1/4" Teflon tubing, 2 ft to 3 ft lengths, for replacement of contaminated sample line.
- C 1/4" Tygon tubing, to connect Teflon tubing to probes and quick connect fittings.
- C Tedlar bags, 1.0 L, at least 1 bag per sample point.
- C Soil Gas Sampling labels, field data sheets, logbook, etc.
- C HNu Model P1101, or other field air monitoring devices, (1 per sampling team).
- C Ice chest, for carrying equipment and for protection of samples (2 per sampling team).
- C Metal detector or magnetometer, for detecting underground utilities/pipes/drums (1 per sampling team).
- C Photovac GC, for field-lab analysis of bagged samples.
- C Summa canisters (plus their shipping cases) for sample, storage and transportation.
- C Generator w/extension cords.
- C High lift jack assembly for removing probes.

5.3 Geoprobe™ Method

The Geoprobe is a hydraulically-operated sampling device mounted in a customized four-wheel drive vehicle. The sampling device can be deployed from the truck and positioned over a sample location. The base of the sampling device is positioned on the ground. The weight of the vehicle is hydraulically raised on the base. As the weight of the vehicle is transferred to the probe, the probe is pushed into the ground. A built-in hammer mechanism allows the probe to be driven past some dense stratigraphic horizons. When the probe reaches the sample depth, up to 50 feet under favorable geologic situations, samples can be collected.

Soil gas can be collected from specific depths in two general ways. One method involves withdrawing a sample directly from the probe rods, after evacuating a sufficient volume of air from the probe rods. The other method involves collecting a sample through tubing attached by an adaptor to the bottom probe rod section. Correctly used, this method provides more reliable results. Manufacturer's instructions and the SOP for the Model 5400 Geoprobe™ Operation should be followed when using this method.

6.0 REAGENTS

- C PID/FID or calibration gases for field air monitoring devices (such as methane and

isobutylene).

- C Deionized organic-free water, for decontamination.
- C Methanol, HPLC grade, for decontamination.
- C Ultra-zero grade compressed air, for field blanks.
- C Standard gas preparations for Photovac GC calibration and Tedlar bag spikes.
- C Propane Torch (for decontamination of steel probes)

7.0 PROCEDURES

7.1 Soil Gas Well Installation

1. Initially a hole slightly deeper than the desired depth is made. For sampling up to 5 feet, a 5-ft single piston slam bar is used. For deeper depths, a piston slam bar with threaded 4-foot-long extensions can be used. Other techniques can be used, so long as holes are of narrow diameter and no contamination is introduced.

2. After the hole is made, the slam bar is carefully withdrawn to prevent collapse of the walls of the hole. The soil gas probe is then inserted.

3. It is necessary to prevent plugging of the probe, especially for deeper holes. A metal wire or cable, slightly longer than the probe, is placed in the probe prior to inserting into the hole. The probe is inserted to full depth, then pulled up three to six inches, then cleared by moving the cable up and down. The cable is removed before sampling.

4. The top of the sample hole is sealed at the surface against ambient air infiltration by using modeling clay molded around the probe at the surface of the hole.

5. If conditions preclude hand installation of the soil gas wells, the power driven system may be employed. The generator powered demolition hammer is used to drive the probe to the desired depth (up to 12 Ft may be attained with extensions). The probe is pulled up 1-3 inches if the retractable point is used. No clay is needed to seal the hole. After sampling, the probe is retrieved using the high lift jack assembly.

6. If semi-permanent soil gas wells are required, the dedicated aluminum probe points are used. These points are inserted into the bottom of the power driven probe and attached to the Teflon tubing. The probe is inserted as in step 5. When the probe is removed, the point and Teflon tube remain in the hole, which may be sealed by backfilling with clean sand, soil, or bentonite.

7.2 Screening with Field Instruments

1. The well volume must be evacuated prior to sampling. Connect the Gilian pump, adjusted to 3.0 L/min, to the sample probe using a section of Teflon tubing as a connector. The pump is turned on, and a vacuum is pulled through the probe for approximately 15 seconds. Longer time is required for sample wells of greater depths.

2. After evacuation, the monitoring instrument(s) (i.e. HNu or OVA) is connected to the probe using a Teflon connector. When the reading is stable, or peaks, the reading is recorded on soil gas data sheets.

3. Of course, readings may be above or below the range set on the field instruments. The range may be reset, or the response recorded as a greater than or less than figure. Recharge rate of the well with soil gas must be considered when resampling at a different range setting.

7.3 Tedlar Bag Sampling

1. Follow step 7.2.1 to evacuate well volume. If air monitoring instrument screening was performed prior to sample taking, evacuation is not necessary.

2. Use the vacuum box and sampling train (Figure 1) to take the sample. The sampling train is designed to minimize the introduction of contaminants and losses due to adsorption. All wetted parts are either Teflon or stainless steel. The vacuum is drawn indirectly to avoid contamination from sample pumps.

3. The Tedlar bag is placed inside the vacuum box, and attached to the sampling port. The sample probe is attached to the sampling port via Teflon tubing and a "Quick Connect" fitting.

4. A vacuum is drawn around the outside of the bag, using a Gilian pump connected to the vacuum box evacuation port, via Tygon tubing and a "Quick Connect" fitting. The vacuum causes the bag to inflate, drawing the sample.

5. Break the vacuum by removing the Tygon line from the pump. Remove the bagged sample from the box and close valve. Record data on data sheets or in logbooks. Record the date, time, sample location ID, and the PID/FID instrument reading(s) on sample bag label.

CAUTION: Labels should not be pasted directly onto the bags, nor should bags be labeled directly using a marker or pen. Inks and adhesive may diffuse through the bag material, contaminating the sample. Place labels on the edge of the bags, or tie the labels to the metal eyelets provided on the bags. Markers with inks containing volatile organics (i.e., permanent ink markers) should not be used.

Chain of Custody Sheets must accompany all samples submitted to the field laboratory for analysis.

7.4 Tenax Tube Sampling

Samples collected in Tedlar bags may be adsorbed onto Tenax tubes for further analysis by GC/MS.

7.4.1 Additional Apparatus

A. Syringe with a luer-lock tip capable of drawing a soil gas or air sample from a Tedlar bag onto a Tenax/CMS sorbent tube. The syringe capacity is dependent upon the volume of sample begin drawn onto the sorbent tube.

B. Adapters for fitting the sorbent tube between the Tedlar bag and the sampling syringe. The adapter attaching the Tedlar bag to the sorbent tube consists of a reducing union (1/4" to 1/16" O.D. -- Swagelok cat. # SS-400-6-ILV or equivalent) with a length of 1/4" O.D. Teflon tubing replacing the nut on the 1/6" (Tedlar bag) side. A 1/4" I.D. silicone O-ring replaces the ferrules in the nut on the 1/4" (sorbent tube) side of the union.

The adapter attaching the sampling syringe to the sorbent tube consists of a reducing union (1/4" to 1/16" O.D. -- Swagelok Cat. # SS-400-6-ILV or equivalent) with a 1/4" I.D. silicone O-ring replacing the ferrules in the nut on the 1/4" (sorbent tube) side and the needle of a luer-lock syringe needle inserted into the 1/16" side. (Held in place with a 1/16" ferrule.) The luer-lock end of the needle can be attached to the sampling syringe. It is useful to have a luer-lock on/off valve situated between the syringe and the needle.

C. Two-stage glass sampling cartridge (1/4" O.D. x 1/8" I.D. x 5 1/8") contained in a flame-sealed tube (Manufacturer: Supelco Custom Tenax/Spherocarb Tubes) containing two sorbent sections retained by glass wool:

Front section: 150 mg of Tenax-GC
Back section: 150 mg of CMS (Carbonized Molecular Sieve)

These tubes are prepared and cleaned in accordance with EPA Method EMSL/RTP-SOP-EMD-013 by the vendor. The vendor sends ten tubes per lot made to the REAC GC/MS Laboratory and they are tested for cleanliness, precision, and reproductability.

D. Teflon-capped culture tubes or stainless steel tube containers for sorbent tube storage and shipping. These containers should be conditioned by baking at 120 degrees C for at least two hours. The culture tubes should contain a glass wool plug to prevent sorbent tube breakage during transport. Reconditioning of the containers should occur between uses or after extended periods of disuse (i.e., two weeks or more).

E. Nylon gloves or lint-free cloth. (Hewlett Packard Part # 8650-0030 or equivalent.)

7.4.2 Sample Collection

Handle sorbent tubes with care, using nylon gloves (or other lint-free material) to avoid contamination.

Immediately before sampling, break one end of the sealed tube and remove the Tenax cartridge.

Connect the valve on the Tedlar bag to the sorbent tube adapter. Connect the sorbent tube to the sorbent tube adapter with the Tenax (white granular) side of the tube facing the Tedlar bag. Connect the sampling syringe assembly to the CMS (black) side of the sorbent tube. Fittings on the adapters should be finer-tight. Open the valve on the Tedlar bag. Open the on/off valve of the sampling syringe. Depending on work plan stipulations, at least 10% of the soil gas samples analyzed by this GC method must be submitted for confirmational GC/MS analysis (according to modified methods TO-1 [Tenax absorbent] and TO-2 [Carbon Molecular Sieve (CMS) absorbent]). Each soil gas sample must be absorbed on replicate Tenax/CMS tubes. The volume absorbed on a Tenax/CMS tube is dependent on the total concentration of the compounds measured by the photovac/GC or other applicable GC:

Total Concentration (ppm)	Sample Volume (mL)
>10	Use Serial Dilution
10	10 - 50
5	20-100
1	100-250

After sampling, remove the tube from the sampling train with gloves or a clean cloth. DO NOT LABEL OR WRITE ON THE TENAX/CMS TUBE.

Place the sorbent tube in a conditioned stainless steel tube holder or culture tube. Culture tube caps should be sealed with Teflon tape.

7.4.3 Sample Labeling

Each sample tube container (not tube) must be labeled with the site name, sample station number, date sampled, and volume sampled.

Chain of custody sheets must accompany all samples to the laboratory.

7.4.4 Quality Assurance (QA)

Before field use, a QA check should be performed on each batch of sorbent tubes by analyzing a tube by thermal desorption/cryogenic trapping GC/MS.

At least one blank sample must be submitted with each set of samples collected at a site. This trip blank must be treated the same as the sample tubes except no sample will be drawn through the tube.

Sample tubes should be stored out of UV light (i.e., sunlight) and kept on ice until analysis. Samples should be taken in duplicate, when possible.

7.5 Summa Canister Sampling

1. Follow step 7.2.1 to evacuate well volume. If PID/FID readings were taken prior to taking a sample, evacuation is not necessary.

2. Attach a certified clean, evacuated 6-liter Summa canister via the 1/4" Teflon tubing.

3. Open valve on Summa canister. The soil gas sample is drawn into the canister by pressure equilibration. The approximate sampling time for a 6 liter canister is 20 minutes.

4. Site name, sample location, number, and date must be recorded on a chain of custody form and on a blank tag attached to the canister.

8.0 CALCULATIONS

8.1 Field Screening Instruments

Instrument readings are usually read directly from the meter. In some cases, the background level at the soil gas station may be subtracted:

Final Reading = Sample Reading - Background

8.2 Photovac GC Analysis

Calculations used to determine concentrations of individual components by Photovac GC analysis are beyond the scope of this SOP and are covered in ERT SOP #2109, *Photovac GC Analysis for Soil Water and Air/Soil Gas*.

9.0 CALIBRATION

9.1 Field Instruments

It is recommended that the manufacturers' manuals be consulted for correct use and calibration of all instrumentation.

9.2 Gilian Model HFS113A Air Sampling Pumps

Flow should be set at approximately 3.0 L/min; accurate flow adjustment is not necessary. Pumps should be calibrated prior to bringing into the field.

10.0 QUALITY ASSURANCE/ QUALITY CONTROL

10.1 Sample Probe Contamination

Sample probe contamination is checked between each sample by drawing ambient air through the probe via a Gilian pump and checking the response of the FID/PID. If readings are higher than background, replacement or decontamination is necessary.

Sample probes may be decontaminated simply by drawing ambient air through the probe until the HNu reading is at background. More persistent contamination can be washed out using methanol and water, then air drying. For persistent volatile contamination, use of a portable propane torch may be needed. Using a pair of pliers to hold the probe, run the torch up and down the length of the sample probe for approximately 1-2 minutes. Let the probe cool before handling. When using this method, make sure to wear gloves to prevent burns. Having more than one probe per sample team will reduce lag times between sample stations while probes are decontaminated.

10.2 Sample Train Contamination

The Teflon line forming the sample train from the probe to the Tedlar bag should be changed on a daily basis. If visible contamination (soil or water) is drawn into the sampling train, it should be changed immediately. When sampling in highly contaminated areas, the sampling train should be purged with ambient air, via a Gilian pump, for approximately 30 seconds between each sample. After purging, the sampling train can be checked using an FID or PID, or other field monitoring device, to establish the cleanliness of the Teflon line.

10.3 FID/PID Calibration

The FID and PIDs should be calibrated at least once a day using the appropriate calibration gases.

10.4 Field Blanks

Each cooler containing samples should also contain one Tedlar bag of ultra-zero grade air, acting as a field blank. The field blank should accompany the samples in the field (while being collected) and when they are delivered for analysis. A fresh blank must be provided to be placed in the empty cooler pending additional sample collection. One new field blank per cooler of samples is required. A chain of custody sheet must accompany each cooler of samples and should include the blank that is dedicated to that group of samples.

10.5 Trip Standards

Each cooler containing samples should contain a Tedlar bag of standard gas to calibrate the analytical instruments (Photovac GC, etc.). This trip standard will be used to determine any changes in concentrations of the target compounds during the course of the sampling day (e.g., migration through the sample bag, degradation, or adsorption). A fresh trip standard must be provided and placed in each cooler pending additional sample collection. A chain of custody sheet should accompany each cooler of samples and should include the trip standard that is dedicated to that group of samples.

10.6 Tedlar Bag Check

Prior to use, one bag should be removed from each lot (case of 100) of Tedlar bags to be used for sampling and checked for possible contamination as follows: the test bag should be filled with ultra-zero grade air; a sample should be drawn from the bag and analyzed via Photovac GC or whatever method is to be used for sample analysis. This procedure will ensure sample container cleanliness prior to the start of the sampling effort.

10.7 Summa Canister Check

From each lot of four cleaned Summa canisters, one is to be removed for a GC/MS certification check. If the canister passes certification, then it is re-evacuated and all four canisters from that lot are available for sampling.

If the chosen canister is contaminated, then the entire lot of four Summas must be recleaned, and a single canister is re-analyzed by GC/MS for certification.

10.8 Options

10.8.1 Duplicate Samples

A minimum of 5% of all samples should be collected in duplicate (i.e., if a total of 100 samples are to be collected, five samples should be duplicated.) In choosing which samples to duplicate, the following criteria applies: if, after filling the first Tedlar bag, and, evacuating the well for 15 seconds, the second HN (or other field monitoring device being used) reading matches or is close to (within 50%) the first reading, a duplicate sample may be taken.

10.8.2 Spikes

A Tedlar bag spike and Tenax tube spike may be desirable in situations where high concentrations of contaminants other than the target compounds are found to exist (landfills, etc.). The additional level of QA/QC attained by this practice can be useful in determining the effects of interferences caused by these non-target compounds. Summa canisters containing samples are not spiked.

11.0 DATA VALIDATION

11.1 Blanks (Field and Tedlar Bag Check)

For each target compound, the level of concentration found in the sample must be greater than three times the level (for that compound) found in the field blank which accompanied that sample to be considered valid. The same criteria apply to target compounds detected in the Tedlar bag pre-sampling contamination check.

12.0 HEALTH AND SAFETY CONSIDERATIONS

Due to the remote nature of sampling soil gas, special considerations can be taken with regard to health and safety. Because the sample is being drawn from underground, and no contamination is introduced into the breathing zone, soil gas sampling usually occurs in Level D. Ambient air is constantly monitored using the HNu PI101 to obtain background readings during the sampling procedure. As long as the levels in ambient air do not rise above background, no upgrade of the level of protection is needed.

When conducting soil gas sampling, leather gloves should be worn, and proper slam bar techniques should be implemented (bend knees). Also, an underground utility search should be performed prior to sampling. (See Section 4.5).

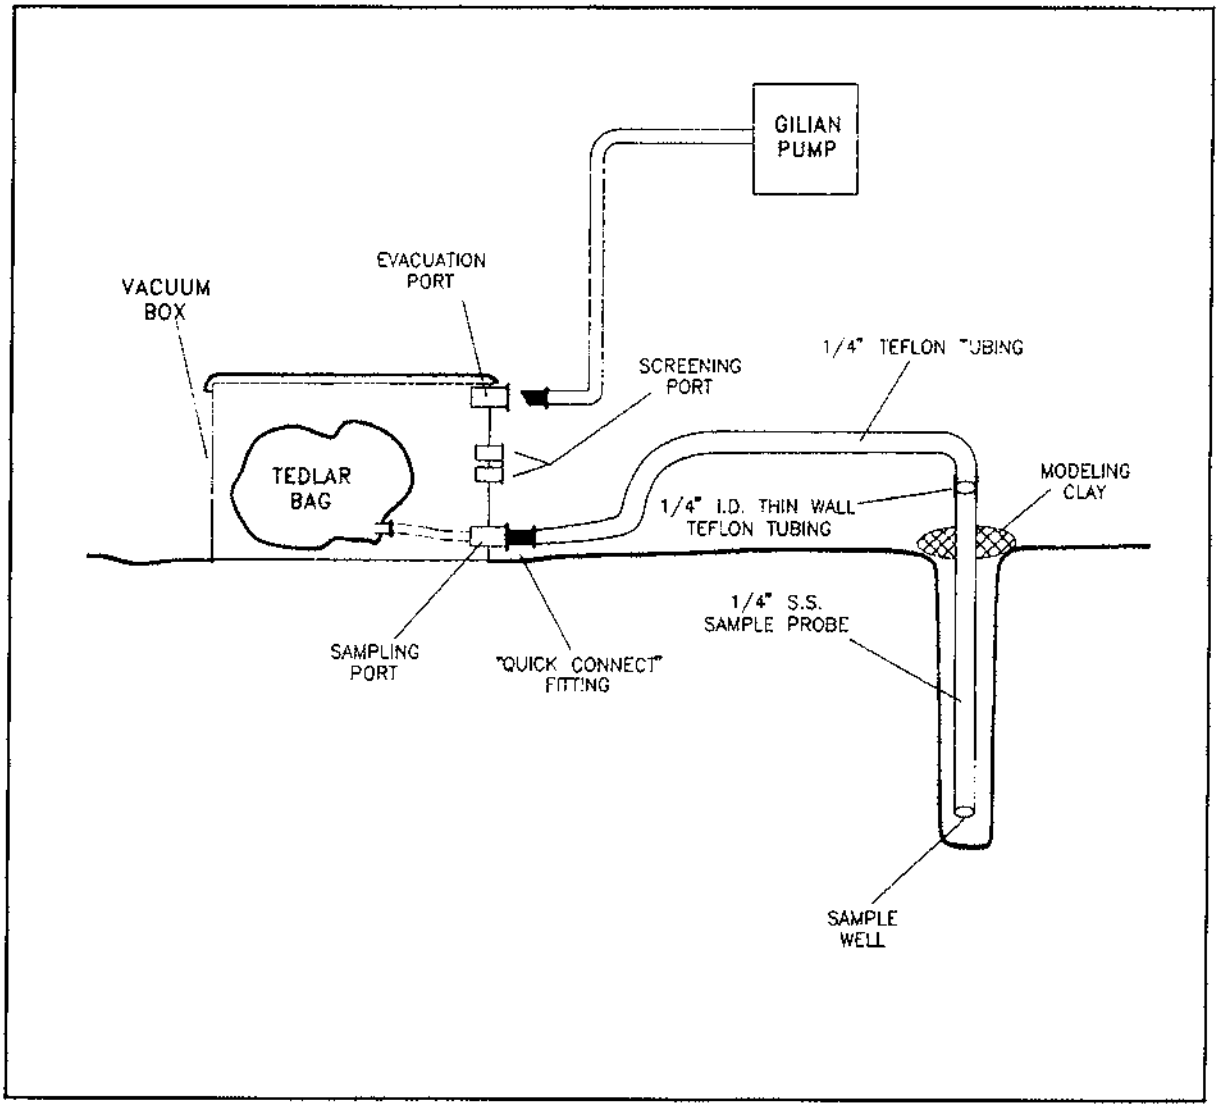
FIGURE 1. Sampling Train Schematic



APPENDIX B

HNu Field Protocol

Field Procedure

The following sections detail the procedures that are to be followed when using the HNu in the field.

Startup Procedure

a. Before attaching the probe, check the function switch on the control panel to ensure that it is in the off position. Attach the probe by plugging it into the interface on the top of the readout module. Use care in aligning the prongs in the probe cord with the plug in; don't force.

b. Turn the function switch to the battery check position. The needle on the meter should read within or above the green battery arc on the scale. If not, recharge the battery. If the red indicator light comes on, the battery needs recharging.

c. Turn the function switch to any range setting. Look into the end of the probe for no more than two to three seconds to see if the lamp is on. If it is on, it will give a purple glow. Do not stare into the probe any longer than three seconds. Long term exposure to UV light can damage eyes. Also, listen for the hum of the fan motor.

d. To ZERO the instrument, turn the function switch to the standby position and rotate the zero adjustment until the meter reads zero. A calibration gas is not needed since this is an electronic zero adjustment. If the span adjustment setting is changed after the zero is set, the zero should be rechecked and adjusted, if necessary. Wait 15 to 20 seconds to ensure that the zero reading is stable. If necessary, readjust the zero.

Operational Check

a. Follow the startup procedure.

b. With the instrument set on the 0-20 range, hold a solvent-based major market near the probe tip. If the meter deflects upscale, the instrument is working.

Field Calibration Procedure

a. Follow the startup procedure and the operational check.

b. Set the function switch to the range setting for the concentration of the calibration gas.

c. Attach a regulator (HNu 101-351) to a disposable cylinder of isobutylene gas (HNu 101-351). Connect the regulator to the probe of the HNu with a piece of clean Tygon tubing. Turn on the value on the regulator.

d. After fifteen seconds, adjust the span dial until the meter reading equals the concentration of the calibration gas used. Be careful to unlock the span dial before adjusting it. If the span has to be set below 3.0, calibration internally or return to equipment maintenance for repair.

e. Record in the field logbook: the instrument ID no. (EPA decal or serial number if the instrument is a rental); the initial and final span settings; the date and time; concentration and type of calibration has used; and the name of the person who calibrated the instrument.

Operation

a. Follow the startup procedure, operational check, and calibration check.

b. Set the function switch to the appropriate range. If the concentration of gases or vapors is unknown, set the function switch to the 0-20 ppm range. Adjust it if necessary.

c. While taking care not to permit the HNu to be exposed to excessive moisture, dirt, or contamination, monitor the work activity as specified in the Site Health and Safety Plan.

d. When the activity is completed or at the end of the day, carefully clean the outside of the HNu with a damp disposable towel to remove any visible dirt. Return the HNu to a secure area and place on charge.

e. With the exception of the probe's inlet and exhaust, the HNu can be wrapped in clear plastic to prevent it form becoming contaminated and to prevent water from getting inside in the event of precipitation.

A. Chain of custody form X

B. *Field data card and sample tag* X

1.0 Scope & Application:

1.1 This Standard Operating Procedure is applicable to the sample control procedures used for chain of custody of representative samples collected from various locations. It includes samples collected from both ambient and source locations.

1.2 A sample is physical evidence collected from a facility or from the environment. An essential part of all enforcement investigations is that evidence gathered be controlled. To accomplish this, the following sample identification and chain of custody procedures are established.

2.0 Summary of Method:

2.1 The method of sample identification depends on the type of measurement or analyses performed. When in-situ measurements are made, the data are recorded directly in logbooks or Field Data Cards with identifying information, field observations, and remarks. Examples of in-situ measurements are pH, temperature, D.O., conductivity, and flow measurement. Samples other than in-situ measurements, are identified by a sample tag or label. These samples are removed from the sample location and transported to a laboratory for analyses. Before removal, however, a sample is often separated into portions depending upon the analyses to be performed. Each portion is preserved in accordance with applicable procedures and each sample container is identified by a sample tag / label.

2.2 Sample tags / labels shall be completed for each sample, using waterproof ink, unless prohibited by weather conditions. For example, a logbook notation would explain that a pencil was used to fill out the sample tag because a ball point pen would not function in freezing weather. The information recorded on the sample tag/label includes:

Station Number - a number assigned by the project coordinator
Date - a six digit number indicating the year, month, day of collection
Time - a four digit number indicating military time of collection. e.g. 0954
Station Location - sampling station description
Samplers - each sampler is identified
Sample Number - a unique sample # established from the Field Data Card for each set of samples collected at one time and place
Parameter/pres. - the analysis to be conducted for the sample /sample preservation
Remarks - the samplers record pertinent observations affecting analyses, if any

2.3 A Field Data Card which assigns a unique number to each set of samples, must be completed for each sampling event. The field data card used for samples contains an appropriate place for designating the sample as a grab or a composite, and identifying the type of sample collected for analyses.

2.4 Due to the evidentiary nature of samples collected during enforcement investigations, possession must be traceable from the time the samples are collected until they are introduced as evidence inn legal proceedings. To maintain and document sample possession, chain of custody procedures are followed. A sample is under custody if:
- It is in your possession, or
- It is in your view, after being in your possession, or
- It was in your possession and then you then locked it up to prevent tampering, or
- It is in a designated secure area.

2.5 In collecting samples for evidence, collect only that number which provides a good representation of the media being sampled. To the extent possible, the quantity and types of samples and sample locations are determined prior to actual field work. As few people as possible should handle samples. The field sampler is personally responsible for the care and custody of the samples collected until they are transferred or dispatched properly.

2.6 Samples are accompanied by a chain of custody record. When transferring the possession of samples, the individuals relinquishing and receiving will sign, date, and note the time on the record. This record documents sample custody transfer from the sampler, often through another person, to the analyst at the laboratory. The samples are typically transferred to the sample receiving custodian at the laboratory.

3.0 Definitions:

3.1 **Bottle Blank: Analyte-free water is collected into a sample container, of the same lot as the containers used for the environmental samples. This evaluates contamination introduced from the sample container(s) from a common lot.**

3.2 Equipment/Rinse/Rinsate Blanks: A sample that is collected by pouring over or running analyte-free water through the sample collection equipment after decontamination and before sample collection. The sample is collected in the appropriate sample container with the proper preservative, identical to the samples. This represents background contamination resulting from the field equipment, sampling procedure, sample container, preservative, and shipment.

3.3 Field Blank: In the field, analyte-free water is collected into a sample container with preservatives. The sample containers are the same lot used for the environmental samples. This evaluates contamination introduced from the sample container(s) with applicable preservatives. Field blanks are not used for volatile samples.

3.4 Field Replicates Duplicates: Two or more samples collected at the same sampling

location. Field replicates should be samples collected side by side or by collecting one sample and immediately collecting the second sample. Field replicates represent the precision of the whole method, site heterogeneity, field sampling and the laboratory analysis.

3.5 Field Split Samples: Two or more representative subsamples taken from one environmental sample in the field. Prior to splitting, the environmental sample is homogenized to correct for sample heterogeneity that would adversely impact data comparability. Field split samples are usually analyzed by different laboratories (interlaboratory comparison) or by the same laboratory (intralaboratory comparison). Field splits are used to assess sample handling procedures from field to laboratory and laboratory's comparability.

3.6 Filter Blank: In the field, analyze-free water is passed through a filter and collected into in the appropriate sample container. The filter blank is then preserved. This procedure is identical to the sample collection.

3.7 Laboratory Quality Samples: Additional samples will be collected for the laboratory's quality control: matrix spike, matrix spike duplicate, laboratory duplicates, etc.

3.8 **Proficiency Testing (PT)/Performance Evaluation Sample (PES): A sample, the composition of which is unknown to the laboratory or analyst, provided to the analyst or laboratory to assess the capability to produce results within acceptable criteria.** This is optional depending on the data quality objectives.

3.9 Shipping Container Temperature Blank: A water sample that is transported to the laboratory to measure the temperature of the samples in the cooler.

4.0 Trip Blanks: A sample collected at the laboratory using analyte free water in the appropriate sample container with the proper preservative, taken out to the field, and returned to the laboratory for analysis without being opened. Trip blanks are generally for volatile organic compounds, low level metals, and gasoline range hydrocarbon samples. Used to assess contamination introduced during sample transport.

4.0 Health and Safety Warnings:

4.1 When working with potentially hazardous materials or situations, follow EPA, OSHA, and specific health or safety procedures.

4.2 All proper personal protection clothing and equipment is to be worn.

4.3 When sampling lagoons or surface impoundments containing known or suspected

hazardous substances, take adequate precautions. The sampling team member collecting the sample should not get too close of the edge of the impoundment, where bank failure may cause them to lose their balance.

4.4 Follow the Boat Safety SOP when conducting sampling from a boat.

4.5 Some samples may contain biological and chemical hazards. These samples should be handled with suitable protection to skin, eyes, etc.

5.0 Interferences:

5.1 Interference may result from using contaminated equipment, **solvents, reagents, sample container**, or sampling in a disturbed area.

5.2 Cross contamination problems can be eliminated or minimized through the use of dedicated sampling equipment. If this is not possible or practical, then decontamination of the sampling equipment is necessary.

5.3 All sampling equipment must be routinely demonstrated to be free from contaminants under the conditions of the analysis by running equipment blanks.

6.0 Personnel Qualifications:

6.1 All field samplers working at Superfund sites are required to take a 40 hour health and safety training course and a refresher course prior to engaging in any field activities.

6.2 The field sampler should be trained by an experienced sampler before initiating the procedure.

6.3 All personnel shall be responsible for complying with all quality assurance/quality control requirements that pertain to their organizational/technical function.

7.0 Equipment and Supplies:

7.1 log book, field data cards, custody seals, and chain of custody form

7.2 Zip lock plastic bags, large plastic bags, tape

7.3 Cooler(s) or other container(s) for securing samples

7.4 Padlock(s) (optional)

8.0 Sample Collection:

8.1 Sample control procedures, chain of custody procedures, are used in the collection of any type of samples. The level of control is strict for enforcement (evidence) samples and may be less for screening samples or water quality type samples.

8.2 The above (section 2.1 to 2.6) section address chain of custody procedures for enforcement type samples. Enforcement samples will also have custody seals placed on each individual sample container. Any automatic composite sampler will be secured with custody seals or padlocks to control access to the sample during collection.

8.3 All samples must have a unique field sample number that will identify it with a specific collection location/date/time and cannot be reused for the project. The field sample numbers may be generated during planning/preparation for the sampling or during sampling and can consist of up to 12 characters.

8.4 The sample containers may be pre-labeled (sample tagged) before sample collection or labeled (sample tagged) immediately after collection. The sample identification can consist of sample tags, labels, or indelible writing directly on the sample container. The required identifying sample information for any sample are:
-unique field sample number
-parameter(s) to be analyzed and sample preservation
-date & time of sample collection
-station number / location
-samplers

8.5 A chain of custody form will be used to transfer custody of samples to the laboratory. The form used may be as identified in the attachment or other chain of custody forms provided the same in formation is provided. Any alternative form used must at a minimum have a unique field sample number identifying each sample to be analyzed, parameter for analyses, sample collection date & time, sampler, custody transfer signature area.

9.0 Sample Handling, Preservation, and Storage:

9.1 Transfer the sample or collect directly a suitable labeled sample container.

9.2 Preserve the sample or use pre-preserved sample bottles, when appropriate.

9.3 Cap the container, use a custody seal if the sample is for enforcement and then place the container in a zip-lock plastic bag.

9.4 Place sample containers into cooler(s) ensuring that the bottles are in the ice but not totally immersed in water. Samples not requiring refrigeration do not need to be placed on ice.

9.5 Record all pertinent data in the logbook and on the field data card or sheet.

9.6 Complete the chain of custody form.

9.7 Samples may require short term storage in field locations prior to delivery to the laboratory for analyses. The storage may be in vehicles or lodging locations. The samples must be secured to limit access to them. A locked vehicle is considered controlled access. However, simply a locked lodging room is not secure due to potential custodial access. If an unattended lodging room is used for sample storage, the samples must be further secured. This may entail a padlock on the ice chest, samples in an ice chest secured in an inner bag with a custody seal on it, Ice chest taped shut with custody seal on the outside of it.

9.7 Attach the custody seals to the cooler prior to shipment if for investigation or shipment to another laboratory. If the samples are shipped, put the chain of custody form in a Zip-lock bag and tape to the inside cover of the cooler. Samples must be packaged to prevent breakage and leakage of any melted ice from the shipping container. The chain of custody form should have the courier name listed as receiving the samples for transport, however there will be no signature from the courier.

9.8 A list for the laboratory's containers and preservatives for the various analytes is located on the EPA Region 1 homepage under OEME.

9.10 Whenever samples are split with a source or other government agency, a separate chain of custody form should be completed for the samples and the relinquisher (sampler) and recipient should sign. If a representative is unavailable or refuses to sign for the samples, this can be noted in the "remarks" area of the form . When appropriate, as in the case where the representative is unavailable, the custody record should contain a statement that the samples were delivered to the designated location at the designated time. A copy of the chain of custody form for split samples must be kept with the project file.

10.0 Data and Records Management:

10.1 All data and information is to follow the Field Data Management SOP.

10.2 The chain of custody form is signed over to the laboratory. A copy is kept with the

sampling records.

10.3 The sampling data is stored at US EPA - NE, 11 Technology Dr, North Chelmsford, MA for at least 3 years.

11.0 Quality Control and Quality Assurance:

11.1 Representative samples are required. The sampler will evaluate the site specific conditions to assure the sample will be representative.

11.2 All sampling equipment must be decontaminated prior to use and after each discrete sample following the General Field Equipment - Cleaning, Preparation, and Decontamination SOP.

11.23 All field QC samples requirements in the SAP or QAPP must be followed. These may involve trip blanks, equipment blanks, field duplicates and the collection of extra samples for the laboratory's quality control.

12.0 Waste Management and Pollution Prevention:

12.1 During field sampling and analysis events there may be hazardous waste produced from the sample collection. The waste must be handled and disposed of in accordance with federal, state, and municipal regulations. Dispose of the hazardous waste produced at the site where the work was performed, if the operating site has proper disposal available. If there is no disposal that meets regulatory requirements, the waste must be transported back to EPA-NE and transferred to the hazardous waste manager for disposal. The sample volume should be minimized to reduce unnecessary waste.

12.2 This SOP for sample chain of custody will not generate any waste

Figures

SUPERCEDES: SOP #2012; Revision 0.0; 11.16.94; U.S. EPA Contract 68-C4-0022.

1.0 SCOPE AND APPLICATION

The purpose of this standard operating procedure (SOP) is to describe the procedures for the collection of representative soil samples. Sampling depths are assumed to be those that can be reached without the use of a drill rig, direct-push, or other mechanized equipment (except for a back-hoe). Analysis of soil samples may determine whether concentrations of specific pollutants exceed established action levels, or if the concentrations of pollutants present a risk to public health, welfare, or the environment.

These are standard (i.e., typically applicable) operating procedures which may be varied or changed as required, dependent upon site conditions, equipment limitations or limitations imposed by the procedure. In all instances, the actual procedures used should be documented and described in an appropriate site report.

Mention of trade names or commercial products does not constitute U.S. Environmental Protection Agency (EPA) endorsement or recommendation for use.

2.0 METHOD SUMMARY

Soil samples may be collected using a variety of methods and equipment depending on the depth of the desired sample, the type of sample required (disturbed vs. undisturbed), and the soil type. Near-surface soils may be easily sampled using a spade, trowel, and scoop. Sampling at greater depths may be performed using a hand auger, continuous flight auger, a trier, a split-spoon, or, if required, a backhoe.

3.0 SAMPLE PRESERVATION, CONTAINERS, HANDLING, AND STORAGE

Chemical preservation of solids is not generally recommended. Samples should, however, be cooled and protected from sunlight to minimize any potential reaction. The amount of sample to be collected and proper sample container type are discussed in ERT/REAC SOP #2003 Rev. 0.0 08/11/94, *Sample Storage, Preservation and Handling*.

4.0 INTERFERENCES AND POTENTIAL PROBLEMS

There are two primary potential problems associated with soil sampling - cross contamination of samples and improper sample collection. Cross contamination problems can be eliminated or minimized through the use of dedicated sampling equipment. If this is not possible or practical, then decontamination of sampling equipment is necessary. Improper sample collection can involve using contaminated equipment, disturbance of the matrix resulting in compaction of the sample, or inadequate homogenization of the samples where required, resulting in variable, non-representative results.

5.0 EQUIPMENT

Soil sampling equipment includes the following:

- Maps/plot plan
- Safety equipment, as specified in the site-specific Health and Safety Plan
- Survey equipment or global positioning system (GPS) to locate sampling points
- Tape measure
- Survey stakes or flags
- Camera and film
- Stainless steel, plastic, or other appropriate homogenization bucket, bowl or pan
- Appropriate size sample containers
- Ziplock plastic bags
- Logbook
- Labels
- Chain of Custody records and custody seals
- Field data sheets and sample labels
- Cooler(s)
- Ice
- Vermiculite
- Decontamination supplies/equipment
- Canvas or plastic sheet
- Spade or shovel
- Spatula
- Scoop
- Plastic or stainless steel spoons
- Trowel(s)
- Continuous flight (screw) auger
- Bucket auger
- Post hole auger
- Extension rods
- T-handle
- Sampling trier
- Thin wall tube sampler
- Split spoons
- Vehimeyer soil sampler outfit
  - Tubes
  - Points
  - Drive head
  - Drop hammer
  - Puller jack and grip
- Backhoe

6.0 REAGENTS

Reagents are not used for the preservation of soil samples. Decontamination solutions are specified in ERT/REAC SOP #2006 Rev. 0.0 08/11/94, *Sampling Equipment Decontamination*, and the site specific work plan.

7.0 PROCEDURES

7.1 Preparation

1. Determine the extent of the sampling effort, the sampling methods to be employed, and the types and amounts of equipment and supplies required.
2. Obtain necessary sampling and monitoring equipment.
3. Decontaminate or pre-clean equipment, and ensure that it is in working order.
4. Prepare schedules and coordinate with staff, client, and regulatory agencies, if appropriate.
5. Perform a general site survey prior to site entry in accordance with the site specific Health and Safety Plan.
6. Use stakes, flagging, or buoys to identify and mark all sampling locations. Specific site factors, including extent and nature of contaminant, should be considered when selecting sample location. If required, the proposed locations may be adjusted based on site access, property boundaries, and surface obstructions. All staked locations should be utility-cleared by the property owner or the On-Scene-Coordinator (OSC) prior to soil sampling; and utility clearance should always be confirmed before beginning work.

7.2 Sample Collection

7.2.1 Surface Soil Samples

Collection of samples from near-surface soil can be accomplished with tools such as spades, shovels, trowels, and scoops. Surface material is removed to the required depth and a stainless steel or plastic scoop is then used to collect the sample.

This method can be used in most soil types but is limited to sampling at or near the ground surface. Accurate, representative samples can be collected with this procedure depending on the care and precision demonstrated by the sample team member. A flat, pointed mason trowel to cut a block of the desired soil is helpful when undisturbed profiles are required. Tools plated with chrome or other materials should not be used. Plating is particularly common with garden implements such as potting trowels.

The following procedure is used to collect surface soil samples:

1. Carefully remove the top layer of soil or debris to the desired sample depth with a pre-cleaned spade.

2. Using a pre-cleaned, stainless steel scoop, plastic spoon, or trowel, remove and discard a thin layer of soil from the area which came in contact with the spade.

3. If volatile organic analysis is to be performed, transfer the sample directly into an appropriate, labeled sample container with a stainless steel lab spoon, or equivalent and secure the cap tightly. Place the remainder of the sample into a stainless steel, plastic, or other appropriate homogenization container, and mix thoroughly to obtain a homogenous sample representative of the entire sampling interval. Then, either place the sample into appropriate, labeled containers and secure the caps tightly; or, if composite samples are to be collected, place a sample from another sampling interval or location into the homogenization container and mix thoroughly. When compositing is complete, place the sample into appropriate, labeled containers and secure the caps tightly.

7.2.2 Sampling at Depth with Augers and Thin Wall Tube Samplers

This system consists of an auger, or a thin-wall tube sampler, a series of extensions, and a "T" handle (Figure 1, Appendix A). The auger is used to bore a hole to a desired sampling depth, and is then withdrawn. The sample may be collected directly from the auger. If a core sample is to be collected, the auger tip is then replaced with a thin wall tube sampler. The system is then lowered down the borehole, and driven into the soil to the completion depth. The system is withdrawn and the core is collected from the thin wall tube sampler.

Several types of augers are available; these include: bucket type, continuous flight (screw), and post-hole augers. Bucket type augers are better for direct sample recovery because they provide a large volume of sample in a short time. When continuous flight augers are used, the sample can be collected directly from the flights. The continuous flight augers are satisfactory when a composite of the complete soil column is desired. Post-hole augers have limited utility for sample collection as they are designed to cut through fibrous, rooted, swampy soil and cannot be used below a depth of approximately three feet.

The following procedure is used for collecting soil samples with the auger:

1. Attach the auger bit to a drill rod extension, and attach the "T" handle to the drill rod.

2. Clear the area to be sampled of any surface debris (e.g., twigs, rocks, litter). It may be advisable to remove the first three to six inches of surface soil for an area approximately six inches in radius around the drilling location.

3. Begin augering, periodically removing and depositing accumulated soils onto a plastic sheet spread near the hole. This prevents accidental brushing of loose material back down the borehole when removing the auger or adding drill rods. It also facilitates refilling the hole, and avoids possible contamination of the surrounding area.

4. After reaching the desired depth, slowly and carefully remove the auger from the hole. When sampling directly from the auger, collect the sample after the auger is removed from the hole and proceed to Step 10.

5. Remove auger tip from the extension rods and replace with a pre-cleaned thin wall tube sampler. Install the proper cutting tip.

6. Carefully lower the tube sampler down the borehole. Gradually force the tube sampler into the soil. Do not scrape the borehole sides. Avoid hammering the rods as the vibrations may cause the boring walls to collapse.

7. Remove the tube sampler, and unscrew the drill rods.

8. Remove the cutting tip and the core from the device.

9. Discard the top of the core (approximately 1 inch), as this possibly represents material collected before penetration of the layer of concern. Place the remaining core into the appropriate labeled sample container. Sample homogenization is not required.

10. If volatile organic analysis is to be performed, transfer the sample into an appropriate, labeled sample container with a stainless steel lab spoon, or equivalent and secure the cap tightly. Place the remainder of the sample into a stainless steel, plastic, or other appropriate homogenization container, and mix thoroughly to obtain a homogenous sample representative of the entire sampling interval. Then, either place the sample into appropriate, labeled containers and secure the caps tightly; or, if composite samples are to be collected, place a sample from another sampling interval into the homogenization container and mix thoroughly.

When compositing is complete, place the sample into appropriate, labeled containers and secure the caps tightly.

11. If another sample is to be collected in the same hole, but at a greater depth, reattach the auger bit to the drill and assembly, and follow steps 3 through 11, making sure to decontaminate the auger and tube sampler between samples.

12. Abandon the hole according to applicable state regulations. Generally, shallow holes can simply be backfilled with the removed soil material.

7.2.3 Sampling with a Trier

The system consists of a trier, and a "T" handle. The auger is driven into the soil to be sampled and used to extract a core sample from the appropriate depth.

The following procedure is used to collect soil samples with a sampling trier:

1. Insert the trier (Figure 2, Appendix A) into the material to be sampled at a 0° to 45° angle from horizontal. This orientation minimizes the spillage of sample.

2. Rotate the trier once or twice to cut a core of material.

3. Slowly withdraw the trier, making sure that the slot is facing upward.

4. If volatile organic analyses are required, transfer the sample into an appropriate, labeled sample container with a stainless steel lab spoon, or equivalent and secure the cap tightly. Place the remainder of the sample into a stainless steel, plastic, or other appropriate homogenization container, and mix thoroughly to obtain a homogenous sample representative of the entire sampling interval. Then, either place the sample into appropriate, labeled containers and secure the caps tightly; or, if composite samples are to be collected, place a sample from another sampling interval into the homogenization container and mix thoroughly. When compositing is complete, place the sample into appropriate, labeled containers and secure the caps tightly.

7.2.4 Sampling at Depth with a Split Spoon (Barrel) Sampler

Split spoon sampling is generally used to collect undisturbed soil cores of 18 or 24 inches in length. A series of consecutive cores may be extracted with a split spoon sampler to give a complete soil column profile, or an auger may be used to drill down to the desired depth for sampling. The split spoon is then driven to its sampling depth through the bottom of the augured hole and the core extracted.

When split spoon sampling is performed to gain geologic information, all work should

be performed in accordance with ASTM D1586-98, "Standard Test Method for Penetration Test and Split-Barrel Sampling of Soils".

The following procedures are used for collecting soil samples with a split spoon:

1. Assemble the sampler by aligning both sides of barrel and then screwing the drive shoe on the bottom and the head piece on top.

2. Place the sampler in a perpendicular position on the sample material.

3. Using a well ring, drive the tube. Do not drive past the bottom of the head piece or compression of the sample will result.

4. Record in the site logbook or on field data sheets the length of the tube used to penetrate the material being sampled, and the number of blows required to obtain this depth.

5. Withdraw the sampler, and open by unscrewing the bit and head and splitting the barrel. The amount of recovery and soil type should be recorded on the boring log. If a split sample is desired, a cleaned, stainless steel knife should be used to divide the tube contents in half, longitudinally. This sampler is typically available in 2 and 3 1/2 inch diameters. A larger barrel may be necessary to obtain the required sample volume.

6. Without disturbing the core, transfer it to appropriate labeled sample container(s) and seal tightly.

7.2.5 Test Pit/Trench Excavation

A backhoe can be used to remove sections of soil, when detailed examination of soil characteristics are required. This is probably the most expensive sampling method because of the relatively high cost of backhoe operation.

The following procedures are used for collecting soil samples from test pits or trenches:

1. Prior to any excavation with a backhoe, it is important to ensure that all sampling locations are clear of overhead and buried utilities.

2. Review the site specific Health & Safety plan and ensure that all safety precautions including appropriate monitoring equipment are installed as required.

3. Using the backhoe, excavate a trench approximately three feet wide and approximately one foot deep below the cleared sampling location. Place excavated soils on plastic sheets. Trenches greater than five feet deep must be sloped or protected by a shoring system, as required by OSHA regulations.

4. A shovel is used to remove a one to two inch layer of soil from the vertical face of the pit where sampling is to be done.

5. Samples are taken using a trowel, scoop, or coring device at the desired intervals. Be sure to scrape the vertical face at the point of sampling to remove any soil that may have fallen from above, and to expose fresh soil for sampling. In many instances, samples can be collected directly from the backhoe bucket.

6. If volatile organic analyses are required, transfer the sample into an appropriate, labeled sample container with a stainless steel lab spoon, or equivalent and secure the cap tightly. Place the remainder of the sample into a stainless steel, plastic, or other appropriate homogenization container, and mix thoroughly to obtain a homogenous sample representative of the entire sampling interval. Then, either place the sample into appropriate, labeled containers and secure the caps tightly; or, if composite samples are to be collected, place a sample from another sampling interval into the homogenization container and mix thoroughly. When compositing is complete, place the sample into appropriate, labeled containers and secure the caps tightly.

7. Abandon the pit or excavation according to applicable state regulations. Generally, shallow excavations can simply be backfilled with the removed soil material.

8.0 CALCULATIONS

This section is not applicable to this SOP.

9.0 QUALITY ASSURANCE/QUALITY CONTROL

There are no specific quality assurance (QA) activities which apply to the implementation of these procedures. However, the following QA procedures apply:

1. All data must be documented on field data sheets or within site logbooks.

2. All instrumentation must be operated in accordance with operating instructions as supplied by the manufacturer, unless otherwise specified in the work plan. Equipment checkout and calibration

activities must occur prior to sampling/operation, and they must be documented.

10.0 DATA VALIDATION

This section is not applicable to this SOP.

11.0 HEALTH AND SAFETY

When working with potentially hazardous materials, follow U.S. EPA, OHSA and corporate health and safety procedures, in addition to the procedures specified in the site specific Health & Safety Plan..

SITE ASSESSMENT PLAN

Introduction

The site assessment plan for the Allied Builders Supply Co. facility has been formulated to evaluate whether soil contamination is present in the vicinity of the UST to be decommissioned. The site assessment plan formulated will be followed for the sole tank excavation to be performed.

The site assessment plan will consist of the following two tasks:

Task I: Soil Screening/Field Testing
Task II: Soil Sampling and Analyses

Task I: Soil Screening/Field Testing

During tank removal activities, observations will be made of the soils removed at the top of the tank and around any fill pipes, as well as in the excavation walls and floor. Observations will consist of visually inspecting the soils, examining the soils for odors, staining, and free product and screening the soils with an Organic Vapor Analyzer (OVA).

The screening evaluation will be especially applied to the base of the tank excavation in an effort to locate any "hot spots" that may indicate that a discharge or discharges have occurred in the past. In the event that soil contamination is indicated, additional soils will be excavated and the OVA will be used to screen the soils and assure that all impacted soils have been removed.

F. Contractor personnel, using Level B (supplied air) protection will enter tank to conduct decontamination procedures.

G. Decontamination procedures will consist of scraping all residue from walls and floor of tank. Next a biodegradable degreaser will be applied and walls and floor squeegeed and pumped dry. The final step will be to wipe clean and dry the entire interior of tank using clean, dry rags.

H. All residue will be pumped into appropriate holding drums or portable tanker for manifesting and disposal to an approved facility.

4. TANK REMOVAL

A. After decontamination is completed, excavation will occur to remove the tank from the ground. The tank will be secured and examined for corrosion holes or signs of leakage. If any evidence of a discharge is found the NJDEPE Hotline will be called immediately.

B. If no evidence of discharge is present the tank will be prepared for disposal by labelling with appropriate data and removed to an acceptable facility.

5. SITE ASSESSMENT - POST EXCAVATION

Throughout the entire excavation, decommissioning and post excavation procedures, observations will be made for evidence of contamination . If any indication of a discharge is suspected the NJDEPE Hotline will be immediately notified.

A. During and after removal of tank, soil surrounding the tank will be examined, incuding soil around any fill lines and piping for evidence of contamination.

B. If evidence of contamination is discovered, the NJDEPE Hotline will be notified and field tests performed to determine how much additional soil must be excavated and stockpilled utilizing the guidelines and procedures outlined in the Management of Excavated Soils .

6. SOIL SAMPLING

Soil sampling will occur based on the requirements outlined in NJDEPE Division of Water Resources Technical Guidance Document and Field Sampling Prodecure Manual. Samples collected will be delivered to N.J. Certified Laboratory for analyses. The soil sampling tasks are discussed in the following Site Assessment Plan.

7. BACK FILL OF EXCAVATION

After testing is complete, the tank void will be back-filled with clean, inert backfill material to current grade. If determined on site to be necessary, the excavation will be lined with plastic liner to segregate clean fill in tank void from surrounding host soils for future remediation.

TANK DECOMMISSIONING PLAN

1. GENERAL SCOPE OF WORK

Allied Builders Supply Co. has contracted with JCB Environmental Contractors to decommission, via removal, (1) 1000- gallon UST which contains unleaded gasoline. Tri-State Environmental Consultants, Inc. (TEC) has been subcontracted to perform all Site Assessment services. This site is located at 101 West Elizabeth Avenue in Linden, NJ.

2. SITE PREPARATION

As a safety precaution all ignition sources will be removed from the excavation site. Safety and protective equipment will be staged on site. Utility lines will be marked out to prevent hitting them during excavation activities. Tank product level will be verified prior to UST decommissioning activities.

3. TANK CLEANING PROCEDURE

Following API 1604 recommended practice for "Removal and Disposal of Used Underground Petroleum Storage Tanks":

A. Excavation of soil on top of tank exposing upper section of U.S.T.

B. Drain all piping back to tank and disconnect.

C. Render tank vapor free.

D. Plug all openings except vent.

E. Contractor will, if necessary, cut access hole in tank to allow entry for cleaning.

Following the removal of the tank from the excavation and completion of the soil screening operations, field tests will be performed to further evaluate if discharges have occurred. In the event that free product is present when the tank is removed, field testing will be implemented to ascertain the extent of contaminated soils.

Field testing will consist of the soil/water agitation method to determine if dissolved product is present within the soils. In addition, the field sorption test will be utilized to determine if free product is present within the soils.

Task 2: Soil Sampling and Analyses

Soil sampling and analyses will be performed whether or not evidence of a discharge from the tank is present. In the event that a discharge did occur soil sampling and analyses will be performed following the removal of impacted soils to confirm that all contaminated soils have been successfully removed from the tank area.

Soil sampling and analyses will be performed on soil samples collected at 5-foot intervals from the tank bed. It is anticipated that up to three soil samples will be collected and tested for PP VO+10. In the event that any of the soil samples collected from the gasoline UST beds indicate any contamiansts above NJDEPE standards, additional soil "hotspots" will be re-excavated and samples for PP VO+10.

All soil samples will be collected with stainless steel trowels. Prior to sampling and between sampling episodes the trowels will be decontaminated in the following manner:

- washed in a liquinox and water solution
- tap water rinse
- distilled water rinse
-10% nitric acid rinse
-distilled water rinse
- acetone rinse
- air dry
- distilled water rinse

Collected soil samples will be placed into laboratory supplied glassware and then placed in a cooler on ice. Following their collection the soil samples will be immediately transported to the laboratory for analysis.

All analyses will be conducted by a NJDEPE-certified laboratory.

Figure 1 illustrates the proposed soil sampling locations. In the event that any discharges are noted during any part of the Site Assessment activities the NJDEPE Hotline will be immediately notified.

TRI-STATE ENVIRONMENTAL CONSULTANTS

IMPLEMENTATION SCHEDULE

Tank removal activities will commence within two weeks following approval from the NJDEPE. The local fire inspector will be notified 1 week prior to UST removal. A permit will be obtained from the local building department immediately following approval from the NJDEPE. Site assessment activities including soil sampling will commence throughout the UST decommissioning process. Soil samples will be delivered to the laboratory immediately following their collection. It is anticipated that the soil sampling data will be generated in 1-2 weeks follwing receipt by the laboratory. The Closure Plan Implementation Summary Report will be produced one week following receipt of the laboratory data analyses.

RE: Confirmation Report
101 West Elizabeth Avenue
Linden, Union County, New Jersey
Block 254, Lot 10
Case No. 93-6-24-1425-2

Gentlemen:

This firm represents 101 West Elizabeth Avenue Corporation, the owner of the above-referenced property, in connection with environmental matters. On Thursday, June 24, 1993, a 2,000 gallon gasoline underground storage tank ("UST") was removed by JCB Environmental Contractors, Greenbrook, New Jersey, pursuant to an NJDEPE approved Closure Plan. At the same time, a 500 gallon #2 fuel oil UST was closed in place. The property was formerly used as a lumber yard.

During excavation activities, a few small holes were observed on the side of the 2,000 gallon gasoline UST and small streaks of contamination were observed in the surrounding soil. On this basis, the NJDEPE non-emergency hotline was notified of the condition. Pursuant to N.J.A.C. 7:1E-5.8, kindly accept this

BRESSLER, AMERY & ROSS

letter as 101 West Elizabeth Avenue Corporation's Confirmation Report.

1. The condition was reported by the subsurface evaluator, Mr. Steven Hambos of Tri-State Environmental Consultants, 389 Mayer Court, Ridgefield, New Jersey.

2. The owner or operator of the property at the time the condition occurred was 101 West Elizabeth Avenue Corporation.

3. The source of the condition is the 2,000 gallon gasoline UST. 101 West Elizabeth Avenue Corporation intends to take soil samples to confirm that the 500 gallon #2 fuel oil UST is not a source.

4. The chemical abstract service number for gasoline is 8006-61-9.

5. The quantity of the hazardous substance involved is unknown. Approximately 70 tons of soil have been stockpiled on-site. 101 West Elizabeth Avenue Corporation is in the process of arranging for the proper disposal of this soil.

6. The date on which the condition began is unknown. However, the condition was discovered on Thursday, June 24, 1993 and reported to the NJDEPE's non-emergency hotline.

7. In order to evaluate these issues, 101 West Elizabeth Avenue Corporation has retained Edward N. Sailer of Sailer Environmental, Inc., 724 Boston Post Road, Madison, Connecticut 06443, telephone number (203) 245-7744.

If you have any questions concerning this matter or require additional information, please do not hesitate to contact me.

Very truly yours,

BRESSLER, AMERY & ROSS

Re: Allied Building Supply Co.
101 West Elizabeth Avenue
Linden, Union County, New Jersey
SEI Project No. 105-01

Dear Ms. Connors:

On July 26, 1993, Sailer Environmental, Inc. (SEI) inspected two underground tank excavations at the above referenced property, and collected soil samples from the former location of a 2,000 gallon underground storage tank. This letter report sets forth SEI's observations on that date, the sampling procedures that were employed, and a discussion of the sampling results.

BACKGROUND

Two underground storage tanks (USTs) were previously closed by JCB Environmental Contractors (JCB). These tanks were a 2,000 gallon UST that contained gasoline, and a 500 gallon #2 fuel oil tank. We understand that the 2,000 gallon UST was closed by removal in accordance with an Underground Storage Tank Closure Plan dated May 1993, prepared by Tri-State Environmental Consultants, Inc. (Tri-State). A copy of the Tri-State Closure Plan is provided as Attachment 1. The 500 gallon UST was closed by in place abandonment, because it is located beneath the office building on site.

At the time that the tanks were closed, JCB and/or Tri-State determined that both tanks were leaking, and reported the leaks to the NJDEPE Hotline. This verbal notification was subsequently confirmed in a July 22, 1993 letter to the NJDEPE from environmental counsel for Allied Building Supply Co. A copy of that letter is provided in Attachment 2.

SEI was contracted to collect soil samples from the open tank graves to determine the level of contamination, if any, that remained in the soils.

724 Boston Post Road • P.O. Box 21 • Madison, CT 06443
(203) 245-7744 • FAX (203) 245-2422

SOIL SAMPLING

On July 26, 1993, SEI inspected the two tank graves in preparation for soil sampling. It was determined that soil samples could not be obtained from the 500 gallon UST that had been abandoned in place because the excavation had collapsed, and access to the open end of the tank could not be gained. The 2,000 gallon UST grave, located immediately north of the warehouse, was found to be in stable condition and was sampled.

The 2,000 UST grave was approximately 23' by 10' in area, and was approximately 11.75' in depth at the center. Depth to standing water in the excavation was measured at 11.25', and is believed to represent the water table. A sketch of the tank grave is provided in Attachment 3.

Seven soil samples, including one duplicate sample were collected from the tank grave in accordance with the sampling procedures set forth in the New Jersey Department of Environmental Protection and Energy (NJDEPE) Technical Requirements for Site Remediation (NJAC 7:26E-1 et seq.). All samples were screened with an HNu model HW-101 photoionization detector equipped with a 10.2 ev probe. The results of the screening are provided in Attachment 3.

Four side wall samples were collected at approximately 0.5' above the water table elevation. These samples were numbered 105-T1-01, 105-T1-02, 105-T1-03, and 105-T1-04, and their locations are shown on Attachment 3. These samples were collected from a 0.5' -1.0' increment through the side wall. Two samples (105-T1-05 and 105-T1-06) were collected from the excavation floor at the 0 - 0.5' interval above the water table. A duplicate sample 105-T1-D was taken of sample 105-T1-01. A Trip Blank (105-T1-TB1) was provided for Q uality Control/Quality Assurance (QA/QC) for the VOA+10 samples. A Field Blank was not provided by the laboratory. The decision was made to proceed without this blank.

The samples were submitted to International Hydronics Corporation, and analyzed for volatile organic compounds calibrated for xylene with a library search (VOA +10), and lead in accordance with the requirements set forth at Table 2-3 (25 NJR 2447).

SAMPLE RESULTS

International Hydronics Corporation's analytical report for these samples is provided in Attachment 4. A summary of the VOA sample results is provided below.

TABLE 1-1
SUMMARY OF VOA SAMPLE RESULTS[1] (mg/kg)

SAMPLE NUMBER	TOLUENE	ETHYLBENZENE	XYLENE (Total)
105-T1-01	0.33	ND	47
105-TI-02	ND	ND	ND
105-T1-03	ND	ND	ND
105-T1-04	ND	ND	ND
105-T1-05	32	4.7	48
105-T1-D	6.2	7.5	194
105-T1-TB1	ND	ND	ND

The sample results indicate that the soils in the 2,000 gallon UST grave meet the current NJDEPE Soil Cleanup Criteria[2], including the Impact to Groundwater Soil Cleanup Criteria, for all parameters except total xylene. The total xylene results for three of the samples meet the Residential Direct Contact, and Non Residential Direct Soil Cleanup Criteria, but exceed the Impact to Groundwater Soil Cleanup Criteria of 10 mg/kg.

The sample results for total lead indicate that the lead levels in the soils are well below the current NJDEPE Soil Cleanup Criteria.

---

[1]Trichloroflouromethane and methylene chloride were also reported in these sample results at or near the Quantitation Limit. These compounds are common laboratory contaminants and are not reported in the table. Tentatively Identified Compounds (TICs) were also reported in some samples. See Attachment 4 for a listing of TICs reported.

[2]The "Soil Cleanup Criteria" used in this evaluation is the criteria attached to a January 20, 1993 Memorandum of Karl Delaney, Director of the Division of Responsible Party Site Remediation, to Site remediation Program Staff.

DISCUSSION

Based on the above sample results, the NJDEPE may require the installation of a groundwater monitoring well within the tank grave to determine impact to groundwater. Depending on the results of the groundwater sampling, NJDEPE could require a full Remedial Investigation. However, because this site is proposed to be used as a parking area, and because there is a reasonable probability that off-site potable wells are not, and will not be impacted, we recommend that this matter be assigned to an NJDEPE BUST Case Manager for review before proceeding at risk. We also recommend that the 500 gallon UST access be re-excavated to allow sampling to assess the impact of that tank on the surrounding soils.

Should you have any questions or require any additional information, please call me.

Sincerely,

SAILER ENVIRONMENTAL, INC.

Edward N. Sailer
President

1.0 INTRODUCTION

This Remedial Investigation Addendum Report summarizes the following activities which have taken place at the Allied Building Supply Company site at 101 West Elizabeth Avenue, Linden, New Jersey:

- Gasoline UST removal in June 1993.
- Gasoline UST excavation site assessment conducted in July 1993.
- Soil boring investigation and installation of one monitoring well in August 1993.
- Installation of three additional monitoring wells for contaminant delineation, soil boring sample collection from former gasoline tank excavation, post excavation soil sampling from heating oil UST excavation, and collection of soil samples from the soil pile associated with the gasoline tank excavation, to evaluate soil quality for disposal or reuse options in November 1993.
- A well search for potable wells within a one-mile radius of the site.

The well search has been ordered but not yet received, and will be forwarded to the agency when it has been received. Due to extreme weather conditions and snow cover, the elevation of the well casings have not yet been surveyed; this activity should be completed the week of 2/18/94 and the Form Bs will be submitted under separate cover.

2.0 PREVIOUS INVESTIGATIONS

2.1 Tank Closure Activities

The gasoline tank was removed on June 24, 1993 in accordance with an approved closure plan submitted by **Tri-State Environmental Consultants, Inc.** in Fort Lee, New Jersey in May 1993. The tank was removed by **JCB Environmental Contractors** of Greenbrook, New Jersey. A few small holes were noted in one side of the tank and small streaks of visibly impacted soil were noted. The Environmental Hotline was called and a discharge reported (Case No. 93-06-24-1425-2).

Approximately 70 tons of soil was removed during the tank removal and stockpiled onsite. A confirmation report was sent by **Bressler, Amery & Ross**, attorneys for the owner.

2.2 Investigation of Tank Grave

On July 26, 1993 soil samples were collected from the tank grave by **Sailer Environmental Incorporated** of Madison, Connecticut. Four side wall samples, two floor samples, and one duplicate sample were collected from the tank grave. Sample results are presented in Table 1, and sample locations are shown on Figure 1.

Based upon the analytical results from the soil samples, only two samples exceeded soil cleanup criteria for only one parameter, total xylenes, by a marginal amount. The report recommended installation of a ground water monitoring well.

2.3 Soil Boring/Well Installation

Three soil borings and one monitoring well were installed at the site on August 30, 1993 under the direction of **American Resource Consultants** of Doylestown, PA. Soil samples were collected from each soil boring and analyzed for volatile organic compounds. Results are summarized in Table 2, and boring locations are shown on Figure 2. A ground water sample was collected from the well on September 3, 1993.

The only soil sample exceeding the NJDEPE proposed soil "impact to ground water" cleanup guidelines was at the water table in well MW-1, and only exceeded the cleanup criteria for xylene (10 mg/kg). No other sample in the vicinity of the tank reported any exceedences of cleanup criteria, and the report recommended no further action for soils. The ground water sample reported anomalous levels of gasoline constituents.

3.0 FIELD ACTIVITIES

Field activities for this investigation included the following tasks:

Task 1 - Installation of Ground Water Monitoring Wells

Task 2 - Collection of Soil Samples

Task 3 - Collection of Ground Water Samples

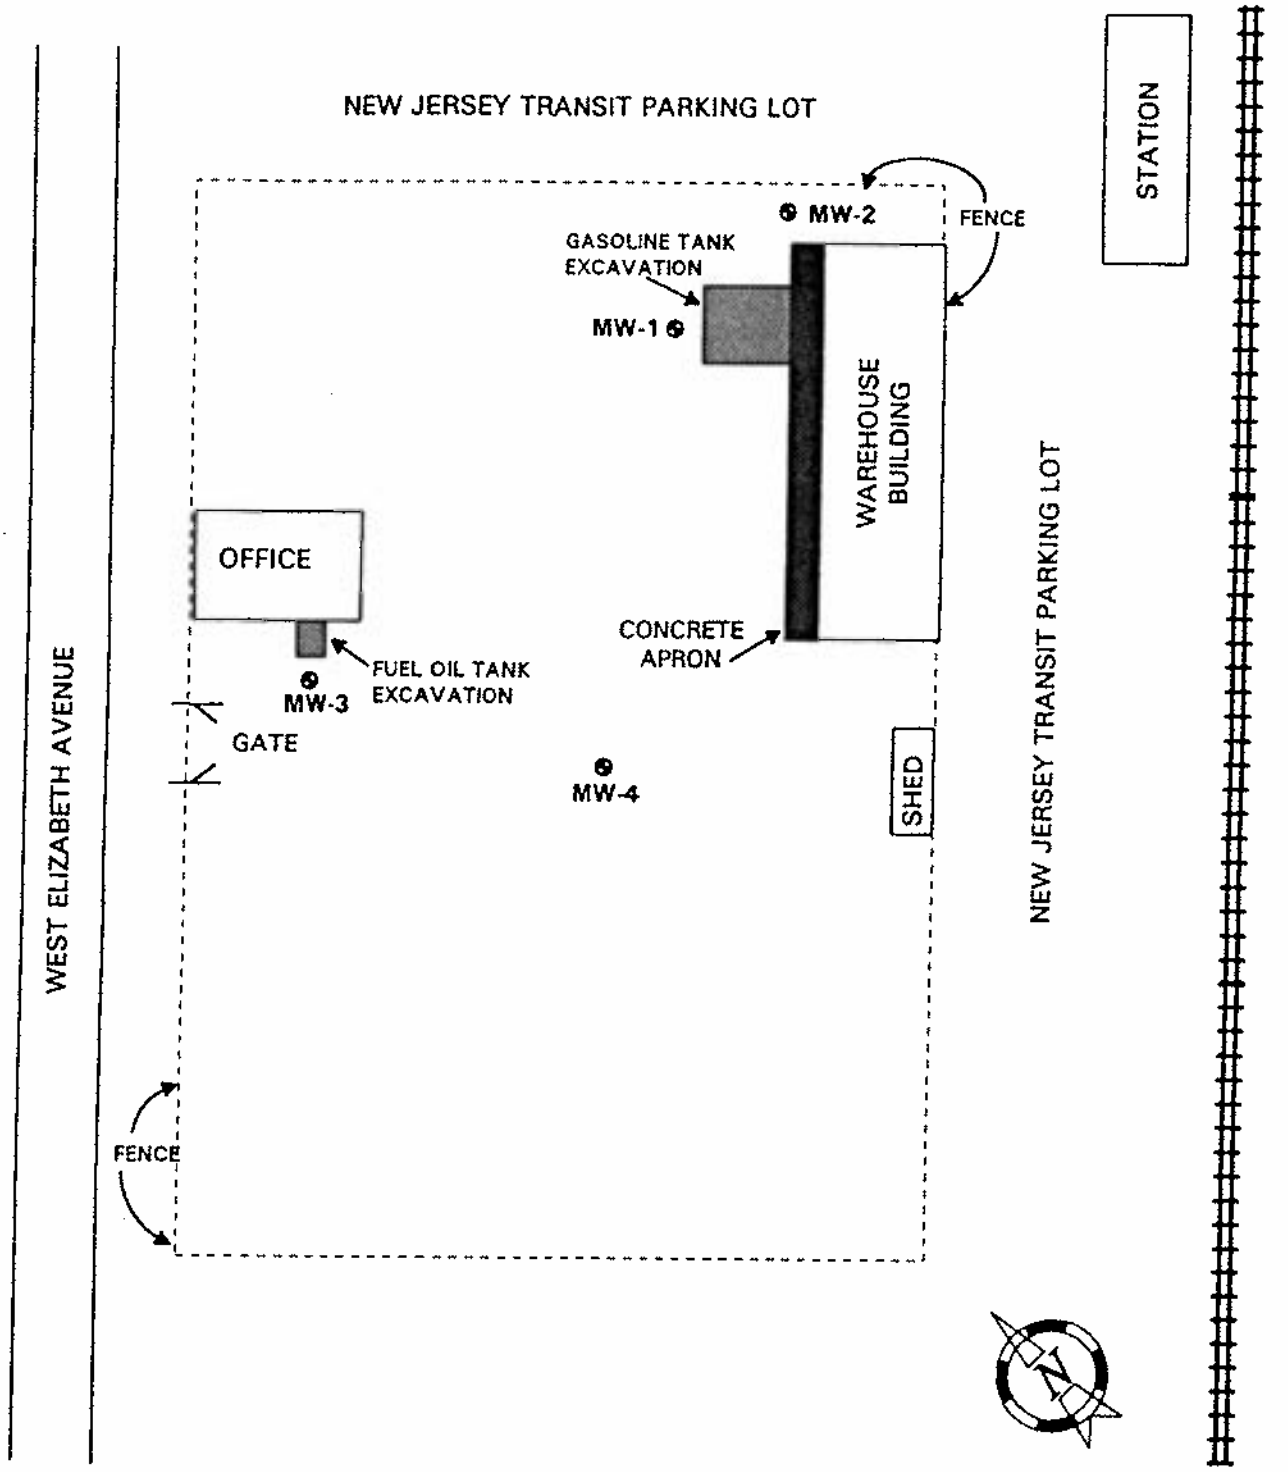
Details of each task are presented in the following sections.

3.1 Task 1 - Installation of Ground Water Monitoring Wells

Three 4" diameter ground water monitoring wells designated as MW-2, MW-3 and MW-4 were installed at the **Allied** site on November 19, 1993. The monitoring wells were installed utilizing a truck mounted air rotary drilling rig operated by **Summit Drilling Company** and supervised by a **Vectre Corporation** hydrogeologist. Figure 3 is a site plan depicting the location of the newly installed wells, as well as existing well MW-1 (installed in August 1993 by a previous consultant). Well logs and copies of the well permits are provided in Appendix A.

Borings for monitoring wells MW-2 and MW-4 were advanced to a depth of 20 feet below grade, and well MW-3 was advanced to a depth of 15 feet below grade. Drill cuttings were field screened with a ThermoEnvironmental Model 580B organic vapor meter (OVM) utilizing a photoionization detector. No OVM readings above zero were noted in any well.

After drilling to the appropriate depth the wells were completed in accordance with **NJDEPE** guidance documents and specifications. Each well was constructed with 4-inch diameter PVC solid casing and 0.020-inch slotted well screen. Each well was developed with a bailer and completed with a flush-mounted manhole and locking cap. Well construction details are presented in Appendix A.



SITE PLAN		
ALLIED BUILDING SUPPLY 101 WEST ELIZABETH AVENUE LINDEN NEW JERSEY

FIGURE NUMBER	PROJECT NUMBER	VECTRE™ Corporation
3	SEL-V1	

Subsurface materials consisted of seven to nine feet of red silty clay, overlying a fine to medium-grained sand varying in thickness from three to seven feet, underlain by red silty clay to the bottom of the hole. Well MW-3 was the most productive well, due to the thickest sand unit and shallowest water table. Wells MW-2 and MW-4 exhibited slow recharge characteristics, due to a lack of saturated thickness in the sand unit in MW-2 and a thinner sand unit in MW-4. Based upon purge rates during sampling, well MW-1 also has a relatively slow recharge rate.

Based upon local topography and surface hydrology, ground water flow is inferred to be southwest, towards Peach Orchard Brook. Well MW-2 was installed upgradient, well MW-3 was installed to assess the heating oil tank, and well MW-4 was installed to assess downgradient ground water conditions.

3.2 Soil Sample Collection

Soil samples were collected on November 24, 1994. A total of seven soil samples plus a field blank were collected. Soil sample locations are shown on Figure 4.

Soil Pile Samples

Soil excavated during removal of the gasoline tank was accumulated in three distinct piles at the **Allied** site. Location of the piles is shown on Figure 4. Soil pile #1 (sample SP1) is approximately 20 yd^3, soil pile #2 (sample SP2) is approximately 10 yd^3, and soil pile #3 (sample SP3) is approximately 45 yd^3 in volume. Each soil pile is approximately two to three feet high over most of its area, and SP1 is approximately four feet high at its highest point. The excavated material was generally sandy, with some clay, and concrete and asphalt pieces mixed in.

Each pile was screened with an OVM to identify the presence of organic vapors. Holes were dug using a shovel through the depth of the pile at several locations. No OVM readings above zero were recorded, and no odor or discoloration was observed. Screening locations are shown on Figure 4.

SOIL SAMPLING LOCATIONS		
ALLIED BUILDING SUPPLY 101 WEST ELIZABETH AVENUE LINDEN NEW JERSEY		
NOT TO SCALE		
FIGURE NUMBER 4	PROJECT NUMBER SEL-V1	VECTRE™ Corporation

Because field screening procedures did not identify contaminated areas and could not be used to bias the sample locations, a soil sample was collected from each pile at a central location in the thickest section of each pile, to minimize the possibility of collecting samples that had been subjected to intensive weathering and volatilization.

Soil samples for laboratory analysis were retrieved directly from the soil pile with a decontaminated stainless steel trowel by a **Vectre** geologist wearing clean disposable latex gloves. Prior to collection of soil samples, the sampling trowel was thoroughly cleaned and decontaminated using the following procedures:

. Device washed with laboratory cleaner and water
. Device rinsed 3 times with distilled water
. Device rinsed with reagent grade methanol and allowed to dry
. Device rinsed with distilled water
. Device allowed time to dry

The samples were stored in a cooler at approximately 4° C and transported to the laboratory. Samples from the soil piles were analyzed for volatile organic compounds +10 peaks using EPA Method 8240. Analytical results are presented in Section 4.

Heating Oil Tank Excavation Soil Samples

Three samples were collected from the excavation which formerly contained a 550-gallon heating oil tank for the office building on site. Samples were collected from the sidewalls of the excavation, approximately six inches above the water table. Each sample was collected from approximately six to eight inches into the sidewall, to avoid sampling material that was intensively weathered. The samples were comprised of a reddish silty clay. Each sample was collected with a trowel, labeled, and handled as described above. The samples were analyzed for total petroleum hydrocarbons using EPA Method 418.1. Analytical results are presented in Section 4.

Tank Grave Soil Sample Collection

A soil sample was collected from the location of former sample 105-T1-D. The sample was collected approximately 0.5 feet above the water table, using a long-handled soil trier. The sample submitted for analysis was collected from approximately eight to ten inches in the wall, to mitigate the effect of weathering in the open excavation. The sample was comprised of red silty clay. The sample was labeled GT-1 and submitted to a laboratory for analysis of volatile organics plus 10 peaks using EPA Method 8240.

3.3 Ground Water Sample Collection

Groundwater samples were collected from all four monitoring wells on December 7, 1994. Each well was purged at least 3 well volumes using a centrifugal pump, with the exception of MW-2, which was purged 91% of three volumes due to slow recharge. Depth to water and purging data are presented in Table 3.

After purging, each well was sampled using a new, disposable PVC bailer which was used for that well only. The samples were labelled and stored in a cooler at approximatley 4° C for transport to the laboratory. A trip blank and field blank were prepared for quality control/quality assurance and submitted for analysis. All samples were analyzed for volatile organic compounds plus 10 peaks using EPA Method 624. Analytical results are presented in Section 4.

4.0 ANALYTICAL RESULTS

4.1 Soil Sample Results

Soil sample results are summarized on Table 4. A complete laboratory analytical report including QA/QC procedures is provided in Appendix B.

Soil Pile Samples

Analytical results for the soil pile samples reported no target compounds above detection limits. No non-target compounds were reported in samples SP-1 and SP-2, and sample SP-3 reported a total of 0.50 mg/kg non-target compounds.

Heating Oil Tank Samples

Analytical results for the samples collected from the heating oil excavation reported concentrations of total petroleum compounds ranging from 29 mg/kg in OT-1 to 45 mg/kg in OT-3.

Former Gasoline Tank Excavation Soil Boring Sample Results

Analytical results for sample GT-1, collected from the location of previous sample 105-T1-D, reported concentrations of 0.015 mg/kg for total xylenes and 3.95 mg/kg for non-target compounds.

4.2 Ground Water Sample Results

Ground water sample results are summarized on Table 5, and a copy of the laboratory data package is included as Appendix C. No target or non-target compounds were reported above detection limits in monitoring wells MW-2, MW-3, and MW-4. Well MW-1 reported detectable concentrations of benzene, toluene, ethylbenzene, and xylene.

table 4

tab 5

5.0 CONCLUSIONS AND RECOMMENDATIONS

5.1 Conclusions

Soil Piles

Field screening and analytical results for soil samples collected from the soil piles indicate that no volatile organic compounds were identified in any of the soil piles. Because no compounds were identified above levels of regulatory concern, there are no restrictions on further use of the soil.

Heating Oil Tank Excavation

None of the post-excavation samples collected from the heating oil tank excavation reported concentrations of petroleum hydrocarbons above levels of regulatory concern.

Tank Grave Soil Sample

The soil sample collected from the gasoline tank excavation reported no compounds at concentrations above levels of regulatory concern.

Ground Water

Field screening of drill cuttings and analytical results for ground water samples indicate that none of the three wells installed for this investigation are impacted to any degree by volatile organic compounds. Analytical results for the sample collected from MW-1 report similar levels of BTEX as were reported during an earlier sampling round. Borings conducted in the area during previous investigation reported no soil contamination other than in the borehole converted to MW-1. It is apparent that the problem is very localized, because even in the presence of a transmissive sand no contaminants have been identified in the three other wells installed at the site.

5.2 Recommendations

Soil Piles

As there have been no contaminants detected in the soil piles above levels of regulatory concern, no further action is required and it is recommended that the soil be replaced in the excavation and clean backfill used to restore the site to grade.

Oil Tank Samples

As there have been no contaminants above levels of regulatory concern reported in the oil tank excavation, no further action is recommended beyond restoring to grade.

Tank Excavation

As there have been no contaminants above levels of regulatory concern reported in the resampling of the former soil boring 105-MW1-11 location, no further action is recommended.

Ground Water

The presence of gasoline constituents in MW-1 indicates that a very localized zone of contamination may exist in the immediate area. It is recommended that MW-1 be sampled again in approximately three months to document the natural remediation of ground water in its vicinity through biodegradation and attenuation. It is also recommended that all four monitoring wells be sampled within six months to reconfirm the stability of existing ground water conditions. The ground water samples should be analyzed for BTEX using EPA Method 602.

Re: Allied Building Supplies
101 West Elizabeth Avenue
Linden, Union County
Case Number 93-06-24-1425; UST Number 0129486

Dear Ms. Connors:

On June 24, 1993, the New Jersey Department of Environmental Protection (Department) received notification of a discharge of hazardous substances, regulated under the Underground Storage of Hazardous Substances Act (N.J.S.A. 58:10A-21 et seq), which occurred from the above referenced facility. On September 23, 1993 and October 7, 1993, the Department sent letters stating the requirements for the proper investigation and the initiation of corrective action at Allied Building Supply's facility. The Department received a report from Tri-State Environmental Consultants, Inc. dated May, 1993 a report from Sailer Environmental Incorporated dated August 11, 1993 and two reports from Vectre Corporation dated February, 1994 and May, 1994 for Allied Building Supply indicating that the following steps were taken in compliance with our requirements.

In June, 1993, a 2,000-gallon steel gasoline underground storage tank (UST) was removed by JBC Environmental and Tri-State Environmental Consultants. Holes were discovered in the tank and visually stained soils observed. Approximately 70 tons of soils were excavated and stockpiled on site. The NJDEP hotline was notified of the discharge. A 550-gallon heating oil UST was abandoned in place at the same time as the 2,000-gallon tank was removed. In July, 1993, seven soil samples were collected from the base and sidewalls of the gasoline tank excavation by Sailer Environmental. Xylene was found to exceed the soil cleanup criteria in two samples and a duplicate. The base sample reported 48 ppm xylenes and the sidewall sample reported 47 ppm xylenes with the sidewall duplicate reporting 194 ppm xylenes. In August, 1993, American Resource Consultants installed three borings around the excavation area and collected six soil samples. All samples were within soil cleanup criteria except sample 105-MW1-11 which exhibited 131 ppm xylenes. This boring was developed into a monitoring well (MW-1). In December, 1993, Vectre Corporation installed three additional groundwater monitoring wells, collected one confirmatory soil sample from the 2,000-gallon gasoline UST excavation and collected three soil samples from the 550-gallon fuel oil tank excavation as well as collecting one soil sample from each soil pile. All soil sample results were below soil cleanup criteria.

Four groundwater monitoring wells are located on site. MW-1 is adjacent to and upgradient of the 2,000-gallon gasoline UST excavation area and recorded elevated levels of BTEX in September, 1993 (7.8 ppm) and December, 1993 (18.150 ppm). MW-2, MW-3 and MW-4 were sampled in December, 1993 with results below the method detection limits for all parameters. December 7, 1993 groundwater data indicates that depth to groundwater is between nine feet and eleven feet and groundwater flow is in an easterly/southeasterly direction. Given the groundwater flow direction, no downgradient wells exist for MW-1 or the 2,000-gallon gasoline UST excavation. No free phase product was observed in the groundwater monitoring wells.

The Allied Building Supply facility is located at 101 West Elizabeth Avenue in a commercial section of Linden, New Jersey. The site is bordered to the northeast and southeast by the new Jersey Transit Parking Lots, to the northwest by Elizabeth Avenue and to the southwest by commercial properties. A well search of the area indicated ninety-three monitoring wells, seven industrial wells, one potable well, six piezometers, one recovery well and three domestic wells within a one mile radius of the site.

Pursuant to the Authority vested in the Commissioner of the New Jersey Department of Environmental Protection (Department) by the Underground Storage of Hazardous Substances Act (N.J.S.A. 58:10A-21 et seq.) and duly delegated to the Chief of the Bureau of Underground Storage Tanks, the above referenced Remedial Investigation Workplan, submitted on behalf of Allied Building Supply, is hereby approved by the Department as conditioned below:

I. Remedial Investigation

A. Soil

Allied Building Supply should indicate the linear distance between sample point GT-1 and former sample point 105-MW1-11.

B. Ground Water

Allied Building Supply shall install additional ground water monitoring wells to fully delineate the horizontal and vertical extent of ground water contamination. Contamination shall be delineated to the Ground Water Quality Standards, N.J.A.C. 7:9-6, unless otherwise approved by the Department. At a minimum, ground water monitoring wells shall be installed within the 2,000-gallon gasoline UST excavation area and downgradient of the 2,000-gallon gasoline UST excavation area given that MW-1 is upgradient of the excavation area and contains elevated levels of BTEX. If it is necessary to install wells off-site, Allied Building Supply shall provide documentation of written requests seeking access to install said monitoring wells on off-site properties within thirty (30) calendar days of receipt of this correspondence. Please be advised that N.J.S.A. 58:10B, a statute concerning site remediation, provides a cause of action for persons to obtain access to properties not owned by that person for the purpose of conducting remedial activities at that site. Please see the attached information on this provision of N.J.S.A. 58:10B for further information.

Allied Building Supply shall submit boring logs and the monitoring well construction details (Well Certification Forms A and B, enclosed) for all newly installed monitoring wells.

Allied Building Supply shall sample every monitoring well which does not contain free product and analyze the samples for volatile organics, methyl tertiary butyl ether (MTBE) and tertiary butyl alcohol (TBA) using EPA Method 624 calibrated for xylenes, with a library search (VOs) and for lead using EPA Method 200.7 (ICAP) or EPA 239.2 (Graphite Furnace) calibrated to achieve a method detection limit of 10 ppb. The SW-846 equivalent for this procedure is ICAP 3010/6010, sample prep 3050/6010 Furnace 3020/7421 sample prep 3050/2421.

For each sampling event, Allied Building Supply shall submit a table to include for each monitoring well: 1.) top of casing elevation; 2.) top of screen elevation; 3.) ground water elevation (corrected for free phase product if present); 4.) free phase product elevation (if present); and 5.) free phase product thickness (if present).

For each sampling event, Allied Building Supply shall construct a scaled isopleth map of free product thickness where free product exists, and scaled isopleth maps for dissolved product concentrations. Allied Building Supply shall submit the updated maps with each subsequent submittal.

Allied Building Supply shall construct and submit scaled, ground water table contour maps for each ground water sampling event.

C. **Receptor Evaluation**

The Department has no further requirements at this time.

II. Quality Assurance

All data submitted shall conform to the Reduced Laboratory Deliverables Format in accordance with the "Technical Requirements for Site Remediation", N.J.A.C. 7:26E (also see Enclosure #2), except where specifically indicated.

III. Other

A. **Certification Requirements**

It is important to note that effective April 25, 1992, all persons performing tank services must be certified per N.J.S.A. 58:10A-24.1-8. **All work related to any tank service must now be conducted by, or under the on-site immediate supervision of an individual certified in the activity being conducted.** All documents (permit applications, reports, proposals) submitted to BUST must be prepared and signed by a certified individual.

B. **Field Activity Notification**

Allied Building Supply shall notify the assigned BUST Case Manager at least 14 calendar days prior to implementation of all field activities. If Allied Building Supply fails to initiate sampling within 30 calendar days of the receipt of this letter, any requests for an extension of the required time frames may be denied.

C. Billing

On April 5, 1993, the UST Fee Rule (Amendments and New Rules at N.J.A.C. 7:14B) was proposed. This rule appeared in the February 22, 1994, New Jersey Register. Effective February 22, 1994, the Department will be billing you for the Department's oversight of all work conducted at your site. Documents submitted to the Department in accordance with the "Technical Requirements for Site Remediation" (N.J.A.C. 7:26E) will help reduce the time necessary for the Department oversight of your case. At this time, the Department intends to process bills on a semi-annual basis. Please consult the April 5, 1993 and February 22, 1994, State Registers for details. Copies can be obtained by contacting the Office of Administrative Law at (609) 588-6500. Your case manager should be contacted with any additional questions.

IV. Administrative Requirements

Based upon the above requirements and the data generated to date, Allied Building Supply is required to submit a RAW in accordance with N.J.A.C. 7:26E-6.2 and P.L. 1993, c.139 (S-1070). This document shall be submitted to this Bureau at the above address, within **ninety (90)** days upon receipt of this letter. The RAW shall detail all activities conducted to achieve compliance with the requirements listed in this letter (in the form of a Remedial Investigation Report (RIR) in accordance with N.J.A.C. 7:26E-4.9) and present a comprehensive remedial proposal for all soil and ground water contamination present as the result of the discharge(s) based upon all data collected to date. Please note that only one copy of the Quality Assurance/Quality Control Deliverables is needed. Guidance regarding the minimum requirements and presentation format for this document are provided below and in the enclosures.

It should be noted that if Allied Building Supply completes all of the above requirements and the data indicate that the remedial investigation has not been completed (i.e. contamination not completely delineated), Allied Building Supply shall submit a Remedial Investigation Workplan (RIW) in accordance with N.J.A.C. 7:26E-4.8 within the specified time frame. The RIW shall include a schedule of implementation of the remaining remedial investigation required and the submittal date of the RAW. Allied Building Supply also has the option of completing the remaining remedial investigation in accordance with N.J.A.C. 7:26E-4, followed by the submission of the RIR/RAW. If the latter option is selected, Allied Building Supply shall notify the Case Manager listed below, in writing, within two weeks prior to the specified time frame referenced above. This notification shall include a generic discussion of activities conducted to date and activities to be conducted, as well as a detailed schedule of implementation which includes the submission of the RIR/RAW.

The "Technical Requirements for Site Remediation" rules (N.J.A.C. 7:26E) appeared in the June 7, 1993, New Jersey Register and became effective on July 1, 1993. These rules contain the minimum technical requirements concerning the environmental investigation and remediation at contaminated sites or sites at which contamination is suspected. These rules are being used as the Department's primary technical document, replacing the Division of Responsible Party Site Remediation's Remedial Investigation Guide, the ECRA Cleanup Plan Guide, the Bureau of Underground Storage Tanks' (BUST) Scope of Work document (and appendices) and the BUST Technical Guidance Document.

It should be noted that technical requirements are included in subchapters 7, 8 and 9 of the regulations implementing the Underground Storage of Hazardous Substances Act (N.J.A.C. 7:14B-1-13 and 15). The responsible person(s) that are conducting an environmental investigation/remediation should be following the "Technical Requirements for Site Remediation" to accomplish the investigation. This will allow for consistent evaluation of any discharges and potential impacts.

V. Cleanup Criteria

The Department's most recent general guidance on contaminant cleanup criteria can be found in the April, 1994, edition of the Site Remediation Newsletter. It must be remembered, however, that the actual cleanup goal at a particular site is determined by the Department on a case-by-case basis and may be different than that in the above referenced newsletter. This variation may be due to many factors, including site specific human health and environmental exposure pathways, the presence of site contaminants not addressed in the newsletter, and site specific physical characteristics. In case specific situations, when cleanup criteria are modified from one previously established for that specific site, the Department will make every effort to expeditiously notify the responsible party. Please consult the Case Manager listed below to discuss any modifications which may impact your remedial actions.

If the person conducting a cleanup does not wish to remediate a contaminated site consistent with the newsletter, they shall submit a proposal to the Case Manager listed below that details the site specific circumstances and technical rationale for cleanup goals on a case-by-case basis.

Please note that the Ground Water Quality Standards (N.J.A.C. 7:9-6) have been adopted and appeared in the February 1, 1993, New Jersey Register. This rule adoption may impact requirements for ground water remediation and soil cleanup (i.e. where the soil may contribute contaminants to the ground water above the applicable standards) for a particular site and should be referenced and discussed with the Case Manager listed below.

VI. Remedial Action Workplan Submission

A. The Remedial Action Workplan Format (N.J.A.C. 7:26E-6)

To ensure a complete and timely review of the submittal, the RAW shall be a self-supporting document. As a guide to this process, the following elements shall be included in the formation of the plan:

1. Table of Contents

2. Introduction. Include site acreage, site use during the release, current site use, local land use, local topography, geology, and hydrogeology.

3. Summary of UST-Related Environmental Concerns. This shall include the results of all previous soil and ground water sampling in tabular form, including scaled site maps in the form of a Remedial Investigation Report in accordance with N.J.A.C. 7:26E-4.9. A detailed presentation of the items required (above) in this letter shall be included.

4. Effectiveness Analysis and Certification. This shall include an analysis and certification that the proposed remedial action meets the criteria contained in Section 35 (g) of P.L. 1993, c.139, including an analysis of long and short term effectiveness, implementability, timeliness, cost differential of permanent and nonpermanent remedies (if applicable), and community concerns. Please note that the Effectiveness Analysis and Certification supersedes the Remedial Alternative Analysis in N.J.A.C. 7:26E-5.

5. Summary of Proposed Remedial Actions. This shall include a detailed description of the remedial action and remedial technology(s) to be utilized for each area of concern for site cleanup, the media to be affected by each technology, scaled site maps detailing the areas where remedial action will be conducted (N.J.A.C. 7:26E-6.2(a)6), supporting technical information appropriate to the technology and volumes of each media to be remediated (including vertical and horizontal extent). The following technical information shall be included, where applicable to the remedial technology chosen:

   a. the hydraulic conductivity of the affected aquifer(s), including calculations;
   b. calculations and maps showing the predicted capture zones;
   c. calculations of the optimum pump rate and number of ground water and/or air withdraw points, or trench configuration required to control the plume;
   d. calculation of the ground water velocity prior to pumping;
   e. grain size analyses; and,
   f. soil total organic carbon content and pH.

   Also included shall be a map(s) and description of the ground water monitoring wells to be used to monitor the effectiveness of the remediation, both at the source and at down gradient compliance points.

6. Identification of the treatment and disposal methods to be employed for any ground water or soil to be removed.

7. Cleanup levels to be achieved. Be specific with regard to media and compounds.

8. Summary of any permits necessary to implement the cleanup. Please note that the Department will not approve a RAW which proposes to discharge to a publicly-owned treatment works (POTW) without the prior written consent of the POTW.

9. The RAW shall detail the specific activities that will be used to complete the proposed cleanup objectives.

10. A post-remedial sampling and monitoring plan for each media to be remediated.

11. A specific Schedule of Implementation of the RAW which includes milestones in the project in accordance with N.J.A.C. 7:26E-6.5(a).

12. A proposal for Quarterly Remedial Action Progress Reports for the duration of the cleanup in accordance with N.J.A.C. 7:26E-6.5(b) and (c).

13. Estimate of costs for the proposed remedial actions, which shall include:

a. capital costs;
b. operation and maintenance costs;
c. monitoring system costs;
d. laboratory costs;
e. engineering, legal and administrative costs;
f. contingency costs; and
g. summary of all remedial costs incurred to date (see below).

14. A summary of the **total** costs of the remedial actions conducted to date shall be submitted with any RAW or request for No Further Action. These costs shall be broken down as follows:

    a. tank removal and disposal costs;
    b. capital costs including monitoring systems and equipment;
    c. mobilization costs, operation and maintenance including labor, utilities and repairs;
    d. consulting and labor costs including engineering, environmental, legal and administrative costs;
    e. analytical/laboratory costs;
    f. sample collection costs; and
    g. disposal costs including transportation, waste transfer fees and facility tipping fees.

15. A quality assurance plan including proposed sampling and analytical methods pursuant to N.J.A.C. 7:26E-2.2.

16. A description of the soil and sediment erosion control and monitoring plan, and dust and odor control and monitoring plan, if applicable.

17. An administrative checklist is provided (Enclosure #1) and should be used as additional guidance when formulating the RAW.

B. Data Presentation

Summarized analytical results shall be provided in accordance with N.J.A.C. 7:26E-4.9. Please note that N.J.A.C. 7:26E-4.9 includes, but is not limited to, the requirement that compound specific data presentation is provided in tabular form. The Department recommends that Allied Building Supply refer to the attached "Guidelines for Data Presentation" for additional guidance in the preparation of its submittal (Enclosure #2). Allied Building Supply shall collect all samples in accordance with the sampling protocol outlined in the May 1992 edition of the "NJDEPE Field Sampling Procedures Manual".

C. Permit Applications

All appropriate permit applications shall be submitted either prior to or in concert with the RAW submission. Copies of all permit application cover letters shall be provided with the RAW. In addition, the Department has recently established the Office of Permit Information Assistance (OPIA). OPIA's responsibilities include providing permit information to the public and assisting permit applicants through the permit coordination process when a project requires permits from various programs. OPIA can be reached at (609) 984-0857.

As a reminder, a New Jersey Pollutant Discharge Elimination System (NJPDES) Discharge to Ground Water (DGW) permit will be required for any remedial system which involves a direct discharge to ground water (re-injection, overland flow, etc.) and some on-site soil treatment technologies which include a discharge to ground water. Since the case manager will be processing the NJPDES-DGW permit, the NJPDES-DGW permit application shall be submitted directly to the BUST Case Manager listed below. The DGW Permit for re-injection will also act as the Treatment Works Approval for the site. However, a licensed operator is required for the treatment system in accordance with N.J.A.C. 7:10-13 et seq. Please note that if ground water remediation activities result in a discharge to surface water, Allied Building Supply shall also obtain a NJPDES Discharge to Surface Water Permit (DSW), Category B (Industrial/Commercial Surface Water Discharge) or Category B4B (General Ground Water Petroleum Products Clean-up (GPPC) Permit). Any

discharge to a POTW in excess of 25,000 gallons per day requires a NJPDES Significant Indirect User Permit (NJPDES-SIU), Category L (Indirect Discharge to POTW). If ground water will be treated prior to discharge to surface water or to a POTW, a Treatment Works Approval (TWA) shall also be obtained. Air discharges from any remedial systems also require permit applications to be submitted to the Bureau of New Source Review. Finally, surface or ground water withdrawal in excess of 100,000 gallons per day (or 10,000 gallons or more in critical aquifers) requires approval by the Department. For further information contact, the Bureau of Permit Management (NJPDES-DSW or SIU) at (609) 984-4428, the Bureau of Connection and Construction (TWA) at (609) 984-4429, the Bureau of New Source Review (Air Permits) at (609) 292-6716, or the Bureau of Water Allocation (ground water withdrawal) at (609) 292-2957.

If Allied Building Supply fails to submit the required report within the referenced due date, this case will be referred to the Bureau of Applicability and Compliance (BAC) for review. The Department may initiate enforcement action including, but not limited to, the assessment of penalties and revocation of tank operating registrations pursuant to N.J.S.A. 58:10A-21 et seq. and N.J.A.C. 7:14B-12. The Department reserves the right to implement all enforcement measures, including the right to revoke tank operating registrations and assess penalties from the original due date.

If the tank(s) at the referenced facility is/are regulated under the federal Hazardous and Solid Waste Amendments of 1984 and Allied Building Supply fails to comply with the above requirements, this case may be referred to the United States Environmental Protection Agency (USEPA) for violations of 40 CFR Part 280.

Please note, pursuant to N.J.S.A. 58:10A-21 et seq. and N.J.A.C. 7:14B et seq., the owner and operator of the regulated underground storage tanks are strictly liable for compliance with these requirements. Violators are liable for penalties of up to $50,000 per day for each day of continuing violation and revocation of tank registrations.

If you should have any questions regarding this matter, please contact Allan Motter, Case Manager, of the Bureau of Underground Storage Tanks at (609) 984-3156.

Sincerely,

Erick P. Kinsel

Case Number 93-06-24-1425; UST Number 0129486

Dear Ms. Connors and Mr. Winters:

On November 29, 1994, the New Jersey Department of Environmental Protection (Department), represented by Allan Motter, Case Manager, inspected the Allied Building Supplies site and observed the installation of two (2) additional monitoring wells. The following observations were made:

Drilling of well to the southeast of the main on site building (between property and Pennsylvania Railroad) was in progress when Mr. Motter arrived on site. Mr. Motter met with Doug Harm of Brinkerhoff Environmental Services, Inc. who is serving as Allied Building Supplies' consultant. Diamond Drilling Co. of Jackson, NJ steam cleaned the hollow stem augers and set the well at seventeen feet (17') in depth (with ten feet [10'] of screen); the new well is forty-five feet (45') from the eastern corner of the building on the southeastern side and is ten feet (10') from the building wall adjacent to the garage door. The boring for second monitoring well was started at thirty-one feet (31') from the northern corner of the building and five feet (5') from the wall within the gasoline tank excavation. Water was encountered at two feet (2') and well was screened from two to twelve feet (2' - 12').

Mr. Motter observed that MW-1 had been excavated during backfilling of the gasoline tank excavation and observed the concrete which had surrounded the standpipe and the excavated standpipe with a portion of the PVC casing still attached. Mr. Motter and Mr. Harm could not locate the previous position of MW-1. Mr. Motter and Mr. Harm proceeded to measure distances between buildings, excavations and monitoring wells. It was observed that MW-3 is approximately twenty-five feet (25') from the heating oil tank excavation.

Mr. Motter observed five (5) drums labelled: MW-1 soil 8/29/93; MW-1 Development Water 8/30/93; MW-1 Soil 8/29/93; MW-1 Soil 8/29/93; and SB-2 Soil 8/29/93 located on the concrete pad. These drums were filled with material. Five (5) empty or partially rubble filled drums were also observed scattered throughout the site.

Based upon the observations during the site investigation, the following deficiencies shall be addressed as required below. The results of the additional remedial investigations required shall be submitted as part of a Remedial Action Workplan (RAW), previously required by the Department's August 12, 1994 letter to Allied Building Supplies' representatives and due January 31, 1995.

Remedial Investigation

A. Monitoring Well MW-1

Allied Building Supplies shall either locate and restore monitoring well MW-1 or locate and properly abandon monitoring well MW-1 and re-install a replacement monitoring well MW-1A within ten feet (10') of the former MW-1 location. Allied Building Supplies shall submit boring logs and the monitoring well construction details (Well Certification Forms A and B, enclosed) for all newly installed monitoring wells. Allied Building Supplies shall submit a Well Abandonment Form for all abandoned monitoring wells.

B. Waste Disposal

Pursuant to N.J.A.C. 7:26-8.5, Allied Building Supplies shall determine if the drummed wastes are hazardous wastes. Allied Building Supplies shall provide any sample results and the rationale used for the categorization of all wastes generated by this investigation and/or cleanup to assure proper handling and disposal. Please be advised that improper waste treatment, storage or disposal of hazardous wastes is a violation of State and Federal Hazardous Waste Regulations. As a reminder, all non-hazardous waste must be removed from the site to an approved facility within six months after generation. Allied Building Supplies shall remove all hazardous waste to an approved facility within 90 days after generation. Interim storage of hazardous waste shall be in accordance with N.J.A.C. 7:26-9. The storage of hazardous waste in piles is strictly prohibited. Please be advised that all soils reuse plans must be prepared in accordance with the "Management of Excavated Soils" guidance document and shall receive prior approval from the Department before their implementation.

C. Heating Oil Tank and MW-3

Oversite of the 550-gallon fuel oil tank which was abandoned in place is being transferred to the Bureau of Field Operations, Case Assignment Section for reassignment. Please direct all correspondence to:

New Jersey Department of Environmental Protection
Bureau of Field Operations
Case Assignment Section
Attention: Mark Pederson
401 E. State Street, 4th Floor
CN 028
Trenton, NJ 08625

Enclosed find a Memorandum of Agreement (MOA) package which will allow Allied Building Supplies to address this area of concern under an MOA managed by the Bureau of Field Operations. It should be noted that the monitoring well installed to monitor the abandoned tank is located over twenty-five feet from the abandoned tank in a side gradient direction.

If you should have any questions regarding this matter, please contact Allan Motter, Case Manager, of the Bureau of Underground Storage Tanks at (609) 984-3156.

Sincerely,

Erick P. Kinsel, C.P.G., Unit Supervisor
Bureau of Underground Storage Tanks

NJDEP Case #93-06-24-1425

February 23, 1995

1.0 Introduction

Brinkerhoff Environmental Services, Inc. (BES) was retained by SELRITE Millwork Corporation to prepare a Remedial Action Workplan (RAW) Addendum for Allied Building Supplies (Allied) in accordance with the August 12, 1994 NJDEP correspondence addressed to Mr. Daniel Winters of Allied. The site is located at 101 West Elizabeth Avenue, Linden, Union County (see Figure 1). The RAW Addendum included the installation of two (2) groundwater monitoring wells, groundwater sampling and laboratory analysis.

During previous site activities, the casing and upper two (2) feet of monitoring well MW-1 had been damaged. This well was repaired two weeks before sampling was performed.

The following report presents the results of the investigation, including a request for natural attenuation at this site.

2.0 Groundwater Investigation

2.1 Monitoring Well Installation and Repair

On November 30, 1994, two (2) four (4) inch PVC monitoring wells were installed at the site by Diamond Drilling Company, Inc. Monitoring well MW-5 was installed within the former UST excavation at the downgradient edge and MW-6 was installed downgradient of the former excavation (see Figure 2). Monitoring well records are included as Exhibit I of this report.

During previous site activities monitoring well MW-1 was damaged. On December 29, 1994, MW-1 was repaired by Diamond Drilling. The protective casing and upper two feet of solid PVC were repaired. With the exception of the upper two feet of the well, MW-1 was relatively free of debris. The well was purged to assure any debris in the well was removed.

Wells MW-1, MW-5 and MW-6 were surveyed to a site bench mark by a licensed surveyor. All six (6) wells are tied to the same benchmark. Certification Forms A and B are included in Exhibit I of this report.

2.2 Groundwater Sampling

On January 16, 1995, the six (6) monitoring wells located on the property were sampled by BES personnel in accordance with the May 1992 NJDEP *Field Sampling Procedures Manual*. The samples were collected within two feet of the static water level after purging the wells a minimum of three standing columns of water. The monitoring well samples were collected with a dedicated stainless steel and Teflon bailer which was laboratory cleansed, then transferred to sealed laboratory glassware suitable for volatile organic compounds and lead. Monitoring well data forms are included in Exhibit II of this report.

2.3 Groundwater Analytical Summary

The samples collected, designated MW-1 through MW-6 and a field and trip blank, were submitted to a New Jersey certified laboratory, Accredited Laboratories, Inc., for analysis. Samples were analyzed for volatile organic compounds with a forward library search (VO+10), MTBE, TBA, and lead. Laboratory analytical results are included as Exhibit III of this report and summarized in Table I, below.

TABLE I
Groundwater Sampling Results
Volatile Organic Compounds, MTBE, TBA and Lead
Allied Building Supply
January 16, 1995
(results in ppb)

Sample ID	Benzene	Toluene	Ethylbenzene	Total Xylenes	MTBE	TBA	Lead	TIC's
MW-1	~~35~~ 37	79	60	267	50U	50U	~~46~~ 12	~~189~~ 263
MW-2	5U	5U	5U	5/10U	50U	50U	10U	~~298~~ 8
MW-3	5U	5U	5U	5/10U	50U	50U	10U	ND
MW-4	5U	5U	5U	5/10U	50U	50U	10U	ND
MW-5	5U	5U	5U	5/10U	50U	50U	~~12~~	ND
MW-6	5U	5U	5U	5/10U	50U	50U	15.8	ND
Field Blank	5U	5U	5U	5/10U	50U	50U	10U	ND
Trip Blank	5U	5U	5U	5/10U	50U	50U	-	ND
*NJDEP Standard	1	1,000	700	40	700	500	10	-

U-Not detected above instrument detection limit. Preceding number is detection limit; ND-Compound not detected; *NJDEP Class II-A Specific Groundwater Quality Criteria; Please note that MW-1 and MW-5 were inadvertently mislabeled during sampling activities. Corrections have been made on the attached laboratory data.

Volatile organic compounds and lead were detected in sample MW-1. Benzene was detected at a concentration of 35 parts per billion (ppb), total xylenes were detected at a concentration of 267 ppb, and lead was detected at a concentration of 46 ppb. Lead was also detected in samples MW-5 and MW-6 at concentrations of 12 ppb and 15 ppb, respectively. No other volatile organic compounds were detected, with the exception of trace levels of methlyene chloride and acetone, common laboratory contaminants.

Groundwater sampling results show a decrease in the level of petroleum related compounds in MW-1 since the previous sampling event conducted by Vectre, Inc. in December 1993. The December 1993 sampling event reported benzene at 350 ppb, toluene at 7,500 ppb, ethylbenzene at 1,600 ppb and xylenes at 2,230 ppb.

2.4 Site Hydrogeology

Subsurface soil consists of red clayey fine sand with some medium coarse sand pebbles and shale fragments to a depth of 17.5 feet below grade, the maximum depth of stratigraphic section drilled.

Depth to groundwater ranged from 2.17 feet in MW-5 to 12.43 feet in MW-6. The shallow depth of groundwater in MW-5, located within the former UST excavation, is likely due to perched water within the former tank field area. Groundwater flow direction is toward the northeast as shown on Figure 3 - Groundwater Contour Map. A small anomaly in flow direction is present at MW-5. This well is located within the former tank excavation and shows a false high in depth to groundwater, caused by water perched within the former excavation. Monitoring well data is presented in Table II, below.

TABLE II
Monitoring Well Data
Allied Building Supply
January 16, 1995
(results in feet)

	MW-1	MW-2	MW-3	MW-4	MW-5	MW-6
Casing Elevation	29.23	30.29	27.98	28.19	29.71	30.60
Well Depth	15.15	19.55	14.45	19.45	12.61	17.09
Depth to Screen	2.98	N/A	N/A	N/A	N/A	7.52
Depth to Groundwater	9.76	11.11	8.18	8.49	2.17	12.43
Product Thickness	0.0	0.0	0.0	0.0	0.0	0.0
Groundwater Elevation	19.47	19.18	19.80	19.70	27.54	18.17

3.0 Recommendations

BES conducted a remedial investigation at Allied Building Supplies, which included the installation and sampling of groundwater monitoring wells.

Groundwater sampling results showed gasoline related volatile organic compounds in only one (1) of the six (6) monitoring wells on-site. Benzene was detected at 35 ppb and xylenes were detected at 267 ppb in well MW-1, which is located on the immediate upgradient edge of the former tank excavation. Monitoring wells MW-2, MW-5 and MW-6, located downgradient to slightly side gradient of the former UST excavation, reported no detectable gasoline related volatile organics.

Lead was detected in three (3) monitoring wells at levels ranging from 12 ppb in MW-5, 15 ppb in MW-6 and 46 ppb in MW-1.

BES recommends natural attenuation be considered as a mechanism for remediation at this site. Laboratory analytical data and site specific geologic and hydrogeologic conditions favor natural attenuation. Only one (1) well has shown localized levels of gasoline related volatile organics and no gasoline related volatile organics were detected in downgradient wells. The abundant clay in subsurface sediment and the perched water present within the former tank excavation suggest a slow groundwater flow rate at this site. The combination of both a limited extent of impacted groundwater and a slow migration rate indicate natural attenuation will be effective in preventing any off-site migration of contaminants.

An in-depth discussion of natural attenuation as an appropriate remedial method for this site is set forth in the Remedial Action Workplan dated May 1994, which was previously submitted to your attention.

This report was prepared and is respectfully submitted by:

UST #0129486
NJDEP Case #93-06-24-1425

February 27, 1996

1.0 TECHNICAL OVERVIEW

The Allied Building Supplies (Allied) site is located at 101 West Elizabeth Avenue in the City of Linden, Union County, New Jersey (see Figure 1). A Remedial Action Workplan (RAW) was submitted by Vectre Corporation for the Allied site in May of 1994. The RAW proposed natural remediation/attenuation as the remedial alternative for the site.

In January of 1995, Brinkerhoff Environmental Services, Inc. (BES) was retained by SELRITE Millwork Corporation to conduct a site investigation for the Allied site. The remedial investigation was conducted to provide supportive data to the May 1994 RAW, and included the installation of two (2) ground water monitoring wells (MW-5 & MW-6), and collection and analysis of ground water samples. Figure 2 is a site map depicting well locations relative to property boundaries and structures.

Following the investigation, BES prepared a Remedial Action Workplan Addendum (RAWA) dated February 23, 1995, summarizing well installation, ground water sampling and results. Elevated levels of lead were detected in Wells MW-1, MW-5, and MW-6, and elevated levels of benzene and xylenes were detected in Well MW-1, during the January 6, 1995 ground water sampling event. Hydrogeological data collected during the investigation indicated a ground water mound was present in the area of the former gasoline underground storage tank (UST) excavation area surrounding Well MW-5 (see Figure 3).

The following Remedial Action Report (RAR) addresses outstanding issues regarding the Allied investigation, including recommendations for Case Closure through natural attenuation and designation of a Classification Exception Area (CEA). Activities conducted as part of this RAR are discussed below.

Previous soil sampling and analysis indicated elevated levels of xylenes remained in the soil surrounding the former gasoline UST excavation. BES supervised excavation of soil in the area of the elevated xylene samples, collected postexcavation soil samples, and disposed of contaminated soil removed from the excavation.

Four (4) on-site ground water monitoring wells were resampled using the "Low Flow" sampling methodology to reduce turbidity and sediment within the samples. A Ground water contour map was prepared for the sampling event. To assess aquifer characteristics necessary for calculating

contaminant transportation and degradation rates, rising head slug tests were conducted on Wells MW-2 and MW-6.

Activities associated with this RAR were conducted in accordance with the Technical Requirements for Site Remediation, N.J.A.C. 7:26E. Sampling was performed in accordance with May 1992 NJDEP *Field Sampling Procedures Manual*. Cleanup Standards were based on the Soil Cleanup Criteria, revised on February 3, 1994 and Ground Water Quality Standards, N.J.A.C. 7:9-6.

2.0 SOIL REMEDIATION

Since previous soil sampling results indicated elevated levels of xylenes remained in the soil along the southern perimeter of the former gasoline UST excavation, BES proposed to excavate and dispose of additional soil in this area. Previous soil sampling results are summarized in Table 1, below, and depicted on Figure 4.

Table 1
Previous Soil Sampling Results
(Results in ppm)

Sample #	Xylenes	*NJDEP
105-T1-01 [1]	**47**	10

105-T1-05 [1]	**48**	10
105MW1-11 [2]	**131**	10

*NJDEP - NJDEP Impact to Ground Water Soil Cleanup Criteria; [1]Samples collected by Sailer Environmental in July 1993; [2]Samples collected by American Resources Consultants, Inc. and reported in September 1993.

On January 24, 1996, under the supervision of BES, Disposal Systems Inc. excavated additional soil in the area of the former gasoline UST and as depicted in Figure 4. Approximately 15 tons of soil were removed from the area, and disposed of through Soil Remediation of Philadelphia. A soil disposal manifest is included in Exhibit I of this report.

Soil types encountered during the excavation included a brown to red-brown sandy silt loam and gravel fill material (within the former excavation area) and a red silty clay loam native soil (outside the former excavation area). At a depth of 10 feet below grade, soil lithology changed from a red silty clay loam to a fine sandy loam. Soil was excavated to a depth of 12.5 feet below grade. Samples were collected at 10.5 feet below grade, where soil was moist to wet, but not saturated. Soils were completely saturated at 11 feet below grade. Ground water was encountered at 10.5 feet below grade during excavation.

Three (3) postexcavation soil samples (EXS-1, EXS-2 and EXS-3) were collected from the west and south sidewalls of the excavation, as depicted on Figure 4. Postexcavation soil sampling results are summarized in Table 2 below, and presented in Exhibit II of this report.

The excavated soil was field screened using an Hnu photoionization detector. Readings ranged from 150 to 200 meter units for the soil excavated. Headspace readings on split samples collected at the location of soil samples ranged from five (5) to 25-meter units (see Table 2).

Table 2
Post-Excavation Soil Sampling Results
January 24, 1996
(Results in ppm)

Sample #	Depth	Hnu Readings	Xylenes	*NJDEP
EXS-1	10.5'	5 - 10	<0.1	10
EXS-2	10.5'	< 5	ND	10
EXS-3	10.5'	20 - 25	<0.1	10

Hnu Readings are reported in meter units; ND - Denotes compound was not detected above the method detection limit; *NJDEP Impact to Ground Water Soil Cleanup Criteria.

Postexcavation soil sampling results indicate xylene concentrations are below NJDEP Impact to Ground Water Soil Cleanup Criteria.

3.0 GROUND WATER INVESTIGATION

3.1 Ground Water Monitoring, Sampling & Analysis

On December 21, 1995, four (4) of the six (6) on-site monitoring wells, MW-1, MW-2, MW-5 and MW-6, were sampled by BES personnel. Samples were collected within two (2) feet of the static water level after purging the wells a minimum of three (3) standing columns of water using the NJDEP approved "Low Flow" purging methodology for metals in ground water. Ground water samples were collected using dedicated bailers, then transferred to laboratory-cleansed glassware suitable for volatile organic compounds and lead. Monitoring well sampling data forms, detailing well gauging information, are included in Exhibit III of this report.

3.2 Ground Water Analytical Results

Samples MW-1, MW-2, MW-5 and MW-6, including a field and trip blank, were analyzed by a New Jersey certified laboratory, Accredited Laboratories, Inc. Samples were analyzed for volatile organic compounds with a forward library search (VO+10) calibrated for xylenes, methyl tertiary butyl-ether (MTBE), tertiary butyl-alcohol (TBA), and lead. Laboratory analytical results are summarized in Table 3 below, and presented in Exhibit IV of this report.

Table 3
Ground Water Sampling Results
Volatile Organic Compounds, MTBE, TBA and Lead
December 21, 1995
(Results in ppb)

Compound	MW-1	MW-2	MW-5	MW-6	*NJDEP Standard
Benzene	**120**	ND	ND	ND	1
Toluene	**4400**	ND	ND	ND	1000
Ethylbenzene	**3200**	ND	ND	ND	700
Xylenes	**6400**	ND	3.5	ND	~~40~~ (1000)
MTBE	ND	ND	ND	ND	~~700~~ (70)
TBA	ND	ND	ND	ND	500
Lead	**12.6**	ND	ND	ND	10

ND - Denotes compound was not detected above the method detection limit *NJDEP Class II-A Ground Water Quality Standards.

Benzene, toluene, ethylbenzene, xylenes (BTEX) and lead were detected in Sample MW-1, at concentrations above the NJDEP Class II-A Ground Water Quality Standards (GWQS). Xylenes were detected in Sample MW-5 at 3.5 parts per billion (ppb), below the NJDEP Class II-A GWQS of 40 ppb.

Historical ground water sampling results indicate a general decreasing trend in the level of petroleum-related volatile organic compounds in MW-1 since the initial sampling event conducted by Vectre, Inc. in December 1993. Table 4 is a summary of historical Ground Water Data.

Table 4
Historical Ground Water Sampling Results
Wells MW-1, MW-5 & MW-6
(Results in ppb)

	MW-1			MW-5			MW-6			*NJDEP
Compound	12/93	1/95	12/95	12/93	1/95	12/95	12/93	1/95	12/95	
Benzene	**350**	35	**120**	NI	ND	ND	NI	ND	ND	1
Toluene	**7500**	79	**4400**	NI	ND	ND	NI	ND	ND	1000
Ethylbenzene	**1600**	60	**3200**	NI	ND	ND	NI	ND	ND	700
Xylenes	**8700**	267	**6400**	NI	ND	3.5	NI	ND	ND	~~40~~ (1000)
Lead	NA	**46**	**12.6**	NI	12	ND	NI	15	ND	10

NA - Denotes sample was not analyzed for compound; NI - Denotes well was not yet installed; ND - Denotes compound was not detected above the method detection limit; *NJDEP - NJDEP Class II-A Ground Water Quality Standards.

From January of 1995 to December of 1995, lead concentrations have decreased from 46 ppb to 12.6 ppb in Well MW-1, and from 12 ppb and 15 ppb to nondetect in Wells MW-5 and MW-6, respectively. The decrease in lead concentrations is most likely due to implementation of the "Low Flow" sampling methodology for metals in ground water. The nondetectable levels reported

in MW-5 and MW-6, after using the low flow purging method, indicated that the lead previously detected was likely the result of suspended solids and not impacted ground water.

Previous sampling for volatile organic compounds and lead reported nondetectable levels in Wells MW-2, MW-3, and MW-4.

The reason for the increase in sampling results from January 1995 and December 1995 may be the result of the use of the slow purge sampling method, which would cause less volatilization of organic compounds during purging and sample collection.

3.3 Well Search

A well search was conducted by Vectre Corporation as part of the May 1994 RAW. The search included all domestic, industrial, potable and monitoring wells within a one (1) mile radius of Allied. The search identified three (3) domestic wells, seven (7) industrial wells, one (1) potable well, six (6) piezometers, one (1) recovery well and 93 monitoring wells within one (1) mile of the site. The depth of the domestic wells and potable well are greater than 100 feet and the wells do not draw water from the shallow water table aquifer. A canvass of the area revealed no wells located within 500 feet of the site. Basements were not identified immediately downgradient of the site.

3.4 Aquifer Characteristics & Classification Exception Area Application

On December 21, 1995, prior to well purging and sampling, the six (6) on-site ground water monitoring wells were gauged. Monitoring well gauging data is presented in Table 4, below.

Table 5
Monitoring Well Gauging Data
December 21, 1995
(Results in feet)

Monitoring Well	MW-1	MW-2	MW-3	MW-4	MW-5	MW-6
Headspace Reading	60	0	0	0	0	0
Casing Elevation	29.23	30.29	27.98	28.19	29.71	30.60
Well Depth	12.61	19.55	14.45	19.45	15.15	17.09
Depth to Screen	2.98	N/A	N/A	N/A	N/A	7.52
Depth to Ground Water	9.59	10.72	7.93	7.73	2.05	11.89
Product Thickness	0.00	0.00	0.00	0.00	0.00	0.00
Ground Water Elevation	19.64	19.57	20.05	20.46	27.66	18.71

N/A - Data not available.

Depth to ground water ranged from 2.05 feet in Well MW-5 to 11.89 feet in Well MW-6 during the December 21, 1995 sampling event. Ground water flow is toward the north to north-northeast, as depicted on Figure 5 - Ground Water Contour Map. This flow direction represents a

increased precipitation during the past 60 days. The ground water flow direction in January 1995 was toward the northeast. A small anomaly in flow direction is present surrounding Well MW-5, located within the former gasoline UST excavation, and may be due to mounded water within the former tank field area.

3.4.1 Hydraulic Conductivity

To evaluate hydraulic conductivity, BES field personnel conducted aquifer "slug" testing on Wells MW-2 and MW-6. A volume of water was removed from each well using a dedicated stainless steel bailer while monitoring changes in static water level over time using a Hermit Data Logger. A quantitative hydrogeologic assessment of the data was performed using the AQTESOLV ground water modeling program. The slug test data was analyzed using the Bouwer and Rice method for unconfined aquifers. Hydraulic conductivity and ground water and pollutant transport rates were calculated using the slug test data and AQTESOLV modeling calculations. Slug test data is included in Exhibit V of this report.

3.4.2 Ground Water Velocity

The rate of ground water movement in the area of concern was determined using the ground water velocity equation derived from a combination of Darcy's law and the velocity equation of hydraulics. Ground water velocity was then expressed as:

$$Vs = K \times i/ne$$

Where:

Vs = seepage velocity
K = hydraulic conductivity (calculated from slug test data)
i = hydraulic gradient (calculated from ground water flow data)
ne = effective porosity (assumed at 20%)
x = multiplication symbol

Ground water velocity in the area of concern was then calculated:

$$Vs = 0.0002592 \text{ ft/min} \times 0.01 \text{ ft/ft} / 0.20 \qquad 1.296 \times 10^{-4} \text{ cm/sec}$$
$$Vs = 0.000013 \text{ ft/min}$$

Assuming a porosity of 20%, and using a calculated hydraulic gradient of 0.01 feet per foot obtained from the most recent ground water contour map, ground water velocity is determined to be 6.83 feet per year.

3.4.3 Pollutant Transport Rate

Applying a pollutant transport rate calculation to the ground water velocity rate, calculated above, the following retardation factor is derived:

$$Rd = 1 + (KOC \times foc \times pb/ne)$$

Where:

Rd = retardation factor
KOC = soil sorption coefficient (63 - standard benzene coefficient)
foc = fraction of organic carbon (assumed at 0.005)
pb = bulk density (assumed at 1.5 g/ml.)
ne = effective porosity (assumed at 20%)

The retardation factor is then calculated:

$$Rd = 1 + (63 \times 0.005 \times 1.5/0.20)$$
$$Rd = 3.36$$

The pollutant (benzene) transport rate is then calculated as follows:

$$Vpt = V/Rd$$
$$Vpt = 6.83 \text{ ft/yr.}/3.36$$

Using this formula, assuming a bulk density of 1.5 grams per milliliter, a fraction of organic carbon content of 0.5%, and a porosity of 20%, the benzene transport rate is calculated to be approximately 2.03 ft/yr. This slow contaminant transport rate explains why gasoline related volatile compounds have not been detected in Well MW-2, located down gradient of the former UST's.

Based on the benzene transport rate calculated above, an average benzene half-life of 200 days, and an initial benzene concentration of 350 ppb, dissolved benzene concentrations are expected to naturally degrade to 1.0 ppb within approximately 4.6 years and 9.3 feet downgradient of Well MW-1. A CEA designation is requested, using natural attenuation as the method of remediation, for a duration of five (5) years and 20 feet downgradient of Well MW-1, as depicted on Figure 6 - Classification Exception Area Designation Map.

4.0 CONCLUSIONS AND RECOMMENDATIONS

BES conducted a remedial investigation at Allied Building Supplies, located at 101 West Elizabeth Avenue in the City of Linden, Union County, New Jersey. The investigation included additional soil removal in the former gasoline UST excavation area, disposal of contaminated soil removed from the excavation, collection and analysis of postexcavation soil samples, and collection and analysis of ground water samples from Wells MW-1, MW-2, MW-5 and MW-6.

4.1 January 24, 1996 Postexcavation Soil Sampling

Postexcavation soil sampling results reported xylenes below Impact to Ground Water Soil Cleanup Criteria in the area of the former gasoline UST excavation area. Less than one-tenth (0.1) of one part per million (ppm) of xylenes were detected in two (2) of the three (3) soil samples (EXS-1 & EXS-3). Xylenes were not detected above the method detection limit in sample EXS-2. Therefore, No Further Action (NFA) is requested with regard to soils in the subject area.

4.2 December 21, 1995 Ground Water Sampling

Benzene, toluene, ethylbenzene, xylenes, and lead were detected in Well MW-1 at concentrations above the NJDEP Class II-A GWQS. Xylenes were detected in Well MW-5 at 3.5 ppb, below the NJDEP Class II-A GWQS of 40 ppb. Lead was not detected above the method detection limit in samples MW-2 and MW-6.

Historical ground water sampling results indicate a decreasing trend in BTEX compounds detected in Well MW-1. Lead concentrations have decreased from 46 ppb to 12.6 ppb in Well MW-1, and from 12 ppb and 15 ppb to nondetect in Wells MW-5 and MW-6, respectively, when the slow purge methodology is applied to sampling protocol. The decrease in lead using the slow purge methodology suggests that the elevated lead levels were the result of suspended solids and not impacted ground water. Lead levels have decreased in MW-1 to just over the GWQS for lead of 10 ppb (sample reported lead at 12.6 ppb).

4.3 Recommendations

BES recommends natural attenuation be considered as a mechanism for remediation and case closure at this site. Laboratory analytical data and site specific geologic and hydrogeologic conditions favor natural attenuation. Only one (1) well, MW-1, showed elevated levels of gasoline-related volatile organics. Abundant clay content in subsurface sediments, and the mounded water present within the former tank excavation, suggest a slow ground water flow rate at this site, which has been verified through evaluation of aquifer slug test data. The combination of a limited extent of impacted ground water, a slow migration rate, the presence of a low permeability soil type, the removal of the source, and the lack of receptors in the area suggest natural attenuation will be an effective option for this site.

Based on the benzene transport rate calculated above, an average benzene half-life of 200 days, and an initial benzene concentration of 350 ppb, dissolved benzene concentrations are expected to naturally degrade to 1.0 ppb within approximately 4.6 years and 9.3 feet downgradient of Well MW-1. A CEA designation is requested, using natural attenuation as the method of remediation, for a duration of five (5) years and 20 feet downgradient of Well MW-1, as depicted on Figure 6 - Classification Exception Area Designation Map.

Regarding the slightly elevated levels of lead detected in MW-1, BES is proposing that the CEA include the lead detected in this well. The level of lead present in MW-1 was just slightly over the GWQS for lead of 10 ppb (sample reported lead at 12.6 ppb). It is BES' opinion that the lead level in MW-1 should decrease further over time and that lead will not migrate beyond the proposed CEA boundary at a level over the GWQS.

A five (5) year CEA should allow for the variations in subsurface conditions, which affect the natural remediation process, and provide adequate time for natural remediation to occur. Completed CEA and Well Restriction Forms are attached in Exhibit VI.

A well search conducted by Vectre Corporation as part of the May 1994 RAW identified three (3) domestic wells, seven (7) industrial wells, one (1) potable well, six (6) piezometers, one (1) recovery well and 93 monitoring wells within a one (1) mile radius of the site. A canvass of the area did not reveal wells within 500 feet of the site. Basements were not identified within the immediate area of the site.

BES is proposing no additional sampling and analysis for the subject site. Based on the slow contaminant transport rate, lack of receptors in the area and lack of migration to date, BES is proposing implementation of the CEA for five (5) years. After five (5) years, the CEA can be removed with one (1) confirmation sample collected in the former excavation area.

COMPLIANCE
MANAGEMENT
INCORPORATED

February 11, 1997

Mr. William Brown
State of New Jersey
Department of Environmental Protection
Bureau of Underground Storage Tanks
CN 028
Trenton, NJ 08625

Re: Remedial Action Evaluation Report, February 1997
Allied Building Supply, 101 West Elizabeth Avenue
Linden, Union County, Case No. 93-06-24-1425

Dear Mr. Brown:

On December 18, 1996, representatives from Compliance Management Incorporated collected ground water samples from Monitoring Wells MW-1, MW-2, MW-5, and MW-6 located at the above-referenced site. A summary of the analytical results are attached along with the laboratory reduced deliverables package. Also, attached is a ground water contour map generated from data collected during this sampling event.

As you will note, the contaminants in the ground water are stable or decreasing. Based upon this data, we propose to submit to the Department, in the near future, a remedial action work plan addendum for no further action with the establishment of a classification exception area (CEA) for the contaminants remaining above the ground water quality criteria. As has been previously discussed with the Bureau of Underground Storage Tanks, the current owner of the property, New Jersey Transit (NJT) has expressed a willingness to accept such a finding for the property by the Department consistent with the terms of the contract of property sale between my client and NJT.

We believe that our intention to submit a proposal for no further action with a CEA is reasonable based upon the demonstrated removal of all sources of contamination from the site, the existence of a localized plume distribution, a low ground water seepage and contaminant migration velocities, and highly degradable plume concentrations. Furthermore, NJT has recently demolished the building and other improvement on the property and is in the process

364 PARSIPPANY ROAD
PARSIPPANY, NJ 07054
TEL 201-428-6050
FAX 201-428-6052

of constructing a parking structure on site. It is reasonable to assume that these demolition and construction activities, as well as future use pattern, may render the monitor wells damaged, useless or inaccessible by my client.

In the worst case, the presence of a large number of motor vehicles on site for construction and parking present a significant risk of a discharge of hazardous substances entering the monitor wells should they not be abandoned properly and in the near future. Our intended proposal for a finding of no further action with a classification exception area is consistent with the planned use of the property, the lack of receptors, and the chemical and physical characteristics described above.

We believe that we have met the threshold criteria for such a finding by the Department. We recognize that in order to make this determination, the Department will require the establishment of a CEA. Upon your concurrence, we will prepare the necessary documentation for your review in accordance with the Department's final guidance for CEAs.

It will take approximately 60 days from the date of your concurrence for our data collection, preparation, and submission of this additional documentation. Your expeditious response will allow us to proceed with this effort in a timely manner. Please advise accordingly.

If you have any questions, please contact either Mr. Karl Delaney at 609-268-8007 or myself at 201-428-6050.

Sincerely,

COMPLIANCE MANAGEMENT INC.

James Guider, P.E.

SCOPE OF WORK

Compliance Management Incorporated was retained by Selrite Millwork Corporation to prepare a Remedial Action Evaluation Report (RAER) for Allied Building Supply (Allied) in accordance with NJDEP letter, dated May 28, 1996 (Appendix III). The site is located at 101 West Elizabeth, Linden, Union County, NJ (Figures 1 & 2). This report discusses the remediation performed, ground water sampling, laboratory analysis and results. The two part certification is included in Appendix IV.

REMEDIAL ACTIVITIES

On November 18, 1996, monitoring well, MW-1 was purged for approximately 7 hours by utilizing a vacuum truck (vac truck). Approximately 700 gallons of ground water were removed from the well. The water was contained in a tanker compartment and transported to the S & M Waste Oil Facility for disposal as a petroleum mixture liquid, non-RCRA regulated waste. The load was assigned non-hazardous waste manifest # 5631 (Appendix II).

GROUND WATER SAMPLING

On December 18, 1996 four monitoring wells located on the subject property were sampled by CMI in accordance with the May 1992 NJDEP *Field Sampling Procedures Manual*. The samples were collected within two feet of the water level after purging the wells of three times the volume of the water column of each well. The monitoring well samples were collected with a decontaminated, dedicated Teflon bailer, then transferred to laboratory prepared containers suitable for volatile organic compounds and lead. Monitoring well data forms are included in Appendix I of this report.

Ground water samples were obtained from MW-1, MW-2, MW-5, and MW-6. A field blank was also collected as part of this sampling event, and a trip blank was provided by the laboratory. The samples were submitted to W.A.T.E.R Works Laboratory, New Jersey certification # 07673, for analysis. Samples were analyzed for benzene, toluene, ethylbenzene, total xylenes, and lead. Laboratory analytical results are included in Appendix V of this report and summarized in Table I below.

CASE # 93-06-24-1425

TABLE I
Ground Water Sampling Results
December 18, 1996
(results in $\mu g/\ell$)

Sample ID	Benzene	Toluene	Ethylbenzene	Total Xylenes	Lead
MW-1	ND (20)	3,500	2,200	8,000	0.12
MW-2	ND (1)	ND (2)	ND (1)	ND (2)	0.01
MW-5	ND (1)	ND (2)	ND (1)	ND (2)	0.16
MW-6	ND (1)	ND (2)	ND (1)	ND (2)	0.08
Field Blank	ND (1)	ND (2)	ND (1)	ND (2)	NS
Trip Blank	ND (1)	ND (2)	ND (1)	ND (2)	NS
NJDEP Standard	1	1,000	700	40	10

ND = Compound not detected
( ) = MDL, Method Detection Limit
$\mu g/\ell$ = micrograms per liter
NS = not sampled

Toluene, ethylbenzene, total xylenes, and lead were detected in MW-1. With the exception of lead, all of these compounds were above NJDEP criteria. Lead was also detected in MW-2, MW-5, and MW-6, but below the NJDEP criteria. No other target substances were found in any of the wells.

Benzene was not detected this sampling event. Toluene, total xylenes, and lead have all decreased in concentration since the last sampling event.

SITE HYDROLOGY

Depth to ground water ranged from 1.22 feet in MW-5 to 10.89 feet in MW-6. Ground water flow direction is toward the northeast as shown on the ground water contour map (Figure 3).

A small anomaly in flow direction is present at MW-5. This well is located within the

former tank excavation and shows an artificially elevated ground water level. We believe this is due to water perched within the former excavation. Monitoring well data are presented in Table II.

TABLE II
Monitoring Well Data
December 18, 1996
(results in feet)

	MW-1	MW-2	MW-3	MW-4	MW-5	MW-6
Casing Elevation	29.23	30.29	27.98	28.19	29.71	30.60
Well Depth	15.15	19.55	14.45	19.45	12.61	17.09
Depth to Ground Water	8.76	10.22	7.02	7.51	1.22	10.89
Product Thickness	0.0	0.0	0.0	0.0	0.0	0.0
Ground water Elevation	20.47	20.07	20.96	20.68	28.49	19.71

SUMMARY

Ground water sampling results showed gasoline related volatile organic compounds (BTEX) in only one of the four monitoring wells sampled. This concurred with previous sampling by others (Table III). This continues to demonstrate a highly localized contaminant plume. Benzene was not detected at this sampling event. Although ethylbenzene levels increased since the last sampling event, all other contaminants had decreased in MW-1. Monitoring well MW-1 is located on the immediate upgradient edge of the former tank excavation. Monitoring wells MW-2, MW-5, and MW-6, which are located downgradient to slightly side-gradient of the former UST excavation did not have any reportable levels of BTEX. Lead was found to be below the NJDEP criteria in all wells.

NA = data not available
ND = none detected above the method detection limit
NI = well was not yet installed
NS = not sampled
$\mu g/\ell$ = micrograms per liter

CONCLUSIONS/RECOMMENDATIONS

1. The sources of contamination, the leaking UST and surrounding soils, have been removed.
2. Concentrations of volatile organic compounds (BTEX) associated with gasoline are generally decreasing, most probably due to natural attenuation.
3. The plume of contamination has not spread to adjacent monitoring wells.
4. The utilization of the vac truck to purge MW-1 appears to have expedited the rate of decrease of the target compounds.
5. We recommend that natural attenuation be continued as the primary remedial measure.
6. We recommend that analysis for lead be removed from any future sampling events.

Case No. 93-06-24-1425

NJDEP
INDUSTRIAL SITE
EVALUATION ELEMENT
CN028
TRENTON, NJ
AUG 17 1998

Dear Sir:

Enclosed please find the results of laboratory analyses performed on groundwater samples collected from the monitoring wells located at the Allied Building Supply site on Elizabeth Avenue, Linden, NJ. Table 1 presents the field analyzed well parameters for each of the wells for the May, 1998 sampling episode. Table 2 presents the summary of the historical data for these wells.

The historical data indicates that the BTEX concentration at the source well, MW#1, is declining. Also, the data confirms that the contaminant plume has not migrated to the downgradient wells (MW#2 and MW#6). The analyses for lead at MW#1 has shown two excursions during the December, 1996 and May, 1998 sampling episodes. The sampling technique for the July, 1998 sampling episode was modified to use the trickle flow method. Using this sampling methodology, the lead content was measured to be only 6.18 µg/liter. Based on this result and the earlier historical analyses, the lead results measured during the December, 1996 and May, 1998 sampling episodes are believed to be due to the sampling methodology.

The owner of the property is interested in establishing a Classification Exception Area (CEA) for this site. If additional information is required, please advise. Thank you for your consideration.

Very truly yours,

J. David Calvert, PE, CSP

Re: Allied Building Supply
101 West Elizabeth Avenue
Linden, NJ
Case No. 93-06-24-1425

Dear Sir:

Presented herein is an application for a Classification Exception Area for the property located at 101 West Elizabeth Avenue, Linden, NJ. Attached are analytical data, calculations and drawings to support this application. These attachments include historical analytical data on the monitoring wells on this site, a drawing which displays the historical groundwater gradient on the site, and the results of the modeling calculations to predict the fate and transport of BTEX at this site. The data and modeling predict a very slow rate of transport of the contaminants and does not predict that potential receptors will be impacted.

This site had a discharge from an underground gasoline storage tank and/or piping prior to 1993. A total of six groundwater monitoring wells have been installed on or near this site as part of the site investigation. Through the eight rounds of sampling which has occurred over the past five years, only MW#1 has indicated contaminants at levels above the applicable Groundwater Quality Standards. Furthermore, the level of these contaminants have been significantly reduced over this period through natural processes.

It has been reported that a well search was previously performed in support of the management of this case and the results were submitted to the NJDEP. This well search indicated no downgradient wells to be within ¼ miles of the site.

The direction of groundwater flow is indicated to be toward the east. The closest potential receptor in this direction is the storm sewer collection system which is located in the parking lot for the Linden Rail Station. This system is approximately 75 feet from the property line of this site.

The native soils at this site are have been characterized as a silty clay during well installations. Based on this characterization, the hydraulic conductivity at this site has been estimated to be approximately 3E-3 ft/day. Groundwater elevations have been measured in the various monitoring wells during each sampling episode. These data indicate that the groundwater gradient is approximately 0.005 ft/ft (See Figure 1). The porosity of the silty clay soils has been estimated to be <0.5. Based on the foregoing data, the actual groundwater flow rate is calculated to be 3E-5 ft/day. At this flow rate, the plume is predicted to be essentially stagnant. Even using other more conservative assumptions, the maximum distance for the migration of the BTEX plume is predicted to be less than 15 feet from the source located at or near MW#1. Therefore, the plume is predicted not to impact receptors and is predicted not to travel beyond the limits of the property boundary.

Based on these analyses, a Classification Exception Area is proposed for this site to the limits of the property boundaries.

Thank you for your consideration. If you have any questions on this matter, please contact me at your convenience.

Very truly yours,

J. David Calvert, PE, CSP

Data for sampling rounds from December , 1993 to December, 1996 based on data presented by Compliance Management Inc.
Sampling for lead analysis in July, 1998 accomplished by trickle flow.
Lead analyses for May, 1998 and December, 1996 presumed to be due to particulate contamination.
Lead data presented by Compliance Management Inc. may not be accurate based on NJDEP comments in letter dated March 26, 1997.

Linden, Union County
Case #93-06-24-1425
UST #0129486
KCSL # NJL600081798
Closure #C93-2092

NOV 16 1998

Dear Mr. Winters:

Pursuant to N.J.S.A. 58:10B-13.1 and N.J.A.C. 7:26C, the New Jersey Department of Environmental Protection (Department) makes a determination that no further action is necessary for the remediation of the area of concern as specifically referenced above, except as noted below, so long as Allied Building Supplies did not withhold any information from the Department. This action is based upon information in the Department's case file and Allied Building Supplies' final certified report dated August 26, 1998. In issuing this No Further Action Determination and Covenant Not to Sue, the Department has relied upon the certified representations and information provided to the Department.

By issuance of this No Further Action Determination, the Department acknowledges the completion of a Remedial Investigation and Remedial Action pursuant to the Technical Requirements for Site Remediation (N.J.A.C. 7:26E) for the 2,000 gallon Gasoline Underground Storage Tank and no other areas.

NO FURTHER ACTION CONDITIONS

As a condition of this No Further Action Determination Allied Building Supplies as well as each subsequent owner, lessee and operator (collectively "Successors") shall comply with each of the following:

Name and Address Changes

Pursuant to N.J.S.A. 58:10B-12, Allied Building Supplies and the Successors shall inform the Department in writing whenever its name or address changes, within 14 calendar days after the change.

Well Sealing

Pursuant to N.J.S.A. 58:4A, Allied Building Supplies and the Successors shall properly seal all monitoring wells installed as part of a remediation that will no longer be used for ground water monitoring. A certified and licensed well driller shall seal the wells in accordance with the requirements of N.J.A.C. 7:9-9. The well abandonment forms shall be completed and submitted to the Bureau of Water Allocation. Please call (609) 984-6831 for forms and information.

Monitoring of Compliance

Pursuant to N.J.S.A. 58:10B-13.1, Allied Building Supplies and the Successors shall conduct monitoring for compliance and effectiveness of the institutional control specified in this document and submit a certification to the Department biennially in writing that the institutional control is being properly maintained and continues to be protective of public health and safety and the environment. Any such certification shall include the information relied upon to determine that no changes have occurred.

CLASSIFICATION EXCEPTION AREA (CEA)
AND WELL RESTRICTION AREA (WRA)

Because concentrations of contaminants remain above the Ground Water Quality Standards, N.J.A.C. 7:9-6 et seq., a CEA and WRA are required, at this time, as institutional controls.

This CEA and WRA are based, in part, on the aquifer and contaminant data and evaluations provided in the above referenced report and/or case file. The CEA and WRA is the area defined by the property boundary and identified on the enclosed map. Any special conditions or restrictions for water use within the WRA will be administered by the Department's Bureau of Water Allocation.

This CEA and WRA apply to benzene, toluene, ethylbenzene and xylenes only. All other constituent standards apply within the CEA. All constituent standards (N.J.A.C. 7:9-6) apply at the designated boundary. All designated ground water uses within this area are suspended for the duration of the CEA. Pursuant to N.J.A.C. 7:9-6.4, "designated use" means a present or potential use of ground water within a ground water classification area as determined by N.J.A.C. 7:9-6.5. Pursuant to N.J.A.C. 7:9-6.5, this area is presently designated as Class II-A. The primary designated use for Class II-A ground water is potable water; secondary uses include agricultural and industrial water.

The duration of the CEA and WRA is set at three years from the date of this letter. This is greater than the predicted duration for contaminant degradation in the above referenced report. The Ground Water Quality Standards that apply to the compounds of concern are: benzene 1 ppb; toluene 1000 ppb; ethylbenzene 700 ppb and xylenes 1000 ppb. Should concentrations of contaminants reach their respective criteria prior to the CEA and WRA expiration date as demonstrated through ground water sampling, the Department will consider any requests to terminate the CEA and WRA. However, the expiration of the three year period prior to contaminant concentrations reaching the Ground Water Quality Standards would not constitute approval to utilize the ground water for its designated purposes. Compliance with the Ground Water Quality Standards may be determined by Allied Building Supplies by demonstrating that the Ground Water Quality Standards have been met for the referenced constituent(s) through ground water sampling from monitoring well: MW-1. Please note that Allied Building Supplies has the option of maintaining these wells for sampling purposes or sealing these wells and utilizing an acceptable method of ground water sampling to demonstrate compliance with the Ground Water Quality Standards. Compliance may be determined by Allied Building Supplies at the termination of the CEA and WRA or sooner The Department's evaluation of the ground water sampling results, to determine compliance with the Ground Water Quality Standards, would be through a Memorandum of Agreement (MOA) or other oversight document, executed between Allied Building Supplies and the Department.

COVENANT NOT TO SUE

The Department issues this Covenant Not to Sue pursuant to N.J.S.A. 58:10B-13.1. That statute requires a covenant not to sue with each no further action letter. However, in accordance with N.J.S.A. 58:10B-13.1, nothing in this Covenant shall benefit any person who is liable, pursuant to the Spill Compensation and Control Act (Spill Act), N.J.S.A. 58:10-23.11, for cleanup and removal costs and the Department makes no representation by the issuance of this Covenant, either express or implied, as to the Spill Act liability of any person.

The Department covenants, except as provided in the preceding paragraph, that it will not bring any civil action against the following:

(a) the person who undertook the remediation;
(b) subsequent owners of the subject property;
(c) subsequent lessees of the subject property; and
(d) subsequent operators at the subject property,

for the purposes of requiring remediation to address contamination which existed prior to the date of the final certified report for the area of concern specifically referenced above, or payment of cleanup and removal costs for such additional remediation.

Any person who may benefit from this Covenant is barred from making a claim against the Spill Compensation Fund, N.J.S.A. 58:10-23.11i, and the Sanitary Landfill Facility Contingency Fund, N.J.S.A. 13:1E-105, for any costs or damages relating to the remediation covered by this Covenant. All other claims against these funds will be controlled by the corresponding statutes and their implementing regulations.

Allied Building Supplies, and each subsequent owner, lessee and operator, during that person's ownership, tenancy or operation, shall maintain those controls and conduct periodic compliance monitoring in the manner the Department requires.

Pursuant to N.J.S.A. 58:10B-13.1d, this Covenant does not relieve any person from the obligation to comply in the future with laws and regulations. The Department reserves its right to take all appropriate enforcement for any failure to do so.

The Department may revoke this Covenant at any time after providing notice upon its determination that either:

(a) any person with the legal obligation to comply with any condition in this No Further Action Letter has failed to do so; or
(b) any person with the legal obligation to maintain or monitor any engineering or institutional control has failed to do so.

This Covenant Not to Sue, which the Department has executed in duplicate, shall take effect immediately once the person who undertook the remediation has signed and dated the Covenant Not to Sue in the lines supplied below and the Department has received one copy of this document with original signatures of the Department and the person who undertook the remediation.

NOTICES

Bureau of Field Operation's Case Assignment

This No Further Action Determination specifically does not address the 550 gallon fuel oil underground storage tank. Allied Building Supply was notified of the case transfer to the Bureau of Field Operation's Case Assignment Section by letter on December 8, 1994.

Pursuant to the Procedures for Department Oversight of the Remediation of Contaminated Sites (N.J.A.C. 7:26C) you may have an opportunity to remediate the site, or portion of the site, on a voluntary basis under a Memorandum of Agreement (application enclosed) or otherwise. Please direct all correspondence to:

New Jersey Department of Environmental Protection
Bureau of Field Operations
Case Assignment Section
Attention: Section Chief
401 East State Street - 5th Floor
P.O. Box 434
Trenton, NJ 08625-0434

Direct Billing

Please be advised that pursuant to the Procedures for Department Oversight of the Remediation of Contaminated Sites (N.J.A.C. 7:26C et seq.) Allied Building Supplies is required to reimburse the Department for oversight of the remediation. The Department will be issuing a bill within the next four months.

Thank you for your attention to these matters. If you have any questions, please contact Bill Brown, Case Manager at (609) 777-1386.

Sincerely,

Kevin F. Kratina, Chief

Annual Certification Questionnaire

Compliance with this Annual Certification will meet all requirements of State Law P.L. 1986, c. 102, The Underground Storage of Hazardous Substances Act (N.J.S.A. 58:10A-21) and the Underground Storage Tank Regulations (N.J.A.C. 7:14B-1 through 15).

IMPORTANT INFORMATION

FEE: The Fee Schedule is printed on the reverse side of the billing invoice. Please make your payment instrument payble to: "Treasurer", State of New Jersey. Use of the enclosed return envelope will expedite processing.

PENALTY: Failure by onwer or operator of a regulated underground storage tank to comply with any requirement of the State UST Act or regulations may result in the penalties set forth in N.J..S.A. 58:10A-10.

EMERGENCY: If a discharge or spill occurs, the NJDEPE Hotline at (609) 292-7172 must be called IMMEDIATELY - 24 hours a day.

UPGRADE EXEMPTION: Residential heating oil underground storage tanks are exempt from all upgrade requirements.

DATES TO KNOW (critical deadlines)

December 22, 1989 - All federally regulated tank systems installed before 1965 (or of unknown age) must have installed leak detection.
December 22, 1990 - All federally regulated tank systems installed between 1965-1969 must have installed leak detection.
December 22, 1991 - All federally regulated tank systems installed between 1969-1974 must have installed leak detection.
December 22, 1992 - All federallly regulated tank systems installed between 1974-1979 must have installed leak detection.
December 22, 1993 - All regulated tanks must install cathodic protection, monitoring systems and, spill/overfill protection (non-residential heating oil tanks exluded).
August 6, 1994 - All non-residential heating oil tanks installed prior to August 6, 1974 must install cathodic protection, monitoring systems, and spill/overfill protection.
August 6, 1995 - All non-residential heating oil tanks installed on or after August 6, 1974 must install cathodic protection, monitoring systems, and spill/overfill protection.
December 22, 1998 - All regulated hazardous waste substance systems must have secondary containment (petroleum products and waste oil tank systems excluded).

SECTION A — REGISTRATION & BILLING

Have there been any changes to this facility's registration status during the last twelve months that have not been reported to this office? * ☐ YES ☐ NO

If YES, please check the appropriate type of change(s) below and complete the enclosed REGISTRATION QUESTIONNAIRE (black bar on face of the form) with NEW information ONLY. Then, complese the remainder of this form and submit to this office.

_____ Company Name and Address
_____ Facility Location
_____ Operator
_____ Contact Person
_____ Type of Product(s) Stored
_____ Spills, accidents, leaks or releases
_____ Substantial Modificattion(s)

PLEASE USE REGISTRATION FORM WITH BLACK BAR AT THE TOP FOR REPORTING THIS INFORMATION

* TANKS WERE REMOVED IN ACCORDANCE WITH AN UNDERGROUND STORAGE TANK CLOSURE PLAN DATED MAY 1993

X Other (please specify) Tanks Removed, Property Sold

If NO, please complete the remainder of this form and return to this office.

SECTION B — MONITORING SYSTEMS

N/A

1. Does this facility have a secondary containment system which was installed before the effective date of the UST Technical regulations? ☐ YES ☐ NO
   If Yes, does the secondary containment system comply with all provisions of these regulations? ☐ YES ☐ NO
2. Does this facility have a monitoring system which is in compliance with N.J.A.C. 7:14B-4.5(e) (for systems installed prior to the effective date of these regulations) or N.J.A.C. 7:14B-6 (for systems installed after the effective date of these regulations)? ☐ YES ☐ NO
   If No, please be aware that the facility must meet the appropriate deadline. (See Dates to Know at top of this page).
3. Does this facility have an UST system installed prior to 1965 or of unknown age? ☐ YES ☐ NO
   If Yes, has the facility installed a leak detection system that complies with all provisions of the Federal UST Technical Regulations 40 CFR 280.40? ☐ YES ☐ NO
   If No, were the closure procedures completed as required by the Federal UST Technical Regulations 40 CFR 280.71, 72? ☐ YES ☐ NO

N/A

SECTION C

RECORDKEEPING/COMPLIANCE

Please answer all the questions in this Section on a facility basis. Any one tank not in compliance requires a "NO" answer for the entire facility.

1. Does this facility have cathodic protection systems? ☐ YES ☐ NO
   If Yes, are the systems properly operated and maintained as required by the UST Technical Regulations Subchapter 6? ☐ YES ☐ NO
2. Are the performance claims and documentation of monitoring systems maintained by the owner or operator as required by Subchapter 6.6? ☐ YES ☐ NO
3. Are the proper monitoring, testing, sampling, repair and inventory records kept on-site as required by Subchapter 6.6? ☐ YES ☐ NO
4. Is the proper Release Response Plan kept on-site per Subchapter 5.5? ☐ YES ☐ NO
5. Does the facility have spill and overfill protection systems per Subchapter 5.2(a) (5)? ☐ YES ☐ NO
   If yes, are they properly operated and maintained as required by the UST Technical Regulations? ☐ YES ☐ NO
6. Have all Fill Ports been permanently marked as per API #1637 as stated in Subchapter 4.5(h)? ☐ YES ☐ NO

SECTION D N/A

FINANCIAL RESPONSIBILITY

All facilities are required to obtain financial responsibility assurance by the deadlines listed in Subchapter 14. Please list the appropriate financial information below:

_____ Type

_____ Carrier/Issuing agency

___/___/___ Date Effective

_____ Policy Number

$_____ Amount

CERTIFICATIONS

Who must sign?

CERTIFICATION NO. 1:

Must be signed by the highest ranking individual at the facility with overall responsibility

CERTIFICATION NO. 2:

Must be signed as follows
: For corporations, by the vice president or higher
: For sole proprietorships, by the proprietor
: For partnerships, by the general partner
: For government or public agency, by the principal executive officer or ranking official

NOTE: IF THE PERSON SIGNING CERTIFICATION No. 2 IS THE SAME AS THE PERSON SIGNING CERTIFICATION No. 1, THEN CERTIFICATION No. 1 ONLY NEEDS TO BE SIGNED. (If different persons are required to sign No. 1 and No. 2, then they must do so.)

No. 1

"I certify under penalty of law that the information provided in this document is true, accurate and complete. I am aware that there are significant civil and criminal penalties for submitting false, inaccurate or incomplete information, including fines and/or imprisonment."

*** ANNUAL CERTIFICATION ***

UNDERGROUND STORAGE TANK REGISTRATION QUESTIONNAIRE

Bureau of Applicability and Compliance
Registration and Billing Section

Use this form ONLY when submitting corrections/changes to registration at Annual Certification

General Facility Information

1. Facility Name: Allied Building Supply Co.
2. Facility Location: 1011 West Elizabeth Ave. (NUMBER AND STREET)
   Linden (CITY OR MUNICIPALITY)
   Union (COUNTY) NJ (STATE) 07036 (ZIP CODE)
   Block 99254 Lot 00110
3. Owner's mailing address: P.O. Box 13817 (NUMBER AND STREET)
   Union (CITY OR MUNICIPALITY)
   Union (COUNTY) NJ (STATE) 07083 (ZIP CODE)
4. Owner's name: Daniel Winters
5. Contact person (Facility Operator): Daniel Winters (PERSON OR TITLE)
6. Contact telephone number: 908 964 1515 (AREA CODE / CHANGE / NUMBER)
7. Total number of facility underground storage tanks: 0 (Complete Questions 12 thru 32 for each tank)
8. Total facility underground storage tank capacity (gallons): ☐☐☐☐☐☐
9. Status of owner: (mark one) A. ☐ CURRENT B. ☒ FORMER
10. Type of owner (mark one) A. ☐ State B. ☒ Commercial C. ☐ Local D. ☐ Federal E. ☐ Charitable or Public School F. ☐ Residence G. ☐ Ownership Uncertain
11a. Two copies of a site plan are submitted with this registration A. ☐ YES B. ☐ NO N/A

Submit two (2) copies of SITE PLAN showing facility or property boundary, buildings and the location of ALL underground storage tanks. EITHER, an existing engineering site plan, if available, OR a neat and legible hand-drawn sketch of the site may be submitted. In either case the site plan or sketch MUST show the location and distances that tanks, buildings, and dispensers are from the facility's property boundary. Include all tanks that are: E (existing/in use), P (empty), M (emergency), A (abandoned), C (other). Each underground tank on the site plan or sketch shall be numbered in accordance with the instructions for question 12. The number assigned to a tank on the site plan or sketch MUST match and be identical to the tank identification number assigned to that tank on this form.

INCLUDE FACILITY NAME, OWNER'S NAME, FACILITY ADDRESS AND TELEPHONE NUMBER ON ALL SITE PLANS.

11b. Do you have financial responsibility assurance? ☐ YES ☐ NO N/A

_____ (Type) _____ (Company/Carrier)

_____ (Policy Number) _____ (Expiration Date)

UST NO. 0129486.

ALL underground tanks, including those taken out of operation (UNLESS THE TANK WAS REMOVED FROM THE GROUND) must be included in this registration. All in-ground tanks shall be reported as underground tanks on this questionnaire regardless of their current status; Existing, E; Empty, P; Emergency, M; Abandoned, A; or Other, C.

SPECIFIC TANK INFORMATION

	TANK NO.	TANK NO.	TANK NO.	TANK NO.	TANK NO.
12. Tank Identification number

Annual Certification Questionnaire

Compliance with this Annual Certification will meet all requirements of State Law P.L. 1986, c. 102, The Underground Storage of Hazardous Substances Act (N.J.S.A. 58:10A-21) and the Underground Storage Tank Regulations (N.J.A.C. 7:14B-1 through 15).

IMPORTANT INFORMATION

FEE: The Fee Schedule is printed on the reverse side of the billing invoice. Please make your payment instrument payble to: "Treasurer", State of New Jersey. Use of the enclosed return envelope will expedite processing.

PENALTY: Failure by onwer or operator of a regulated underground storage tank to comply with any requirement of the State UST Act or regulations may result in the penalties set forth in N.J..S.A. 58:10A-10.

EMERGENCY: If a discharge or spill occurs, the NJDEPE Hotline at (609) 292-7172 must be called IMMEDIATELY - 24 hours a day.

UPGRADE EXEMPTION: Residential heating oil underground storage tanks are exempt from all upgrade requirements.

DATES TO KNOW (critical deadlines)

December 22, 1989 - All federally regulated tank systems installed before 1965 (or of unknown age) must have installed leak detection.
December 22, 1990 - All federally regulated tank systems installed between 1965-1969 must have installed leak detection.
December 22, 1991 - All federally regulated tank systems installed between 1969-1974 must have installed leak detection.
December 22, 1992 - All federallly regulated tank systems installed between 1974-1979 must have installed leak detection.
December 22, 1993 - All regulated tanks must install cathodic protection, monitoring systems and, spill/overfill protection (non-residential heating oil tanks exluded).
August 6, 1994 - All non-residential heating oil tanks installed prior to August 6, 1974 must install cathodic protection, monitoring systems, and spill/overfill protection.
August 6, 1995 - All non-residential heating oil tanks installed on or after August 6, 1974 must install cathodic protection, monitoring systems, and spill/overfill protection.
December 22, 1998 - All regulated hazardous waste substance systems must have secondary containment (petroleum products and waste oil tank systems excluded).

SECTION A

REGISTRATION & BILLING

Have there been any changes to this facility's registration status during the last twelve months that have not been reported to this office?
☐ YES ☑ NO

If YES, please check the appropriate type of change(s) below and complete the enclosed REGISTRATION QUESTIONNAIRE (black bar on face of the form) with NEW information ONLY. Then, complete the remainder of this form and submit to this office.

_____ Company Name and Address
_____ Facility Location
_____ Operator
_____ Contact Person
_____ Type of Product(s) Stored
_____ Spills, accidents, leaks or releases
_____ Substantial Modificattion(s)
_____ Other (please specify)

PLEASE USE REGISTRATION FORM WITH BLACK BAR AT THE TOP FOR REPORTING THIS INFORMATION

If NO, please complete the remainder of this form and return to this office.

SECTION B

MONITORING SYSTEMS

1. Does this facility have a secondary containment system which was installed before the effective date of the UST Technical regulations?
☐ YES ☑ NO
If Yes, does the secondary containment system comply with all provisions of these regulations?
☐ YES ☐ NO
2. Does this facility have a monitoring system which is in compliance with N.J.A.C. 7:14B-4.5(e) (for systems installed prior to the effective date of these regulations) or N.J.A.C. 7:14B-6 (for systems installed after the effective date of these regulations)?
☐ YES ☑ NO
If No, please be aware that the facility must meet the appropriate deadline. (See Dates to Know at top of this page).
3. Does this facility have an UST system installed prior to 1965 or of unknown age? ☐ YES ☑ NO
If Yes, has the facility installed a leak detection system that complies with all provisions of the Federal UST Technical Regulations 40 CFR 280.40? ☐ YES ☐ NO
If No, were the closure procedures completed as required by the Federal UST Technical Regulations 40 CFR 280.71, 72? ☐ YES ☑ NO

SECTION C

RECORDKEEPING/COMPLIANCE

Please answer all the questions in this Section on a facility basis. Any one tank not in compliance requires a "NO" answer for the entire facility.

1. Does this facility have cathodic protection systems? ☐ YES ☑ NO
   If Yes, are the systems properly operated and maintained as required by the UST Technical Regulations Subchapter 6? ☐ YES ☐ NO
2. Are the performance claims and documentation of monitoring systems maintained by the owner or operator as required by Subchapter 6.6? ☐ YES ☑ NO
3. Are the proper monitoring, testing, sampling, repair and inventory records kept on-site as required by Subchapter 6.6? ☐ YES ☑ NO
4. Is the proper Release Response Plan kept on-site per Subchapter 5.5? ☐ YES ☑ NO
5. Does the facility have spill and overfill protection systems per Subchapter 5.2(a) (5)? ☐ YES ☑ NO
   If yes, are they properly operated and maintained as required by the UST Technical Regulations? ☐ YES ☑ NO
6. Have all Fill Ports been permanently marked as per API #1637 as stated in Subchapter 4.5(h)? ☐ YES ☑ NO

SECTION D

FINANCIAL RESPONSIBILITY

All facilities are required to obtain financial responsibility assurance by the deadlines listed in Subchapter 14. Please list the appropriate financial information below:

Liability — Type

Loyal Insurance / Brovell, Farmer, Walker & Kino Agency — Carrier/Issuing agency

9, 4, 92 — Date Effective

N-SP-214064-000 — Policy Number

$ _____ — Amount

CERTIFICATIONS

Who must sign?

CERTIFICATION NO. 1:

Must be signed by the highest ranking individual at the facility with overall responsibility

CERTIFICATION NO. 2:

Must be signed as follows
: For corporations, by the vice president or higher
: For sole proprietorships, by the proprietor
: For partnerships, by the general partner
: For government or public agency, by the principal executive officer or ranking official

NOTE: IF THE PERSON SIGNING CERTIFICATION No. 2 IS THE SAME AS THE PERSON SIGNING CERTIFICATION No. 1, THEN CERTIFICATION No. 1 ONLY NEEDS TO BE SIGNED. (If different persons are required to sign No. 1 and No. 2, then they must do so.)

UNDERGROUND STORAGE TANK REGISTRATION QUESTIONNAIRE

Bureau of Applicability and Compliance
Registration and Billing Section
1-800-722-TANK

Use this form ONLY when submitting corrections/changes to registration at Annual Certification

General Facility Information

1. Facility Name: ALLIED BUILDING SUPPLY CO
2. Facility Location: 1011 WEST ELIZABETH AVE. (NUMBER AND STREET)
   LINDEN (CITY OR MUNICIPALITY)
   UNION (COUNTY) NJ (STATE) 07036 (ZIP CODE)
   00254 (BLOCK) 0010 (LOT)
3. Owner's mailing address: P.O. BOX 3817 (NUMBER AND STREET)
   UNION (CITY OR MUNICIPALITY)
   UNION (COUNTY) NJ (STATE) 070833817 (ZIP CODE)
4. Owner's name: DANIEL WINTERS
5. Contact person (Facility Operator): AL FIORE (PERSON OR TITLE)
6. Contact telephone number: 908 (AREA CODE) 964 (CHANGE) 1555 (NUMBER)
7. Total number of facility underground storage tanks: 0001 (Complete Questions 12 thru 32 for each tank)
8. Total facility underground storage tank capacity (gallons): 000200
9. Status of owner: (mark one) A. ☒ CURRENT B. ☐ FORMER
10. Type of owner (mark one) A. ☐ State B. ☒ Commercial C. ☐ Local D. ☐ Federal E. ☐ Charitable or Public School F. ☐ Residence G. ☐ Ownership Uncertain
11a. Two copies of a site plan are submitted with this registration A. ☒ YES B. ☐ NO

Submit two (2) copies of SITE PLAN showing facility or property boundary, buildings and the location of ALL underground storage tanks. EITHER, an existing engineering site plan, if available, OR a neat and legible hand-drawn sketch of the site may be submitted. In either case the site plan or sketch MUST show the location and distances that tanks, buildings, and dispensers are from the facility's property boundary. Include all tanks that are: E (existing/in use), P (empty), M (emergency), A (abandoned), C (other). Each underground tank on the site plan or sketch shall be numbered in accordance with the instructions for question 12. The number assigned to a tank on the site plan or sketch MUST match and be identical to the tank identification number assigned to that tank on this form.

INCLUDE FACILITY NAME, OWNER'S NAME, FACILITY ADDRESS AND TELEPHONE NUMBER ON ALL SITE PLANS.

11b. Do you have financial responsibility assurance? ☒ YES ☐ NO

Liability (Type)
Royal INS. (Company/Carrier)
N-SP-214064-000 (Policy Number)
5/4/92 (Expiration Date)

UST NO. 0129486

ALL underground tanks, including those taken out of operation (UNLESS THE TANK WAS REMOVED FROM THE GROUND) must be included in this registration. All in-ground tanks shall be reported as underground tanks on this questionnaire regardless of their current status; Existing, E; Empty, P; Emergency, M; Abandoned, A; or Other, C.

Annual Certification Questionnaire

Compliance with this Annual Certification will meet all requirements of State Law P.L. 1986, c. 102, The Underground Storage of Hazardous Substances Act (N.J.S.A. 58:10A-21) and the Underground Storage Tank Regulations (N.J.A.C. 7:14B-1 through 15).

IMPORTANT INFORMATION

FEE: The Fee Schedule is printed on the reverse side of the billing invoice. Please make your payment instrument payble to: "Treasurer", State of New Jersey. Use of the enclosed return envelope will expedite processing.

PENALTY: Failure by onwer or operator of a regulated underground storage tank to comply with any requirement of the State UST Act or regulations may result in the penalties set forth in N.J..S.A. 58:10A-10.

EMERGENCY: If a discharge or spill occurs, the NJDEPE Hotline at (609) 292-7172 must be called IMMEDIATELY - 24 hours a day.

UPGRADE EXEMPTION: Residential heating oil underground storage tanks are exempt from all upgrade requirements.

DATES TO KNOW (critical deadlines)

December 22, 1989 - All federally regulated tank systems installed before 1965 (or of unknown age) must have installed leak detection.
December 22, 1990 - All federally regulated tank systems installed between 1965-1969 must have installed leak detection.
December 22, 1991 - All federally regulated tank systems installed between 1969-1974 must have installed leak detection.
December 22, 1992 - All federallly regulated tank systems installed between 1974-1979 must have installed leak detection.
December 22, 1993 - All regulated tanks must install cathodic protection, monitoring systems and, spill/overfill protection (non-residential heating oil tanks exluded).
August 6, 1994 - All non-residential heating oil tanks installed prior to August 6, 1974 must install cathodic protection, monitoring systems, and spill/overfill protection.
August 6, 1995 - All non-residential heating oil tanks installed on or after August 6, 1974 must install cathodic protection, monitoring systems, and spill/overfill protection.
December 22, 1998 - All regulated hazardous waste substance systems must have secondary containment (petroleum products and waste oil tank systems excluded).

SECTION A — REGISTRATION & BILLING

Have there been any changes to this facility's registration status during the last twelve months that have not been reported to this office?

☐ YES ☒ NO

If YES, please check the appropriate type of change(s) below and complete the enclosed REGISTRATION QUESTIONNAIRE (black bar on face of the form) with NEW information ONLY. Then, complete the remainder of this form and submit to this office.

_____ Company Name and Address
_____ Facility Location
_____ Operator
_____ Contact Person
_____ Type of Product(s) Stored
_____ Spills, accidents, leaks or releases
_____ Substantial Modificattion(s)
_____ Other (please specify)

PLEASE USE REGISTRATION FORM WITH BLACK BAR AT THE TOP FOR REPORTING THIS INFORMATION

If NO, please complete the remainder of this form and return to this office.

SECTION B — MONITORING SYSTEMS

1. Does this facility have a secondary containment system which was installed before the effective date of the UST Technical regulations?

☐ YES ☒ NO

If Yes, does the secondary containment system comply with all provisions of these regulations?

☐ YES ☐ NO

2. Does this facility have a monitoring system which is in compliance with N.J.A.C. 7:14B-4.5(c) (for systems installed prior to the effective date of these regulations) or N.J.A.C. 7:14B-6 (for systems installed after the effective date of these regulations)?

☐ YES ☒ NO

If No, please be aware that the facility must meet the appropriate deadline. (See Dates to Know at top of this page).

3. Does this facility have an UST system installed prior to 1965 or of unknown age? ☐ YES ☒ NO

If Yes, has the facility installed a leak detection system that complies with all provisions of the Federal UST Technical Regulations 40 CFR 280.40? ☐ YES ☐ NO

If No, were the closure procedures completed as required by the Federal UST Technical Regulations 40 CFR 280.71, 72? ☐ YES ☒ NO

SECTION C

RECORDKEEPING/COMPLIANCE

Please answer all the questions in this Section on a facility basis. Any one tank not in compliance requires a "NO" answer for the entire facility.

1. Does this facility have cathodic protection systems? ☐ YES ☑ NO
   If Yes, are the systems properly operated and maintained as required by the UST Technical Regulations Subchapter 6? ☐ YES ☐ NO
2. Are the performance claims and documentation of monitoring systems maintained by the owner or operator as required by Subchapter 6.6? ☐ YES ☑ NO
3. Are the proper monitoring, testing, sampling, repair and inventory records kept on-site as required by Subchapter 6.6? ☐ YES ☑ NO
4. Is the proper Release Response Plan kept on-site per Subchapter 5.5? ☐ YES ☑ NO
5. Does the facility have spill and overfill protection systems per Subchapter 5.2(a) (5)? ☐ YES ☑ NO
   If yes, are they properly operated and maintained as required by the UST Technical Regulations? ☐ YES ☑ NO
6. Have all Fill Ports been permanently marked as per API #1637 as stated in Subchapter 4.5(h)? ☐ YES ☑ NO

SECTION D

FINANCIAL RESPONSIBILITY

All facilities are required to obtain financial responsibility assurance by the deadlines listed in Subchapter 14. Please list the appropriate financial information below:

Liability — Type

Royal Insurance / Brownell, Kramon, Waldron & Co. Agency — Carrier/Issuing agency

9, 4, 91 — Date Effective

N-SP-214064-0U5 — Policy Number

$ _____ — Amount

CERTIFICATIONS

Who must sign?

CERTIFICATION NO. 1:

Must be signed by the highest ranking individual at the facility with overall responsibility

CERTIFICATION NO. 2:

Must be signed as follows
- : For corporations, by the vice president or higher
- : For sole proprietorships, by the proprietor
- : For partnerships, by the general partner
- : For government or public agency, by the principal executive officer or ranking official

NOTE: IF THE PERSON SIGNING CERTIFICATION No. 2 IS THE SAME AS THE PERSON SIGNING CERTIFICATION No. 1, THEN CERTIFICATION No. 1 ONLY NEEDS TO BE SIGNED. (If different persons are required to sign No. 1 and No. 2, then they must do so.)

No. 1

"I certify under penalty of law that the information provided in this document is true, accurate and complete. I am aware that there are significant civil and criminal penalties for submitting false, incaccurate or incomplete information, including fines and/or imprisonment."

Annual Certification Questionnaire

Compliance with this Annual Certification will meet all requirements of State Law P.L. 1986, c. 102, The Underground Storage of Hazardous Substances Act (N.J.S.A. 58:10A-21) and The Underground Storage Tank Regulations (N.J.A.C. 7:14B-1 through 15).

IMPORTANT INFORMATION

FEE	The Fee Schedule is printed on the reverse side of the billing invoice. Please make your payment instrument payable to: "Treasurer", State of New Jersey. Use of the enclosed return envelope will expedite processing of your certification.
PENALTY	Failure by owner or operator of a regulated underground storage tank to comply with any requirement of the State UST Act of regulations may result in the penalties set forth in N.J.S.A. 58:10A-10.
EMERGENCY	If a discharge or spill occurs, the NJDEP Hotline at (609) 292-7172 must be called IMMEDIATELY - 24 hours a day.

DATES TO KNOW (critical deadlines)

December 22, 1989 -	All tank systems installed before 1965 (or of unknown age) must have installed leak detection (federally regulated tanks only).
December 22, 1990 -	All tank systems installed between 1965-1969 must have leak detection (federally regulated tanks only).
December 22, 1990 -	All pressure piping must have line leak detection and have done a precision test if tank system lacks a monitoring system (federally regulated tanks only).
September 3, 1991 -	All regulated tanks must install cathodic protection, monitoring systems, and spill/overfill protection (except residential heating oil).
December 22, 1993 -	All agricultural tanks installed before September 3, 1986 must install cathodic protection, monitoring systems, and spill/overfill protection.
December 22, 1998 -	All regulated hazardous waste substance systems must have secondary containment (petroleum products and waste oil tank systems excluded).

SECTION A

REGISTRATION & BILLING

Have there been any changes to this facility's registration status during the last twelve months that have not been reported to this office?
☒ YES ☐ NO

If YES, please check the appropriate type of change(s) below and complete the enclosed REGISTRATION QUESTIONNAIRE (black bar on face of the form) with NEW information ONLY. Then, complete the remainder of this form and submit to this office.

_____ Company Name and Address
_____ Facility Location
_____ Operator
✓ Contact Person
_____ Type of Product(s) Stored
_____ Spills, accidents, leaks or releases
_____ Substantial Modificattion(s)
✓ Other (please specify)
Owner Address

PLEASE USE REGISTRATION FORM WITH BLACK BAR AT THE TOP FOR REPORTING THIS INFORMATION

If NO, please complete the remainder of this form and return to this office.

SECTION B

MONITORING SYSTEMS

1. Does this facility have a secondary containment system which was installed before the effective date of the UST Technical regulations?
☐ YES ☒ NO
If Yes, does the secondary containment system comply with all provisions of these regulations?
☐ YES ☐ NO
2. Does this facility have a monitoring system which is in compliance with N.J.A.C. 7:14B-4.5(e) (for systems installed prior to the effective date of these regulations) or N.J.A.C. 7:14B-6 (for systems installed after the effective date of these regulations)?
☐ YES ☒ NO
If No, please be aware that the facility must meet the appropriate deadline. (See Dates to Know at top of this page).
3. Does this facility have an UST system installed prior to 1965 or of unknown age? ☐ YES ☒ NO
If Yes, has the facility installed a leak detection system that complies with all provisions of the Federal UST Technical Regulations 40 CFR 280.40? ☐ YES ☐ NO
If No, were the closure procedures completed as required by the Federal UST Technical Regulations 40 CFR 280.71, 72? ☐ YES ☒ NO

SECTION C

RECORDKEEPING/COMPLIANCE

Please answer all the questions in this Section on a facility basis. Any one tank not in compliance requires a "NO" answer for the entire facility.

1. Does this facility have cathodic protection systems? ☐ YES ☑ NO
   If Yes, are the systems properly operated and maintained as required by the UST Technical Regulations Subchapter 6. ☐ YES ☐ NO
2. Are the performance claims and documentation of monitoring systems maintained by the owner or operator as required by Subchapter 6.6? ☐ YES ☑ NO
3. Are the proper monitoring, testing, sampling, repair and inventory records kept on-site as required by Subchapter 6.6? ☐ YES ☑ NO
4. Is the proper Release Response Plan kept on-site per Subchapter 5.5? ☐ YES ☑ NO
5. Does the facility have spill and overfill protection systems per Subchapter 5.2(a) (5)? ☐ YES ☑ NO
   If yes, are they properly operated and maintained as required by the UST Technical Regulations? ☐ YES ☑ NO
6. Have all Fill Ports been permanently marked as per API #1637 as stated in Subchapter 4.5(h)? ☐ YES ☑ NO

SECTION D

UNDERGROUND STORAGE TANK REGISTRATION QUESTIONNAIRE

Bureau of Underground Storage Tanks
Registration Section
1-800-722-TANK

Use this form ONLY when submitting corrections/changes to registration at Annual Certification

General Facility Information

1. Facility Name: ALLIED BUILDING SUPPLY CO
2. Facility Location: 1011 WEST ELIZABETH AVE.
   NUMBER AND STREET: LINDEN
   CITY OR MUNICIPALITY: UNION
   COUNTY: NJ (STATE) 07036 (ZIP CODE)
   BLOCK: 00257 LOT: 00110
3. Owner's mailing address: P.O. BOX 1387
   NUMBER AND STREET: UNION
   CITY OR MUNICIPALITY: UNION
   COUNTY: NJ (STATE) 07083-1387 (ZIP CODE)
4. Owner's name: DANIEL WINTERS
5. Contact person (Facility Operator): ALFIORE
   PERSON OR TITLE
6. Contact telephone number: 908 (AREA CODE) 964 (CHANGE) 1515 (NUMBER)
7. Total number of facility underground storage tanks: 0001 (Complete Questions 12 thru 32 for each tank)
8. Total facility underground storage tank capacity (gallons): 00020000
9. Status of owner: (mark one) A. ☐ CURRENT B. ☐ FORMER
10. Type of owner (mark one) A. ☐ State B. ☒ Commercial C. ☐ Local D. ☐ Federal E. ☐ Charitable or Public School F. ☐ Residence G. ☐ Ownership Uncertain
11a. Two copies of a site plan are submitted with this registration A. ☒ YES B. ☐ NO

Submit two (2) copies of SITE PLAN showing facility or property boundary, buildings and the location of ALL underground storage tanks. EITHER, an existing engineering site plan, if available, OR a neat and legible hand-drawn sketch of the site may be submitted. In either case the site plan or sketch MUST show the location and distances that tanks, buildings, and dispensers are from the facility's property boundary. Include all tanks that are: E (existing/in use), P (empty), M (emergency), A (abandoned), C (other). Each underground tank on the site plan or sketch shall be numbered in accordance with the instructions for question 12. The number assigned to a tank on the site plan or sketch MUST match and be identical to the tank identification number assigned to that tank on this form.

INCLUDE FACILITY NAME, OWNER'S NAME, FACILITY ADDRESS AND TELEPHONE NUMBER ON ALL SITE PLANS.

11b. Do you have financial responsibility assurance? ☑ YES ☐ NO

Liability (Type)

CIGNA (Company/Carrier)

MFC) 1985168 (Policy Number)

1/1/92 (Expiration Date)

UST NO. _____

ALL underground tanks, including those taken out of operation (UNLESS THE TANK WAS REMOVED FROM THE GROUND) must be included in this registration. All in-ground tanks shall be reported as underground tanks on this questionnaire regardless of their current status; Existing, E; Empty, P; Emergency, M; Abandoned, A; or Other, C.

RECEIVED MAR 15 1988

ANNUAL CERTIFICATION
QUESTIONNAIRE

SECTION A:

Have there been any changes in this facility's registration status during the past twelve months that have not already been reported to the Bureau of Underground Storage Tanks on a Standard Reporting Form?

☒ NO ☐ YES

If NO, please complete Sections B, D, E and return this form with the top half of the billing invoice and the appropriate fee.

If YES, please check the appropriate type of change (s) below that occurred and complete the enclosed Registration Questionnaire with the NEW information ONLY and sign the questionnaire and return it along with the top half of the billing invoice, this form and the appropriate fee.

____ Company Name and Address (ownership change)

____ Facility location

____ Operator(s)

____ Contact Person(s)

____ Type of product(s) stored

____ Spills, accidents or leaks

____ Other (explain)

(OVER)

SECTION B:

Are inventory records maintained on-site?

☐ NO ☒ YES

Have any unaccountable losses been discovered at your facility?

☒ NO ☐ YES

NOTE It is required that all leaks be reported to the NJDEP within 24 hours of discovery by contacting the NJDEP Hotline telephone number (609) 292-7172.

SECTION C:

Failure by owner or operator of an underground storage tank to comply with any requirement of the State Act or this chapter may result in the penalties set forth in N.J.S.A. 58:10A-10.

SECTION D:

CERTIFICATION

*** This registration form shall be signed by the highest ranking individual at the facility with overall responsibility for that facility. (7:14B-2.3 (a) 1). ***

"I certify under penalty of law that the information provided in this document is true, accurate and complete. I am aware that there are significant civil and criminal penalties for submitting false, inaccurate or incomplete information, including fines and/or imprisonment.

UNDERGROUND STORAGE TANK REGISTRATION QUESTIONNAIRE

Bureau of Underground Storage Tanks
Registration Section
1-800-722-TANK

Use this form ONLY when submitting corrections/changes to registration at Annual Certification

General Facility Information

1. Facility name: ALLIED BUILDING SUPPLY CO
2. Facility location: 1011 WEST ELIZABETH AVENUE (NUMBER AND STREET)
   LINDEN (CITY OR MUNICIPALITY)
   UNION (COUNTY) NJ (STATE) 07036 (ZIP CODE)
3. Owner's mailing address: 581 RAHWAY AVENUE (NUMBER AND STREET)
   UNION (CITY OR MUNICIPALITY)
   UNION (COUNTY) NJ (STATE) 07083 (ZIP CODE)
4. Owner's name: DANIEL WINTERS
5. Contact person (Facility Operator) JOHN SAUER (PERSON OR TITLE)
6. Contact telephone number: 201 (AREA CODE) 862 (EXCHANGE) 4070 (NUMBER)
7. Total number of facility underground storage tanks: 0001 (Complete Questions 12 thru 33 for each tank)
8. Total facility underground storage tank capacity (gallons): 0002000
9. Status of owner: (mark one) A. ☒ CURRENT B. ☐ FORMER
10. Type of owner: (mark one) A. ☐ STATE OR LOCAL GOVERNMENT B. ☒ PRIVATE OR CORPORATE C. ☐ OWNERSHIP UNCERTAIN D. ☐ FEDERAL GOVT. (GSA FACILITY I.D. NUMBER)
11. Two copies of a site plan are submitted with this registration. A. ☑ YES B. ☐ NO

Submit two (2) copies of SITE PLAN showing facility or property boundary, buildings and the location of ALL underground storage tanks. EITHER, an existing engineering site plan, if available, OR a neat and legible hand-drawn sketch of the site may be submitted. In either case the site plan or sketch MUST show the location and distances that tanks, buildings, and dispensers are from the facility's property boundary. Include all tanks that are operating or existing, (E); abandoned, (A); or out of service, (C). Each underground tank on the site plan or sketch shall be numbered in accordance with the instructions for question 12. The number assigned to a tank on the site plan or sketch MUST match and be identical to the tank identification number assigned to that tank on this form.

INCLUDE FACILITY NAME, OWNER'S NAME, FACILITY ADDRESS AND TELEPHONE NUMBER ON ALL SITE PLANS.

UST NO. _____

ALL underground tanks, including those taken out of operation. **(UNLESS THE TANK WAS REMOVED FROM THE GROUND)** must be included in this registration. All in-ground tanks shall be reported as underground tanks on this questionnaire regardless of their current status; Existing, E; Abandoned, A; or out of service, C.

UNDERGROUND STORAGE TANK REGISTRATION QUESTIONNAIRE

JUN 01 1988

Bureau of Ground Water Quality Management
Underground Storage Tank Section
(609)984-9736

COMPLIANCE WITH THIS REGISTRATION WILL MEET ALL REGISTRATION REQUIREMENTS OF THE FEDERAL LAW, P.L. 93-616, THE HAZARDOUS AND SOLID WASTE AMENDMENTS OF 1984, SUBTITLE I, SECTIONS 9001-9010.

General Facility Information

1. Facility name: ALLIED BUILDING SUPPLY CO

2. Facility location: 1011 WEST ELIZABETH AVENUE
NUMBER AND STREET
LINDEN
CITY OR MUNICIPALITY
UNION — COUNTY; NJ — STATE; 07036 — ZIP CODE

3. Owner's mailing address: 581 RAHWAY AVENUE
NUMBER AND STREET
UNION
CITY OR MUNICIPALITY
UNION — COUNTY; NJ — STATE; 07083 — ZIP CODE

4. Owner's name: DANIELI WINTERS

5. Contact person (Facility Operator) JOHN SAUER
PERSON OR TITLE

6. Contact telephone number: 201 — AREA CODE; 862 — EXCHANGE; 4070 — NUMBER

7. Total number of facility underground storage tanks: 0001 (Complete Questions 12 thru 33 for each tank)

8. Total facility underground storage tank capacity (gallons): 0002000

9. Type and status of owner (mark all that apply).

A. ☒ CURRENT B. ☐ FORMER C. ☐ STATE OR LOCAL GOVERNMENT D. ☐ PRIVATE OR CORPORATE E. ☐ OWNERSHIP UNCERTAIN F. ☐ FEDERAL GOVT. (GSA FACILITY I.D. NUMBER)

10. Two copies of a site plan are submitted with this registration. A. ☒ YES B. ☐ NO

Submit two (2) copies of SITE PLAN showing facility or property boundary, buildings and the location of ALL underground storage tanks. EITHER, an existing engineering site plan, if available, OR a neat and legible hand-drawn sketch of the site may be submitted. In either case the site plan or sketch MUST show the location and distances that tanks, buildings, and dispensers are from the facility's property boundary. Include all tanks that are operating or existing, (E); abandoned, (A); or closed, (C). Each underground tank on the site plan or sketch shall be numbered in accordance with the instructions for question 12. The number assigned to a tank on the site plan or sketch MUST match and be identical to the tank identification number assigned to that tank on this form.

INCLUDE FACILITY NAME, OWNER'S NAME, FACILITY ADDRESS AND TELEPHONE NUMBER ON ALL SITE PLANS.

UST NO. 12948

11. All underground tanks used after January 1, 1974 including those taken out of operation, **(UNLESS THE TANK WAS REMOVED FROM THE GROUND)** must be included in this registration. All in-ground tanks shall be reported as underground tanks on this questionnaire regardless of their current status; Existing, E; Abandoned, A; or Closed C.

SET Proposal No: **22-095GD**

Mr. John Robinson
Dewberry
600 Parsippany Road
Parsippany, New Jersey

Subject: Geophysical Investigation Results
Alfred Building Products Site
101 Elizabeth Avenue
Linden, New Jersey

Dear Mr. Robinson,

Subsurface Environmental Technologies (SET) Geophysics Department presents this report to Dewberry of Parsippany, New Jersey describing the methods and results of a geophysical investigation conducted at the Alfred Building Products Site located at 101 Elizabeth Avenue in Linden, New Jersey. For this project, SET surveyed several locations where buried monitoring wells (MW) may be present, as defined by Dewberry in the field. The field activities for this investigation were completed by SET on Thursday April 14, 2022.

Objectives

The primary objective of this geophysical survey was to locate six (6) buried monitoring wells that were though to exist at the site. The geophysical data was analyzed closely for these targets. To meet the objective of the investigation, SET used the hand-held electromagnetic (HHEM), radiofrequency (RF), and ground-penetrating radar (GPR) methods.

Survey Grids

The HHEM, GPR and RF data were acquired in the scan mode over the discrete areas described above. Scans were collected in a radial pattern about each discrete location to provide optimal subsurface coverage. In the event that a buried utility or feature was detected, the boring location was moved to a location where no buried anomalies were observed. The positions of all detected pipelines and anomalies were marked on the ground with spray paint.

Geophysical Methods

<u>Hand-Held Electromagnetic Methods</u>

The hand-held electromagnetic method uses the principle of electromagnetic induction to detect shallowly-buried metal objects such as underground storage tanks (USTs), metal utility conduits,

reinforced concrete slabs, manhole covers, and miscellaneous metal debris. To complete this task, the operator carries the hand-held radio transmitter-receiver unit above the ground and continually scans the surface. A primary coil broadcasts a radio signal from the transmitter. This primary radio signal induces secondary electrical currents in metal objects. These secondary currents, in turn, produce a magnetic field which is detected by the receiver.

The HHEM instrument SET typically uses for shallow investigations is a Fisher TW-6 pipe and cable locator by Fischer, Inc. This instrument operates by generating both a unitless meter reading and an audible signal response when near a metal object. The peak instrument response usually occurs when the unit is directly over the object.

Ground Penetrating Radar (GPR) Method

The ground-penetrating radar (GPR) method was used to provide subsurface imaging information throughout the areas of investigation. The GPR method is based upon the transmission of repetitive, radio-frequency electromagnetic (EM) pulses into the subsurface. When the transmitted energy of down-going wave contacts an interface of dissimilar electrical character, part of the energy is returned to the surface in the form of a reflected signal. This reflected signal is detected by a receiving transducer and is displayed on the screen of the GPR unit as well as being recorded on the internal hard drive. The received GPR response remains constant as long as the electrical contrast between media is present and constant. Lateral or vertical changes in the electrical properties of the subsurface result in equivalent changes in the GPR responses. The system records a continuous image of the subsurface by plotting two-way travel time of the reflected EM pulse versus distance traveled along the ground surface. Two-way travel time values are then converted to depth using known soil velocity functions.

The GPR field procedures involved (1) instrument calibration, (2) test run completion, (3) production profile collection and recording, and (4) data storage for subsequent processing and analysis in the office. Each radar profile was examined for characteristic GPR signatures that may indicate the presence of buried targets. A Geophysical Survey System SIR System 2 and a 400 megahertz (MHz) antenna were used with a recording window of 60 nanoseconds (ns) to provide the required depth penetration and subsurface detail.

Radio-Frequency Method

The RadioDetection RD4000 multi-frequency utility locating system was used for this project. This instrument consists of a receiver/tracer and a remote transmitter, which operates at frequencies between 8 kHz and 200 kHz. The unit provides audio and visual feedback to the operator when a utility that is coupled with the transmitted signal is crossed. The transmitter produces a radio-frequency signal in the utility to be traced by either induction coupling or direct hookup. The receiver output provides measured field strength of the received signal and varies an audible pitch that is dependent upon the distance to the utility. By carefully adjusting the gain of the receiver, it is possible to determine the location of the utility and to separate it from possible adjacent utilities. In addition, the receiver can be used in 60 Hz passive mode to identify active electrical lines or lines that possess an induced current.

Results

SET has enclosed 2 figures with this report. Figure 1 is an annotated, geo-referenced orthophoto that shows the approximate locations of the six wells as placed by Dewberry, and Figure 2 shows site photographs of five of the well locations. The results of the geophysical survey are summarized below.

Buried Monitoring Wells

SET detected a few "spot" anomalies near the marked well locations where historic data indicated their presence. SET placed pink circles at those locations where the geophysical data provided responses that were consistent with a possible buried metal object roughly the size of a metal well cap. The site photos presented in Figures 2 and 3 show these locations for MW-1 through MW-5. No photograph of MW-6 was available, however SET did not detect any suspicious anomalies in that survey area. For those locations where no metal anomalies were detected, it may be that the metal well caps were removed during the parking lot construction. PVC wells are extremely difficult to detect.

Data Quality

The data quality for this project was good. The HHEM, RF, and GPR responses at the site were consistent and correlated well between profiles. The interpretations presented in this report are based on observed geophysical responses, visual observations, and historical information.

Closing

The geophysical data collection and interpretation methods used in this investigation are consistent with standard practices applied to similar geophysical investigations. The correlation of geophysical responses is based on the past results of similar surveys, although it is possible that some variation could exist at this site. Due to the nature of geophysical data, no guarantees have been made or inferred regarding the presence or absence of additional objects or targets beyond those identified or beyond the detection limits of the instrumentation used in this investigation.

If you have any questions, please contact me 609-480-9382. It was a pleasure working with you on this project, and look forward to conducting geophysical investigations for you in the future.

Sincerely,

Peter T. Miller PhD, P.G.
Senior Geophysicist, SET

Alfred Building Products Site

101 Elizabeth Avenue
Linden, New Jersey

Legend:

⊙ MW Location defined by Dewberry

Notes:

(1) The primary objectives of this geophysical survey were to locate 6 buried wells. To meet the objectives of the investigation, SET used a GPR System 3000 Ground Penetrating Radar (GPR) unit with a 400 MHz antenna, a TW-6 hand held electromagnetic (HHEM) instrument by Fisher, Inc., and a Radiofrequency (RF) device by Radiodetection, Inc. Their approximate locations were marked on the ground by Dewberry prior to the start of the geophysical investigation.

(2) SET detected a few "spot" anomalies near the marked well locations where historic data indicated their presence. SET placed pink circles at those locations where the geophysical data provided responses that were consistent with a possible buried metal object roughly the size of a metal well cap. The site photos presented in Figures 2 and 3 show these locations.

(3) The positions on this map should be considered approximate. They were not surveyed by a licensed surveyor.

(4) The items on this figure may not be all inclusive. SET does not warrant the fact that additional buried features may be present at this site.

1. Name of Well Owner: NJ TRANSIT Corporation
2. Well Location (Street Address): 101 Elizabeth Avenue
3. Well Location (Municipal Block and Lot) Block# 254 Lot # 10

SECTION C. WELL LOCATION SPECIFICS

1. Well Permit Number (This number must be permanently affixed to the well casing):	E202203885
2. Site Well Number as shown on application or plans):	MW-1R
3. Well Completion Date:	4/14/2022
4. Distance from Top of Casing (cap off) to ground surface (nearest 0.01'):	0.69'
5. Total Depth of Well to the nearest ½ foot:	15
6. Depth to Top of Screen (or top of open hole) from top of casing (nearest 0.01'):	5.00
7. Screen Length (or length of open hole) in feet:	10
8. Screen or Slot Size:	10
9. Screen or Slot Material:	PVC
10. Casing Material (PVC, steel, or other – specify):	PVC
11. Casing Diameter (inches):	2
12. Static Water Level from top of casing at the time of installation (nearest 0.01'):	9.28
13. Yield (gallons per minute):	0.5
14. Development Techinque (specify):	Pump & Surge
15. Length of Time well is developed/pumped or bailed (hours and minutes):	1 hour 10 minutes

Data of Known Quality Conformance/Non-Conformance Summary Questionnaire

Laboratory Name: Hampton-Clarke

Client: Dewberry

Project Location: Linden, NJ

Project Number: 2041509

Laboratory Sample ID(s): AD30164

Sampling Date(s): 4/14/22

List DKQP Methods Used: 8260D, 524.2, 8270E, 8081B, 8082A, NJEPH, 6010D, 6020B, 9012B, 7196A

1	For each analytical method referenced in this laboratory report package, were all specified QA/QC performance criteria followed, including the requirement to explain any criteria falling outside of acceptable guidelines, as specified in the NJDEP Data of KnownQuality performance standards?	Yes No
1A	Were the method specified handling, preservation, and holding time requirements met?	Yes No
1B	*EPH Method:* Was the EPH method conducted without significant modifications?	Yes No
2	Were all samples received by the laboratory in a condition consistent with that described on the associated chain-of-custody document(s)?	Yes No
3	Were samples received at an appropriate temperature (4±2°C)?	Yes No N/A
4	Were all QA/QC performance criteria specified in the NJDEP DKQP standards achieved?	Yes No
5	a) Were reporting limits specified or referenced on the chain-of-custody or communicated to the laboratory prior to sample receipt? b) Were these reporting limits met?	Yes No Yes No N/A
6	For each analytical method referenced in this laboratory report package, were results reported for all constituents identified in the method-specific analyte lists presented in the DKQP documents and/or site-specific QAPP?	Yes No
7	Are project-specific matrix spikes and/or laboratory duplicates included in this data set?	Yes No

Notes: For all questions to which the response was "No" (with the exception of question #7), additional information should be provided in an attached narrative. If the answer to question #1, #1A, or #1B is "No", the data package does not meet the requirements for "Data of Known Quality".

QC Review

HC Case Narrative

Client: Dewberry **HC Project:** 2041509
Project: NJT linden Station #2

This case narrative is in the form of an exception report. Method specific and/or QA/QC anomalies related to this report only are detailed below.

Volatile Organic Analysis:

The Method Blank Spike for batch 101380 had recoveries outside QC laboratory and DKQP limits. Please refer to the applicable Form 3 for the recoveries. Please refer to Form 4 to see which samples are associated with the Method Blank Spike.

The Matrix Spike and/or Matrix Spike Duplicate for batch 101380 had recoveries outside QC laboratory and DKQP limits. Please refer to the applicable Form 3 for the recoveries.

2-Chloroethylvinylether did not recover in the Matrix Spike and/or Matrix Spike Duplicate in batch 101380 due to acid preservation of sample. 2-Chloroethylvinylether readily decomposes under acidic conditions. The recovery of 2-Chloroethylvinylether is within QC limits in the Laboratory Control Sample. Please refer to the applicable Form 3 for the recoveries.

HC Reporting Limit Definitions/Data Qualifiers

REPORTING DEFINITIONS

DF = Dilution Factor

DUP = Duplicate

LCS = Laboratory Control Spike

MBS = Method Blank Spike

MDL = Method Detection Limit

MR = Matrix Replicate

MS = Matrix Spike

MSD = Matrix Spike Duplicate

NA = Not Applicable

ND = Not Detected

PS = Post Digestion Spike

RL* = Reporting Limit

RT = Retention Time

SD = Serial Dilution

**Samples with elevated Reporting Limits (RLs) as a result of a dilution may not achieve client reporting limits in some cases. The elevated RLs are unavoidable consequences of sample dilution required to quantitate target analytes that exceed the calibration range of the instrument.*

DATA QUALIFIERS

A- Indicates that the Tentatively Identified Compound (TIC) is suspected to be an aldol-condensation product. These compounds are by-products of acetone and methylene chloride used in the extraction process.

B- Indicates analyte was present in the Method Blank and sample.

d- For Pesticide and PCB analysis, the concentration between primary and secondary columns is greater than 40%. The lower concentration is generally reported.

E- Indicates the concentration exceeded the upper calibration range of the instrument.

J- Indicates the value is estimated because it is either a Tentatively Identified Compound (TIC) or the reported concentration is greater than the MDL but less than the RL. For samples results between the MDL and RL there is a possibility of false positives or misidentification at the quantitation levels. Additionally, the acceptance criteria for QC samples may not be met.

R- Retention Time is out.

Y- Indicates a contaminant found in the blank at less than 10% of the concentration of a contaminant found in the sample.

Customer Information

1a) Customer: Dewberry Engineers Inc
Address: 600 Parsippany Rd #101, Parsippany, NJ
1b) Email/Cell/Fax/Ph: jrobinson@dewberry.com
1c) Send Invoice to: John Robinson
1d) Send Report to: John Robinson

Project Information

2a) Project: Allied Building Supplies Inc - NJ Transit Linden Station #2
2b) Project Mgr: John Robinson
2c) Project Location (City/State): Linden, NJ
2d) Quote/PO # (If Applicable):

FOR LAB USE ONLY

Batch # AD30164

===> Check If Contingent ===>

Matrix Codes
DW - Drinking Water S - Soil A - Air
GW - Ground Water SL - Sludge
WW - Waste Water OL - Oil
OT - Other (please specify under item 9, Comments)

7) Analysis (specify methods & parameter lists)

		4/14/22	1810

11) Sampler (print name): John Robinson Date: 4/14/22

Additional Notes: DKQP LSRP

Comments, Notes, Special Requirements, HAZARDS

Indicate if low-level methods required to meet current groundwater standards (SPLP for soil):
- [ ] BN or BNA (8270E SIM)
- [ ] VOC (8260D SIM or 8011)
- [ ] SPLP (BN, BNA, Metals)
- [ ] 1,4 Dioxane

Check if applicable:
- [ ] Project-Specific Reporting Limits
- [ ] High Contaminant Concentrations
- [X] NJ LSRP Project (also check boxes above/right)

For NJ LSRP projects, indicate which standards need to be met:
- [X] NJDEP GWQS
- [ ] NJDEP SRS
- [ ] NJDEP SPLP
- [ ] Other (specify):

Cooler Temperature: 3.0

Please note NUMBERED items. If not completed your analytical work may be delayed.
A fee of $5/sample will be assessed for storage should sample not be activated for any analysis.

Internal use: sampling plan (check box) HC [ ] or client [ ] FSP#

PROJECT MODIFICATIONS

Client: DEWBERRY **HC Project #:** 2041509

Project: NJT Linden Station #2

CONDITION UPON RECEIPT

Batch Number AD30164 Entered By: srobles

Date Entered 4/15/2022 11:09:00 AM

1	Yes	Is there a corresponding COC included with the samples?
2	Yes	Are the samples in a container such as a cooler or Ice chest?
3	No	Are the COC seals intact?
4	T0054	<--- Thermometer ID. Please specify the Temperature inside the container (in degC). 3.1
5	Yes	Are the samples refrigerated (where required)/have they arrived on ice?
6	Yes	Are the samples within the holding times for the parameters listed on the COC? IF no, list parameters and samples:
7	Yes	Are all of the sample bottles intact? If no, specify sample numbers broken/leaking
8	Yes	Are all of the sample labels or numbers legible? If no specify:
9	Yes	Do the contents match the COC? If no, specify
10	Yes	Is there enough sample sent for the analyses listed on the COC? If no, specify:
11	Yes	Are samples preserved correctly?
12	Yes	Was temperature blank present (Place comment below if not)? If not was temperature of samples verified?
13	NA	Other comments ...Specify (TB date, sample matrix, any missing info, etc.) TB DATE:4/13/22
14	NA	Corrective actions (Specify item number and corrective action taken).
15	NA	Were any samples for ortho-phosphate or dissolved ferrous iron field filtered?

ORGANICS VOLATILE REPORT

Sample Number: AD30164-001
Client Id: TWP-1
Data File: 8M557716.D
Analysis Date: 04/20/22 02:46
Date Rec/Extracted: 04/14/22-NA
Column: DB-624 25M 0.200mm ID 1.12um film

Method: EPA 8260D
Matrix: Aqueous
Initial Vol: 5ml
Final Vol: NA
Dilution: 1.00
Solids: 0

Units: ug/L

Cas #	Compound	RL	Conc	Cas #	Compound	RL	Conc
71-43-2	Benzene	0.50	U	95-47-6	o-Xylene	1.0	U
100-41-4	Ethylbenzene	1.0	U	108-88-3	Toluene	1.0	U
79601-23-1	m&p-Xylenes	1.0	U	1330-20-7	Xylenes (Total)	1.0	U

Worksheet #: 636559

Total Target Concentration 0

ColumnID: (^) Indicates results from 2nd column

U - Indicates the compound was analyzed but not detected.
B - Indicates the analyte was found in the blank as well as in the sample.
E - Indicates the analyte concentration exceeds the calibration range of the instrument.
R - Retention Time Out
J - Indicates an estimated value when a compound is detected at less than the specified detection limit.
d - Pesticide %Diff>40% between columns due to coelution. Lower concentration used

Chlordane (Total) is sum of a-Chlordane and y-Chlordane.

Total Target Concentration 0

ColumnID: (^) Indicates results from 2nd column

U - Indicates the compound was analyzed but not detected.
B - Indicates the analyte was found in the blank as well as in the sample.
E - Indicates the analyte concentration exceeds the calibration range of the instrument.
R - Retention Time Out
J - Indicates an estimated value when a compound is detected at less than the specified detection limit.
d - Pesticide %Diff>40% between columns due to coelution. Lower concentration used
Chlordane (Total) is sum of a-Chlordane and y-Chlordane.

Flags	*Note:* Avg Rsd: 8.169
a - failed the min rf criteria	*Corr 1 = Correlation Coefficient for linear Eq.*
c - failed the minimum correlation coeff criteria(if applicable)	*Corr 2 = Correlation Coefficient for quad Eq.*
	Fit = Indicates whether Avg RF, Linear, or Quadratic Curve was used for compound.

Internal Standard Areas

Upper Limit = + 100% of internal standard area from daily cal or mid pt.

Lower Limit = - 50% of internal standard area from daily cal or mid pt.

Flags:

A - Indicates the compound failed the internal standard area criteria

R - Indicates the compound failed the internal standard retention time criteria.

Retention Times: Limit = within +/- 0.5 min of internal standard retention time from the daily cal or mid pt.

Internal Standard Areas

Upper Limit = + 100% of internal standard area from daily cal or mid pt.

Lower Limit = - 50% of internal standard area from daily cal or mid pt.

Flags:

A - Indicates the compound failed the internal standard area criteria

R - Indicates the compound failed the internal standard retention time criteria.

Retention Times: Limit = within +/- 0.5 min of internal standard retention time from the daily cal or mid pt.

Data of Known Quality Conformance/Non-Conformance Summary Questionnaire

Laboratory Name: Hampton-Clarke

Client: Dewberry

Project Location: Linden, NJ

Project Number: 2070616

Laboratory Sample ID(s): AD31818

Sampling Date(s): 7/5/2022, 7/6/2022

List DKQP Methods Used: 8260D, 524.2, 8270E, 8081B, 8082A, NJEPH, 6010D, 6020B, 9012B, 7196A

1	For each analytical method referenced in this laboratory report package, were all specified QA/QC performance criteria followed, including the requirement to explain any criteria falling outside of acceptable guidelines, as specified in the NJDEP Data of Known Quality performance standards?	Yes No
1A	Were the method specified handling, preservation, and holding time requirements met?	Yes No
1B	*EPH Method:* Was the EPH method conducted without significant modifications?	Yes No
2	Were all samples received by the laboratory in a condition consistent with that described on the associated chain-of-custody document(s)?	Yes No
3	Were samples received at an appropriate temperature (4±2°C)?	Yes No N/A
4	Were all QA/QC performance criteria specified in the NJDEP DKQP standards achieved?	Yes No
5	a) Were reporting limits specified or referenced on the chain-of-custody or communicated to the laboratory prior to sample receipt? b) Were these reporting limits met?	Yes No Yes No N/A
6	For each analytical method referenced in this laboratory report package, were results reported for all constituents identified in the method-specific analyte lists presented in the DKQP documents and/or site-specific QAPP?	Yes No
7	Are project-specific matrix spikes and/or laboratory duplicates included in this data set?	Yes No

Notes: For all questions to which the response was "No" (with the exception of question #7), additional information should be provided in an attached narrative. If the answer to question #1, #1A, or #1B is "No", the data package does not meet the requirements for "Data of Known Quality".

QC Review

HC Case Narrative

Client: Dewberry **HC Project:** 2070616
Project: NJT Allied Bldg Materials

This case narrative is in the form of an exception report. Method specific and/or QA/QC anomalies related to this report only are detailed below.

Volatile Organic Analysis:

The Method Blank Spike for batch 102306 had recoveries outside QC limits (Laboratory & DKQP limits). Please refer to the applicable Form 3 for the recoveries. Please refer to Form 4 to see which samples are associated with the Method Blank Spike.

The MSD RPD, Matrix Spike and/or Matrix Spike Duplicate for batch 102306 had recoveries outside QC limits (Laboratory & DKQP Limits). Please refer to the applicable Form 3 for the recoveries.

2-Chloroethylvinylether did not recover in the Matrix Spike and/or Matrix Spike Duplicate in batch 102306 due to acid preservation of sample. 2-Chloroethylvinylether readily decomposes under acidic conditions. The recovery of 2-Chloroethylvinylether is within QC limits in the Laboratory Control Sample. Please refer to the applicable Form 3 for the recoveries.

Re: NJT Allied Bldg Materials (H-C proj 2070616)

Dear Mr. Robinson:

When Hampton-Clarke analyzed the NJT Allied Bldg Materials samples for volatile organic compounds in batch 102306, the associated Method Blank Spike, Matrix Spike, Matrix Spike Duplicate, and MS/MSD RPD failed to meet DKQP criteria for some compounds. Those compounds were Acrolein, n-Amyl acetate, Bromobenzene, n-Butyl acrylate, Butyl methacrylate, Camphene, 2-Chloroethylvilyl ether, Cyclohexanone, trans-1,4-Dichloro-2-butene, p-Diethylbenzene, Ethyl methacrylate, and Furan.

As the compounds which failed were not compounds of interest for your project, it is my opinion that these failures should not affect the usability of your results.

Sincerely,

Sean Berls
QA Manager
Hampton-Clarke

HC Reporting Limit Definitions/Data Qualifiers

REPORTING DEFINITIONS

DF = Dilution Factor

DUP = Duplicate

LCS = Laboratory Control Spike

MBS = Method Blank Spike

MDL = Method Detection Limit

MR = Matrix Replicate

MS = Matrix Spike

MSD = Matrix Spike Duplicate

NA = Not Applicable

ND = Not Detected

PS = Post Digestion Spike

RL* = Reporting Limit

RT = Retention Time

SD = Serial Dilution

**Samples with elevated Reporting Limits (RLs) as a result of a dilution may not achieve client reporting limits in some cases. The elevated RLs are unavoidable consequences of sample dilution required to quantitate target analytes that exceed the calibration range of the instrument.*

DATA QUALIFIERS

A- Indicates that the Tentatively Identified Compound (TIC) is suspected to be an aldol-condensation product. These compounds are by-products of acetone and methylene chloride used in the extraction process.

B- Indicates analyte was present in the Method Blank and sample.

d- For Pesticide and PCB analysis, the concentration between primary and secondary columns is greater than 40%. The lower concentration is generally reported.

E- Indicates the concentration exceeded the upper calibration range of the instrument.

J- Indicates the value is estimated because it is either a Tentatively Identified Compound (TIC) or the reported concentration is greater than the MDL but less than the RL. For samples results between the MDL and RL there is a possibility of false positives or misidentification at the quantitation levels. Additionally, the acceptance criteria for QC samples may not be met.

R- Retention Time is out.

Y- Indicates a contaminant found in the blank at less than 10% of the concentration of a contaminant found in the sample.

CONDITION UPON RECEIPT

Batch Number AD31818 Entered By: maxwell

Date Entered 7/6/2022 1:58:00 PM

1	Yes	Is there a corresponding COC included with the samples?
2	Yes	Are the samples in a container such as a cooler or Ice chest?
3	No	Are the COC seals intact?
4	T0054	<--- Thermometer ID. Please specify the Temperature inside the container (in degC). 2.8
5	Yes	Are the samples refrigerated (where required)/have they arrived on ice?
6	Yes	Are the samples within the holding times for the parameters listed on the COC? IF no, list parameters and samples:
7	Yes	Are all of the sample bottles intact? If no, specify sample numbers broken/leaking
8	Yes	Are all of the sample labels or numbers legible? If no specify:
9	Yes	Do the contents match the COC? If no, specify
10	Yes	Is there enough sample sent for the analyses listed on the COC? If no, specify:
11	Yes	Are samples preserved correctly?
12	Yes	Was temperature blank present (Place comment below if not)? If not was temperature of samples verified?
13	Yes	Other comments ...Specify (TB date, sample matrix, any missing info, etc.) TRIP BLANK DATE 7/5/22
14	NA	Corrective actions (Specify item number and corrective action taken).
15	NA	Were any samples for ortho-phosphate or dissolved ferrous iron field filtered?

Worksheet #: 648123

Total Target Concentration 0

ColumnID: (^) Indicates results from 2nd column

U - Indicates the compound was analyzed but not detected.
B - Indicates the analyte was found in the blank as well as in the sample.
E - Indicates the analyte concentration exceeds the calibration range of the instrument.
R - Retention Time Out
J - Indicates an estimated value when a compound is detected at less than the specified detection limit.
d - Pesticide %Diff>40% between columns due to coelution. Lower concentration used

Chlordane (Total) is sum of a-Chlordane and y-Chlordane.

Flags

a - failed the min rf criteria

c - failed the minimum correlation coeff criteria(if applicable)

Note: Avg Rsd: 8.169

Corr 1 = Correlation Coefficient for linear Eq.

Corr 2 = Correlation Coefficient for quad Eq.

Fit = Indicates whether Avg RF, Linear, or Quadratic Curve was used for compound.

Method: EPA 8260D

Form 6
Initial Calibration

Instrument: GCMS_8

Avg Rsd: 8.169

Flags

a - failed the min rf criteria

c - failed the minimum correlation coeff criteria(if applicable)

Note:

Corr 1 = Correlation Coefficient for linear Eq.

Corr 2 = Correlation Coefficient for quad Eq.

Fit = Indicates whether Avg RF, Linear, or Quadratic Curve was used for compound.

RE: *Abandonment of Lost Wells: PI 012948 Allied Building Supply Co., a.k.a. NJ TRANSIT Linden Station Lot 2*.

Dear NJDEP Representative,

On behalf of NJ TRANSIT, Dewberry Engineers Inc. is sending this letter to inform you that six monitoring wells at the former Allied Building Supply Co. facility, now known as the NJ TRANSIT Linden Station Lot 2, cannot be located. The site has been paved over with asphalt. A geophysical investigation conducted at the six well locations was unsuccessful in locating these wells. A request for information was submitted to the NJDEP office of Well Permitting. Well abandonment reports for five of the wells were located (attached). No information was recovered for monitoring well MW-1. The information regarding the wells is summarized below:

1. Responsible party/property owner:

   Mr. John Geitner
   Director of Site Remediation, Tanks, and Waste
   NJ TRANSIT Corporation
   One Penn Plaza East, 7th Floor
   Newark, New Jersey 07105

2. The facility and location information:

   NJ TRANSIT Linden Station Lot 2, 101 Elizabeth Ave., City of Linden, Union County, Block 254 Lot 10. NJ State Plane Coordinates: North 654269, East 560658

3. NJDEP **PI No. 012948**

4. Date when it was discovered that the well was lost: **March 10, 2022 Site Visit**

5. The approximate date the wells were lost: **2001**

6. Circumstances resulting in the well being lost: T**he site was paved to create a rail commuter parking lot and it is not known if well MW-1 was abandoned.**

7. Detailed description of the action(s) taken to locate all monitoring wells including MW-1: **A geophysical investigation consisting of the collection of electromagnetic (EM) metal detection data in the vicinity of each former monitoring well was conducted along parallel transects separated by five feet. Ground penetrating radar (GPR), metal detection and**

magnetometry data were collected over the former and proposed (MW-1R) well locations. Line tracing data was also collected in an effort to detect buried utilities. The results indicated that two subsurface metallic anomalies were detected in the vicinity of MW-3 and MW-5, but none of the six former monitoring wells were identified. Well abandonment reports have subsequently been found for wells MW-3 and MW-5.

Well permit number and well construction specifications, if known**. A completed individual well search questionnaire was submitted for each of the six former monitoring wells. The well permit number for former monitoring well MW-1 is 26-34471. According to the NJDEP Bureau of Records, records of the well is not available (Attachment 2). The well abandonment reports for the other five former monitoring wells (MW-2, MW-3, MW-4, MW-5, and MW-6, from the Bureau of Records) are presented in Attachment 3. MW-1 was likely abandoned with the other five monitoring wells at the site.**

Sincerely,

John Robinson

Subject: Geophysical Investigation Results
Alfred Building Products Site
101 Elizabeth Avenue
Linden, New Jersey

Dear Mr. Robinson,

Subsurface Environmental Technologies (SET) Geophysics Department presents this report to Dewberry of Parsippany, New Jersey describing the methods and results of a geophysical investigation conducted at the Alfred Building Products Site located at 101 Elizabeth Avenue in Linden, New Jersey. For this project, SET surveyed several locations where buried monitoring wells (MW) may be present, as defined by Dewberry in the field. The field activities for this investigation were completed by SET on Thursday April 14, 2022.

Objectives

The primary objective of this geophysical survey was to locate six (6) buried monitoring wells that were though to exist at the site. The geophysical data was analyzed closely for these targets. To meet the objective of the investigation, SET used the hand-held electromagnetic (HHEM), radiofrequency (RF), and ground-penetrating radar (GPR) methods.

Survey Grids

The HHEM, GPR and RF data were acquired in the scan mode over the discrete areas described above. Scans were collected in a radial pattern about each discrete location to provide optimal subsurface coverage. In the event that a buried utility or feature was detected, the boring location was moved to a location where no buried anomalies were observed. The positions of all detected pipelines and anomalies were marked on the ground with spray paint.

Geophysical Methods

<u>Hand-Held Electromagnetic Methods</u>

The hand-held electromagnetic method uses the principle of electromagnetic induction to detect shallowly-buried metal objects such as underground storage tanks (USTs), metal utility conduits,

reinforced concrete slabs, manhole covers, and miscellaneous metal debris. To complete this task, the operator carries the hand-held radio transmitter-receiver unit above the ground and continually scans the surface. A primary coil broadcasts a radio signal from the transmitter. This primary radio signal induces secondary electrical currents in metal objects. These secondary currents, in turn, produce a magnetic field which is detected by the receiver.

The HHEM instrument SET typically uses for shallow investigations is a Fisher TW-6 pipe and cable locator by Fischer, Inc. This instrument operates by generating both a unitless meter reading and an audible signal response when near a metal object. The peak instrument response usually occurs when the unit is directly over the object.

Ground Penetrating Radar (GPR) Method

The ground-penetrating radar (GPR) method was used to provide subsurface imaging information throughout the areas of investigation. The GPR method is based upon the transmission of repetitive, radio-frequency electromagnetic (EM) pulses into the subsurface. When the transmitted energy of down-going wave contacts an interface of dissimilar electrical character, part of the energy is returned to the surface in the form of a reflected signal. This reflected signal is detected by a receiving transducer and is displayed on the screen of the GPR unit as well as being recorded on the internal hard drive. The received GPR response remains constant as long as the electrical contrast between media is present and constant. Lateral or vertical changes in the electrical properties of the subsurface result in equivalent changes in the GPR responses. The system records a continuous image of the subsurface by plotting two-way travel time of the reflected EM pulse versus distance traveled along the ground surface. Two-way travel time values are then converted to depth using known soil velocity functions.

The GPR field procedures involved (1) instrument calibration, (2) test run completion, (3) production profile collection and recording, and (4) data storage for subsequent processing and analysis in the office. Each radar profile was examined for characteristic GPR signatures that may indicate the presence of buried targets. A Geophysical Survey System SIR System 2 and a 400 megahertz (MHz) antenna were used with a recording window of 60 nanoseconds (ns) to provide the required depth penetration and subsurface detail.

Radio-Frequency Method

The RadioDetection RD4000 multi-frequency utility locating system was used for this project. This instrument consists of a receiver/tracer and a remote transmitter, which operates at frequencies between 8 kHz and 200 kHz. The unit provides audio and visual feedback to the operator when a utility that is coupled with the transmitted signal is crossed. The transmitter produces a radio-frequency signal in the utility to be traced by either induction coupling or direct hookup. The receiver output provides measured field strength of the received signal and varies an audible pitch that is dependent upon the distance to the utility. By carefully adjusting the gain of the receiver, it is possible to determine the location of the utility and to separate it from possible adjacent utilities. In addition, the receiver can be used in 60 Hz passive mode to identify active electrical lines or lines that possess an induced current.

Results

SET has enclosed 2 figures with this report. Figure 1 is an annotated, geo-referenced orthophoto that shows the approximate locations of the six wells as placed by Dewberry, and Figure 2 shows site photographs of five of the well locations. The results of the geophysical survey are summarized below.

Buried Monitoring Wells

SET detected a few "spot" anomalies near the marked well locations where historic data indicated their presence. SET placed pink circles at those locations where the geophysical data provided responses that were consistent with a possible buried metal object roughly the size of a metal well cap. The site photos presented in Figures 2 and 3 show these locations for MW-1 through MW-5. No photograph of MW-6 was available, however SET did not detect any suspicious anomalies in that survey area. For those locations where no metal anomalies were detected, it may be that the metal well caps were removed during the parking lot construction. PVC wells are extremely difficult to detect.

Data Quality

The data quality for this project was good. The HHEM, RF, and GPR responses at the site were consistent and correlated well between profiles. The interpretations presented in this report are based on observed geophysical responses, visual observations, and historical information.

Closing

The geophysical data collection and interpretation methods used in this investigation are consistent with standard practices applied to similar geophysical investigations. The correlation of geophysical responses is based on the past results of similar surveys, although it is possible that some variation could exist at this site. Due to the nature of geophysical data, no guarantees have been made or inferred regarding the presence or absence of additional objects or targets beyond those identified or beyond the detection limits of the instrumentation used in this investigation.

If you have any questions, please contact me 609-480-9382. It was a pleasure working with you on this project, and look forward to conducting geophysical investigations for you in the future.

Sincerely,

Peter T. Miller PhD, P.G.
Senior Geophysicist, SET

Legend:

⊙ MW Location defined by Dewberry

Notes:

(1) The primary objectives of this geophysical survey were to locate 6 buried wells. To meet the objectives of the investigation, SET used a GPR System 3000 Ground Penetrating Radar (GPR) unit with a 400 MHz antenna, a TW-6 hand held electromagnetic (HHEM) instrument by Fisher, Inc., and a Radiofrequency (RF) device by Radiodetection, Inc. Their approximate locations were marked on the ground by Dewberry prior to the start of the geophysical investigation.

(2) SET detected a few "spot" anomalies near the marked well locations where historic data indicated their presence. SET placed pink circles at those locations where the geophysical data provided responses that were consistent with a possible buried metal object roughly the size of a metal well cap. The site photos presented in Figures 2 and 3 show these locations.

(3) The positions on this map should be considered approximate. They were not surveyed by a licensed surveyor.

(4) The items on this figure may not be all inclusive. SET does not warrant the fact that additional buried features may be present at this site.

Hi,

We are completing a Remedial Action Report for the above references site and request a search for well abandonment records for six historical monitoring wells. The individual well search questionnaires are attached for MW-1, MW-2, MW-3, MW-4, MW-5, and MW-6. The well locations have been paved over, and a geophysical survey did not indicate their presence.

Thank you,

John

Guidance for Damaged, Destroyed, or Lost Wells

In the event that a well has been damaged, destroyed, and/or lost such that it cannot be decommissioned in accordance with Well Construction & Maintenance; Sealing of Abandoned Wells, N.J.A.C. 7:9D Subchapter 3, the property owner or its agent shall contact the Bureau of Water Allocation and Well Permitting (BWAWP) in writing and provide the following information:

1. The name, address, telephone number of the responsible party/property owner for the well;
2. The facility and location information where the well was located including county, township, lot, block, and the known or approximate coordinates;
3. New Jersey Department of Environmental Protection (NJDEP) issued Program Interest ID (PI ID), if applicable;
4. Date when it was discovered that the well was damaged, destroyed, or lost;
5. The approximate date the well was damaged, destroyed, or lost;
6. Circumstances resulting in the well being damaged, destroyed, or lost;
7. Detailed description of the action(s) taken to locate the well in the case of lost wells, or action(s) taken to clear obstruction to facilitate decommissioning in the case of damaged or destroyed wells;
8. Well permit number and well construction specifications, if known. If the well permit number or a copy of the well record is not available, a completed individual well search questionnaire shall be submitted by following the well search directions on the Department's website, which can be located at www.nj.gov/dep/watersupply/pw_permit.html.

Examples of action(s) taken to locate lost wells include, but are not limited to: interviewing the original well driller (if possible), interviewing site employees, metal detection, magnetometer, ground penetrating radar (GPR), obtaining original survey information, Open Public Records Act (OPRA) request of Licensed Site Remediation Professional (LSRP) Form A and Form B, site excavation, etc. As mentioned above, a detailed description of whatever actions were employed must be included in the letter to the BWAWP. Please include photographs, drawings, diagrams, maps, survey data, LSRP reports that contain site details, original correspondence with the Department or any other State, County, or Local agencies, and/or well driller notes in order to document the actions that were taken.

Once the provided information has been received and reviewed, the BWAWP will evaluate the information submitted to make a determination whether additional efforts must be made to locate and decommission the well. If the BWAWP determines that additional actions are needed to facilitate the proper decommissioning of the well, the responsible party/property owner shall undertake actions to determine the condition of the well. Failure to comply with the decommissioning requirements of N.J.A.C. 7:9D-3.1 et seq. is considered a violation of the regulations and subject to enforcement action.

NEW JERSEY VARIATION
SCHEDULE B PART I

ISSUED BY
STEWART TITLE GUARANTY COMPANY

File No.: 2201281

Requirements

All of the following Requirements must be met:

1. The Proposed Insured must notify the Company in writing of the name of any party not referred to in this Commitment who will obtain an interest in the Land or who will make a loan on the Land. The Company may then make additional Requirements or Exceptions.

2. Pay the agreed amount for the estate or interest to be insured.

3. Pay the premiums, fees, and charges for the Policy to the Company.

4. Documents satisfactory to the Company that convey the Title or create the Mortgage to be insured, or both, must be properly authorized, executed, delivered, and recorded in the Public Records.

   a. Deed from: New Jersey Transit Corporation
   to: New Jersey Economic Development Authority

5. A Notice of Settlement to be filed ten (10) days before the settlement date of the proposed transaction, pursuant to N.J.S.A. 46:16a-4.

6. Seller's Affidavit of Title: The Company's standard form of Seller's Affidavit of Title must be executed by the seller(s), without modification or exceptions, at time of closing and provided to this Company. If the seller(s) require that the affidavit be modified or exceptions taken to the statements therein, such modifications or exceptions must be approved by the Company prior to closing and the Company reserves the right to amend this commitment as may be required by such disclosures.

7. Mortgagor's Affidavit of Title: The Company's standard form Mortgagor's Affidavit of Title must be executed by the mortgagor(s), without modification or exceptions, at time of closing and is to be provided to this Company. If the mortgagor(s) require that the affidavit be modified or exceptions taken to the statements therein, such modifications or exceptions must be approved by the Company prior to closing and the Company reserves the right to amend this commitment as may be required by such disclosures.

8. Satisfaction and discharge of record of the following matters:

   a. Due to the nature of the Seller and Buyer andNew Jersey Superior Court and United States District Court Searches were not run.

9. A search of the records of Union County reveals **no open mortgages** at the date of Commitment. Seller's Affidavit of Title must so specify.

This page is only a part of a 2021 ALTA® Commitment for Title Insurance. This Commitment is not valid without the Notice; the Commitment to Issue Policy; the Commitment Conditions; Schedule A; Schedule B, Part I - Requirements; and Schedule B, Part II -Exceptions; and a countersignature by the Company or its issuing agent that may be in electronic form.

Exceptions

Some historical land records contain Discriminatory Covenants that are illegal and unenforceable by law. This Commitment and the Policy treat any Discriminatory Covenant in a document referenced in Schedule B as if each Discriminatory Covenant is redacted, repudiated, removed, and not republished or recirculated. Only the remaining provisions of the document will be excepted from coverage.

The Policy will not insure against loss or damage resulting from the terms and conditions of any lease or easement identified in Schedule A, and will include the following Exceptions unless cleared to the satisfaction of the Company:

1. Any defect, lien, encumbrance, adverse claim, or other matter that appears for the first time in the Public Records or is created, attaches, or is disclosed between the Commitment Date and the date on which all of the Schedule B, Part I - Requirements are met.

2. Rights or claims of parties in possession of the land not shown by the public record.

3. Easements, or claims of easements, not shown by the public record.

4. Encroachments, overlaps, boundary line disputes, or other matters which would be disclosed by an accurate survey and inspection of the premises.

5. Any lien or right to a lien on your title, arising now or later, for labor and material not shown by the public record.

6. Subject to taxes, charges and assessments, if any:

   a. Lien for taxes. Tax Searches **have not been ordered** on these two lots.

7. Terms and Conditions set forth in Memorandum of Lease recorded in Deed Book 3898 page 235, as amended by Amendment of Memorandum of Lease recorded in Deed Book 4507 page 177.

8. Deed of Encroachment to The Township of Cranford as set forth in Deed Book 3276 page 772.

9. Terms, Rights, Easements, and Reservations set forth in Deed Book 3249 page 30; Deed Book 3400 page 779, DeedBook 3252 page 206, Deed Deed Book 3461 page 928.

10. Grant to Buckeye Pipe Line Company, L.P., a Delaware Limited Partnership as set forth in Deed Book 4435 page 220.

11. Grant to the Elizabethtown Water Company, a public utility corporation of the State of New Jersey as set forth in Deed Book 3270 page 95.

12. Security Interest Agreement as set forth in Mortgage Book 9788 page 951.

This page is only a part of a 2021 ALTA® Commitment for Title Insurance. This Commitment is not valid without the Notice; the Commitment to Issue Policy; the Commitment Conditions; Schedule A; Schedule B, Part I - Requirements; and Schedule B, Part II -Exceptions; and a countersignature by the Company or its issuing agent that may be in electronic form.

Richard P. Hatfield
REGISTER

D E E D

THIS DEED made the 15th day of September, 1978, one thousand nine hundred and seventy-eight (1978).

By and Between

CONSOLIDATED RAIL CORPORATION

A corporation organized and existing under the laws of the Commonwealth of Pennsylvania, having an office at Six Penn Center Plaza, Philadelphia, Pennsylvania, 19103, hereinafter referred to as the Grantor

and

THE STATE OF NEW JERSEY

acting by and through
the Commuter Operating Agency of the
New Jersey Department of Transportation

having an office at Market Street and McCarter Highway, Newark, New Jersey, 07101, hereinafter referred to as the Grantee.

WHEREAS, pursuant to the Regional Rail Reorganization Act of

BK 3252 PG 206

COUNTY OF UNION
CONSIDERATION $6,5,934.00
REALTY TRANSFER FEE Exempt
DATE 4/6/81 EW

1973, as amended (the "Rail Act"), the Special United States District Court ("Special Court") ordered conveyance to the Grantor of certain New Jersey rail properties designated in the Final System Plan and certified to the Special Court by the United States Railway Association ("USRA"); and

WHEREAS, certain rail properties conveyed to Grantor were designated for possible acquisition by state and transportation authorities pursuant to Section 206(e)(1)(D) of the Rail Act; and

WHEREAS, specific New Jersey rail properties were designated for possible acquisition by the Grantee pursuant to a resolution of USRA Board of Directors dated March 3, 1976; and

WHEREAS, pursuant to Sections 206(e)(1)(D) and 206(d)(5)(C) of the Rail Act, state and transportation authorities were granted an option for 900 days to acquire the designated rail properties, which option expired on September 18, 1978; and

WHEREAS, pursuant to Public Law No. 95-611, 92 Stat. 3090 (1978), said option period was extended to March 31, 1979; and

WHEREAS, pursuant to Sections 206(e)(1)(D) and 206(d)(5)(C) of the Rail Act, on September 15, 1978 and March 31, 1979, the Grantee exercised its option to acquire certain New Jersey rail properties; and

WHEREAS, the Grantor and Grantee have executed a Memorandum of Understanding dated March 30, 1979, concerning these rail properties;

NOW, THEREFORE, the Grantor, for and in consideration of the

sum of the net liquidation value established by USRA for these rail properties plus additions and betterments, in the amount of SIX HUNDRED FIFTEEN THOUSAND NINE HUNDRED THIRTY FOUR DOLLARS ($615,934.00) lawful money of the United States of America, unto it well and truly paid by the said Grantee, at or before the sealing and delivery of this Deed, the receipt whereof is hereby acknowledged, does by these presents grant, convey, remise, release and forever quitclaim unto the said Grantee, its successors and assigns:

A. All of the Grantor's right, title and interest, legal and equitable, in and to the real property located in the as described in Exhibit A attached to this deed as a part hereof, together with all of the buildings and improvements thereon and together with all of the appurtenances, hereditaments, franchises, ways, waters, minerals, rights, privileges, improvements, fixtures, licenses, leaseholds, reversions, easements, rights under operating, trackage and joint facility agreements, rents, issues, profits and other interests and items belonging to or in any way appertaining to such real property, including but not limited to all real property items that would properly be recorded in Accounts 1 through 15 and 90 of the Property Accounts prescribed by the Interstate Commerce Commission for Rail Companies in its Uniform System of Accounts, 49 C.F.R. Part 1201, to the extent that such interests and items belong or in any way appertain to such real property, except as those interests and

items belong or appertain to the real property hereinafter reserved and excepted.

B. AND TOGETHER WITH the permanent easements and rights to use, operate, maintain, repair, renew and replace any and all existing railroad facilities necessary or useful in the operation of the lines of railroad and premises hereby conveyed which may be located on Grantor's abutting property, together with the easement of reasonable access over Grantor's property to permit the exercise of the foregoing easements and rights.

RESERVING AND EXCEPTING, HOWEVER, TO THE GRANTOR:

C. An Easement previously set forth in Exhibit 3 of the Memorandum of Understanding between the Grantor and Grantee dated March 30, 1979, as follows:

> An easement for the right and license to enter upon and utilize the existing tracks and related operating facilities on the real property conveyed to Grantee for the purpose of performing the Grantor's freight service.
>
> Grantee agrees that Grantor has retained trackage rights for freight operations over real property conveyed to the Grantee pursuant to Section 206(d)(5)(C) and 206(e)(1)(D) of the Regional Rail Reorganization Act of 1973, as amended, 45 U.S.C.A. Section 701 et seq. (the "Act"). These trackage rights are exclusive except to the extent that trackage rights have been provided to third parties pursuant to federal law including but not limited to rights reserved to third parties in the conveyance deeds for these properties which Grantor received from the United States Railway Association ("USRA") as certified by the Special Court pursuant to Section 303(b)(1) of the Act and rights provided to the National Railroad Passenger Corporation in the Off-Corridor Operating Agreement with Conrail executed on April 1, 1976 pursuant to Section 402(a) of the Railroad Passenger Service Act; provided, however, that the Grantee retains its right to use, or permit another party or parties to use, the real property for any purpose, provided that such utilization does not unreasonably interfere with Grantor's trackage

rights and, provided further, that the Grantee's retained right shall be of no force and effect to the extent that it shall have been determined by the USRA, a regulatory body, or a court, subject to a final judicial determination upon timely appeal from a challenge to any such determination, that the trackage rights retained by Grantor are exclusive.

Subject to the foregoing, Grantor's easement shall include the right:

(a) to operate freight trains (including mail and express trains), special trains, cars, locomotives and other on-track equipment;

(b) to occupy and use such portions of stations, buildings and other facilities now upon the real property occupied by Grantor as of the date of this Deed;

(c) to use in conjunction with Grantee the presently existing railroad system telephone cable communications equipment, and facilities now upon the real property (and replacements thereof) and subject to the availability of space in light of the needs of and written approval of Grantee, to construct, operate and maintain such additions to or substitutions for the presently railroad system telephone cable communication equipment and facilities which are reasonably necessary or legally required in connection with the provision of freight service;

(d) to install track connections, with written approval of Grantee, for rail lines and trackage connections now or hereafter owned, leased, controlled or operated by Grantor, contiguous or adjacent to the real property to secure its present or future freight customers or to connect with its rail properties;

(e) to use portions of the maintenance of equipment facilities now upon the real property for the provision of maintenance of equipment service for equipment used in provision of freight service (including mail and express) and special train service;

(f) to have reasonable access over the real property to permit the exercise of the foregoing Easement; and

(g) to assign, transfer or lease any of its right under the Grantor's Easement to third parties with the

consent of Grantee.

The exercise of this Easement and right shall be subject to the following terms, provisions, qualifications and limitations:

(i) the operation of passenger trains shall take preference over the operation of trains operated pursuant to the Grantor's Easement;

(ii) in the event that it shall have been determined, whether by agreement of Grantor and Grantee or by a final decision in an appropriate legal forum, that the Grantee's planned use of the real property unreasonably interferes with Grantor's Easement, the Grantee shall have the option at its sole cost of providing Grantor with a reasonable alternative means of exercising its Easement in which event Grantee's planned use shall be deemed not to interfere with Grantor's Easement;

(iii) the Grantor's exercise of its rights under this Easement shall not unreasonably interfere with the Grantee's use or planned use of the real property; provided, however, that in the event that it shall have been determined, whether by agreement of Grantor and Grantee or by a final decision in an appropriate legal forum, that the Grantor's planned use of the real property unreasonably interferes with Grantee's use or planned use of the real property, the Grantor shall have the option at its sole cost of providing Grantee with a reasonably alternative means of permitting Grantee's utilization or planned utilization of the real property in which event Grantor's planned use shall be deemed not to interfere with Grantee's use or planned use.

(iv) Grantor's rights under the Easement shall terminate as to any portion of the real property in the event that Grantor's contract or common carrier freight service is abandoned or is not utilized for Grantor's freight service for a period of four years.

TO HAVE AND TO HOLD the rail property and the easements and rights hereby conveyed to the Grantee, the successors and assigns

of the Grantee forever, free and clear of any liens or encumbrances insofar as said real property, easements and rights were conveyed to Grantor so free and clear by Grantor's immediate predecessors in title, BUT SUBJECT, HOWEVER, to (i) those easements and rights reserved by the Grantor in Paragraph C above, (ii) the easements and rights reserved and excepted from the conveyance of this real property to the Grantor by the Grantor's immediate predecessors in title; and (iii) all existing easements or agreements of record, public or private, with respect to the real property herein conveyed.

THE GRANTOR HEREBY COVENANTS that the Grantor will perform, execute, acknowledge and deliver any and all such further acts, deeds, assignments and other instruments as may be reasonably requested by the Grantee to convey, confirm, clarify, identify or more precisely described the real property and the easements and rights conveyed by this Deed and to effect the recordation of, or otherwise perfect, this Deed and all such other deeds, assignments and instruments under any applicable statute, ordinance, rule or regulation.

THE GRANTEE HEREBY COVENANTS that the Grantee will perform, execute, acknowledge and deliver any and all such further acts, deeds, assignments and other instruments as may be reasonably requested by the Grantor to confirm, clarify, identify or more precisely described the real property and the easements and rights reserved and excepted from this conveyance or intended so

to be in order to carry out the intent of this Deed and to effect the recordation of, or otherwise perfect, this Deed and all such other deeds, assignments and instruments under any applicable statute, ordinance, rule or regulation.

ALL OF THE COVENANTS of the Grantor and Grantee, respectively, shall be deemed to be real covenants and shall run with the land.

THE words "Grantor" and "Grantee" used herein shall be construed as if they read "Grantors" and "Grantees", respectively, whenever the sense of this instrument so requires and whether singular or plural, such words shall be deemed to include in all cases the successors and assigns of the respective parties.

IN WITNESS WHEREOF, the said Grantor has caused this deed to

be duly executed the day and year first herein written.

EXHIBIT A

To the Deed By and Between

CONSOLIDATED RAIL CORPORATION

and

THE STATE OF NEW JERSEY

The real property described in this Exhibit A was acquired by the State of New Jersey with Title thereto effective as of September 15, 1978.

Maps referred to in the description are on file in the office of New Jersey Transit Corporation, Market Street and McCarter Highway, P.O. Box 10009, Newark, NJ 07101

PERTH AMBOY & WOODBRIDGE BRANCH

Line Code 1423

Union (MP 0.0) to Perth Amboy (MP 5.9)

All that portion of the right-of-way of railroad of Consolidated Rail Corporation known as the Perth Amboy & Woodbridge Branch and identified as Line Code 1423 in the records of the United States Railway Association, situate in the County of Union and the County of Middlesex, State of New Jersey;

Union County

Beginning at the present lateral cut line, near a connection of the said Perth Amboy and Woodbridge Branch with the Northeast Corridor (Main Line; New York to Philadelphia) of National Railroad Passenger Corporation (Amtrak) said lateral cut line is identified as Line Code 1423-0.0 in the records of the United States Railway Association and described as follows:

"Beginning at the point of intersection of the southeastern line of New Brunswick Avenue and the western property line of said railroad; thence North 57° East, a distance of 355 feet, more or less, along with southeastern line of New Brunswick Avenue, to a point; thence southeastwardly 130 feet, more or less, at right angles to the centerline of said branch tracks to a point on the eastern property line of said railroad, on the westerly line of Inman Avenue, the point of ending."

Thence, extending in a general southerly and southeasterly direction to Station 20+10, at the Union County/Middlesex County line;

Being the same property conveyed to Consolidated Rail Corporation on April 1, 1976 by Deed from Fairfax Leary, as Trustee of the Property of The United New Jersey Railroad and Canal Company, Document No. UNJ-CRC-RP-10 (Union County, New Jersey);

Middlesex County;

Thence, continuing the said Perth Amboy & Woodbridge Branch from the Union County/Middlesex County line, in a general southerly and southeasterly direction passing through Woodbridge and Perth Amboy, to the Points of Ending, at Station 311+52 (approximately MP 5.9) on the East bound track and at Station 277+01 on the Westbound track;

Being the same property conveyed to Consolidated Rail Corporation on April 1, 1976 by Deed from Fairfax Leary, as Trustee of the Property of The United New Jersey Railroad and Canal Company, Document No. UNJ-CRC-RP-7 (Middlesex County, New Jersey) and recorded in the Office of Secretary of State on October 12, 1978;

New Jersey Department of Transportation

having an office at Market Street and McCarter Highway, Newark, New Jersey, 07101, hereinafter referred to as the Grantee.

WHEREAS, pursuant to the Regional Rail Reorganization Act of

BOOK 1438 PAGE 523 M 3253 PG 276

1973, as amended (the "Rail Act"), the Special United States District Court ("Special Court") ordered conveyance to the Grantor of certain New Jersey rail properties designated in the Final System Plan and certified to the Special Court by the United States Railway Association ("USRA"); and

WHEREAS, certain rail properties conveyed to Grantor were designated for possible acquisition by state and transportation authorities pursuant to Section 206(e)(1)(D) of the Rail Act; and

WHEREAS, specific New Jersey rail properties were designated for possible acquisition by the Grantee pursuant to a resolution of USRA Board of Directors dated March 3, 1976; and

WHEREAS, pursuant to Sections 206(e)(1)(D) and 206(d)(5)(C) of the Rail Act, state and transportation authorities were granted an option for 900 days to acquire the designated rail properties, which option expired on September 18, 1978; and

WHEREAS, pursuant to Public Law No. 95-611, 92 Stat. 3090 (1978), said option period was extended to March 31, 1979; and

WHEREAS, pursuant to Sections 206(e)(1)(D) and 206(d)(5)(C) of the Rail Act, on September 15, 1978 and March 31, 1979, the Grantee exercised its option to acquire certain New Jersey rail properties; and

WHEREAS, the Grantor and Grantee have executed a Memorandum of Understanding dated March 30, 1979, concerning these rail properties;

NOW, THEREFORE, the Grantor, for and in consideration of the

BOOK 1438 PAGE 524

sum of the net liquidation value established by USRA for these rail properties plus additions and betterments, in the amount of TWO MILLION TWENTY SIX THOUSAND TWO HUNDRED THIRTY-SEVEN DOLLARS ($2,026,237.00) lawful money of the United States of America, unto it well and truly paid by the said Grantee, at or before the sealing and delivery of this Deed, the receipt whereof is hereby acknowledged, does by these presents grant, convey, remise, release and forever quitclaim unto the said Grantee, its successors and assigns:

A. All of the Grantor's right, title and interest, legal and equitable, in and to the real property located in the as described in Exhibit A attached to this deed as a part hereof, together with all of the buildings and improvements thereon and together with all of the appurtenances, hereditaments, franchises, ways, waters, minerals, rights, privileges, improvements, fixtures, licenses, leaseholds, reversions, easements, rights under operating, trackage and joint facility agreements, rents, issues, profits and other interests and items belonging to or in any way appertaining to such real property, including but not limited to all real property items that would properly be recorded in Accounts 1 through 45 and 90 of the Property Accounts prescribed by the Interstate Commerce Commission for Rail Companies in its Uniform System of Accounts, 49 C.F.R. Part 1201, to the extent that such interests and items belong or in any way appertain to such real property, except as those interests and

BOOK 1438 PAGE 525 LIBER 3253 FOLIO 278

items belong or appertain to the real property hereinafter reserved and excepted.

B. AND TOGETHER WITH the permanent easements and rights to use, operate, maintain, repair, renew and replace any and all existing railroad facilities necessary or useful in the operation of the lines of railroad and premises hereby conveyed which may be located on Grantor's abutting property, together with the easement of reasonable access over Grantor's property to permit the exercise of the foregoing easements and rights.

RESERVING AND EXCEPTING, HOWEVER, TO THE GRANTOR:

C. An Easement previously set forth in Exhibit 3 of the Memorandum of Understanding between the Grantor and Grantee dated March 30, 1979, as follows:

> An easement for the right and license to enter upon and utilize the existing tracks and related operating facilities on the real property conveyed to Grantee for the purpose of performing the Grantor's freight service.
>
> Grantee agrees that Grantor has retained trackage rights for freight operations over real property conveyed to the Grantee pursuant to Section 206(d)(5)(C) and 206(e)(1)(D) of the Regional Rail Reorganization Act of 1973, as amended, 45 U.S.C.A. Section 701 et seq. (the "Act"). These trackage rights are exclusive except to the extent that trackage rights have been provided to third parties pursuant to federal law including but not limited to rights reserved to third parties in the conveyance deeds for these properties which Grantor received from the United States Railway Association ("USRA") as certified by the Special Court pursuant to Section 303(b)(1) of the Act and rights provided to the National Railroad Passenger Corporation in the Off-Corridor Operating Agreement with Conrail executed on April 1, 1976 pursuant to Section 402(a) of the Railroad Passenger Service Act; provided, however, that the Grantee retains its right to use, or permit another party or parties to use, the real property for any purpose, provided that such utilization does not unreasonably interfere with Grantor's trackage

BOOK 1438 PAGE 526 M 3253 PG 279

rights and, provided further, that the Grantee's retained right shall be of no force and effect to the extent that it shall have been determined by the USRA, a regulatory body, or a court, subject to a final judicial determination upon timely appeal from a challenge to any such determination, that the trackage rights retained by Grantor are exclusive.

Subject to the foregoing, Grantor's easement shall include the right:

(a) to operate freight trains (including mail and express trains), special trains, cars, locomotives and other on-track equipment;

(b) to occupy and use such portions of stations, buildings and other facilities now upon the real property occupied by Grantor as of the date of this Deed;

(c) to use in conjunction with Grantee the presently existing railroad system telephone cable communications equipment and facilities now upon the real property (and replacements thereof) and subject to the availability of space in light of the needs of and written approval of Grantee, to construct, operate and maintain such additions to or substitutions for the presently railroad system telephone cable communication equipment and facilities which are reasonably necessary or legally required in connection with the provision of freight service;

(d) to install track connections, with written approval of Grantee, for rail lines and trackage connections now or hereafter owned, leased, controlled or operated by Grantor, contiguous or adjacent to the real property to secure its present or future freight customers or to connect with its rail properties;

(e) to use portions of the maintenance of equipment facilities now upon the real property for the provision of maintenance of equipment servier for equipment used in provision of freight service (including mail and express) and special train service;

(f) to have reasonable access over the real property to permit the exercise of the foregoing Easement; and

(g) to assign, transfer or lease any of its right under the Grantor's Easement to third parties with the

consent of Grantee.

The exercise of this Easement and right shall be subject to the following terms, provisions, qualifications and limitations:

(i) the operation of passenger trains shall take preference over the operation of trains operated pursuant to the Grantor's Easement;

(ii) in the event that it shall have been determined, whether by agreement of Grantor and Grantee or by a final decision in an appropriate legal forum, that the Grantee's planned use of the real property unreasonably interferes with Grantor's Easement, the Grantee shall have the option at its sole cost of providing Grantor with a reasonable alternative means of exercising its Easement in which event Grantee's planned use shall be deemed not to interfere with Grantor's Easement;

(iii) the Grantor's exercise of its rights under this Easement shall not unreasonably interfere with the Grantee's use or planned use of the real property; provided, however, that in the event that it shall have been determined, whether by agreement of Grantor and Grantee or by a final decision in an appropriate legal forum, that the Grantor's planned use of the real property unreasonably interferes with Grantee's use or planned use of the real property, the Grantor shall have the option at its sole cost of providing Grantee with a reasonably alternative means of permitting Grantee's utilization or planned utilization of the real property in which event Grantor's planned use shall be deemed not to interfere with Grantee's use or planned use.

(iv) Grantor's rights under the Easement shall terminate as to any portion of the real property in the event that Grantor's contract or common carrier freight service is abandoned or is not utilized for Grantor's freight service for a period of four years.

TO HAVE AND TO HOLD the rail property and the easements and rights hereby conveyed to the Grantee, the successors and assigns

BOOK 1438 PAGE 528 M3253TC 281

of the Grantee forever, free and clear of any liens or encumbrances insofar as said rail property, easements and rights were conveyed to Grantor so free and clear by Grantor's immediate predecessors in title, BUT SUBJECT, HOWEVER, to (i) those easements and rights reserved by the Grantor in Paragraph C above, (ii) the easements and rights reserved and excepted from the conveyance of this real property to the Grantor by the Grantor's immediate predecessors in title; and (iii) all existing easements or agreements of record, public or private, with respect to the real property herein conveyed.

THE GRANTOR HEREBY COVENANTS that the Grantor will perform, execute, acknowledge and deliver any and all such further acts, deeds, assignments and other instruments as may be reasonably requested by the Grantee to convey, confirm, clarify, identify or more precisely described the real property and the easements and rights conveyed by this Deed and to effect the recordation of, or otherwise perfect, this Deed and all such other deeds, assignments and instruments under any applicable statute, ordinance, rule or regulation.

THE GRANTEE HEREBY COVENANTS that the Grantee will perform, execute, acknowledge and deliver any and all such further acts, deeds, assignments and other instruments as may be reasonably requested by the Grantor to confirm, clarify, identify or more precisely described the real property and the easements and rights reserved and excepted from this conveyance or intended so

to be in order to carry out the intent of this Deed and to effect the recordation of, or otherwise perfect, this Deed and all such other deeds, assignments and instruments under any applicable statute, ordinance, rule or regulation.

ALL OF THE COVENANTS of the Grantor and Grantee, respectively, shall be deemed to be real covenants and shall run with the land.

THE words "Grantor" and "Grantee" used herein shall be construed as if they read "Grantors" and "Grantees", respectively, whenever the sense of this instrument so requires and whether signular or plural, such words shall be deemed to include in all cases the successors and assigns of the respective parties.

IN WITNESS WHEREOF, the said Grantor has caused this deed to

be duly executed the day and year first herein written.

FAIRFAX LEARY,

AS TRUSTEE OF THE PROPERTY OF

THE UNITED NEW JERSEY RAILROAD AND CANAL COMPANY, DEBTOR

("Grantor"), whose address is 1404 Mt. Pleasant Road, Villanova, Pennsylvania 19085

AND

CONSOLIDATED RAIL CORPORATION,

a corporation organized and existing under the laws of the Commonwealth of Pennsylvania ("Grantee"), whose address is 1818 Market Street, Philadelphia, Pennsylvania 19103.

WHEREAS, the Debtor is a railroad in reorganization under Section 77 of the Federal Bankruptcy Act, 11 U.S.C. Sec. 205, and is a railroad in reorganization as that term is defined in the Regional Rail Reorganization Act of 1973 (Public Law 93-236, 87 Stat. 985), as amended ("Act"); and

WHEREAS, by orders of the United States District Court for the Eastern District of Pennsylvania entered in Docket No. 70-347-A the above-named individual was duly appointed and is now serving as Trustee of the property of the Debtor; and

WHEREAS, the United States Railway Association, pursuant to Section 209 (c) of the Act, has certified to the Special United States District Court established pursuant to Section 209 (b) of the Act ("Special Court"), that the rail properties of the Debtor hereinafter described (except those hereinafter reserved and excepted) are to be transferred by the Grantor to the Grantee; and

WHEREAS, pursuant to Section 303 (b) (1) of the Act, the Special Court has ordered the Grantor to convey to the Grantee all of the Grantor's right, title and interest in such rail properties, free and clear of any liens or encumbrances as provided in Section 303 (b) of the Act;

NOW, THEREFORE, pursuant to the Order of the Special Court, the Grantor hereby grants and conveys to the Grantee:

A. All of the Grantor's right, title and interest, legal and equitable, in and to the real property located in the

County of Union, State of New Jersey

as described in Exhibit A attached to this Deed as a part hereof, together with all of the appurtenances, hereditaments, franchises, ways, waters, minerals, rights, privileges, improvements, fixtures, licenses, leaseholds, reversions, easements, rights under operating, trackage and joint facility agreements, rents, issues, profits and other interests and items belonging to or in any way appertaining to such real property, including but not limited to all real property items that would properly be recorded in Accounts 1 through 45 and 90 of the Property Accounts prescribed by the Interstate Commerce Commission for Railroad Companies in its Uniform System of Accounts, 49 C.F.R. Part 1201, to the extent that such interests and items belong or in any way appertain to such real property, except as those interests and items belong or appertain to the real property hereinafter reserved and excepted.

B. 1. The easements and rights to use, operate, maintain, repair, renew, replace and remove on, under, over and across the real property hereinafter reserved and excepted ("Grantor's Burdened Property"), any and all lines, poles, pipes, appliances, equipment, structures, facilities and appurtenances (each an "Easement Item") existing on and used or useful as of the date of delivery of this Deed as a part of any railroad communication, signal or interlocker system or as a part of any electric, telephone, telegraph, water, gas, steam, sanitary sewer, storm sewer or other utility system, together with the easement of reasonable access over the Grantor's Burdened Property to permit the exercise of the foregoing easements and rights, and the easement for lateral support of the real property conveyed by this Deed.

2. The easements and rights for the specific uses, if any, (each an "Easement Item") particularly described in Exhibit B attached to this Deed as a part hereof and burdening certain real property hereinafter reserved and excepted.

3. The Grantee shall give the Grantor reasonable notice before entering on the Grantor's Burdened Property to exercise the easements and rights conveyed in this Paragraph B, and shall exercise such easements and rights (a) so as not to interfere unreasonably with the use and enjoyment of the Grantor's Burdened Property, (b) in compliance with generally applicable reasonable requirements established from time to time by the Grantor and (c) so as not to increase materially the burden on the Grantor's Burdened Property existing on the date of delivery of this Deed. The Grantee shall indemnify and save the Grantor harmless from any loss, damage or expense arising from the exercise of the foregoing easements and rights, without regard to negligence on the part of the Grantor or the Grantee. Upon request of and at the expense of the Grantor, the Grantee shall execute and deliver to the Grantor a deed or other instrument releasing the Grantee's rights in any part of the Grantor's Burdened Property that is not used or reasonably needed by the Grantee in the exercise of the easements and rights conveyed in this Paragraph B.

4. If the location of any Easement Item would interfere with any proposed use or sale of any part of the Grantor's Burdened Property, the Grantor may, at the Grantor's expense and after obtaining the Grantee's written consent, relocate the interfering Easement Item or cause the same to be relocated. Such consent will be granted unless (a) the Easement Item cannot be relocated as proposed by the Grantor without unreasonable interference to the Grantee's operations or without damage to the integrity of the system of which the Easement Item is a part or (b) the Grantee will not have reasonable access to the relocated Easement Item. If the Grantee has previously released its easements and rights in any real property as provided in Paragraph B. 3. and a relocated Easement Item falls, in whole or in part, within the area that has been so released, the Grantor and the Grantee shall exchange the following instruments promptly after the relocation is completed:

(a) The Grantor shall execute and deliver to the Grantee a supplementary deed of easement which conveys to the Grantee with respect to the relocated Easement Item the easements and rights described in this Paragraph B.

(b) The Grantee shall execute and deliver to the Grantor a deed or other instrument of release as provided in Paragraph B. 3.

5. The Grantor shall bear all expenses and the cost of all transfer and recording taxes, fees and charges in connection with all deeds and other instruments delivered pursuant to this Paragraph B.

RESERVING AND EXCEPTING, HOWEVER, TO THE GRANTOR:

C. All the respective right, title and interest of the Grantor, legal and equitable, in and to the real property described in Exhibit B attached to this Deed as a part hereof, but subject, however, to (a) the limitation of access thereto across the real property conveyed by this Deed as hereinafter provided and (b) the easements and rights conveyed pursuant to Paragraph B above.

D. 1. The easements and rights to use, operate, maintain, repair, renew, replace and remove on, under, over and across the real property conveyed by this Deed ("Grantee's Burdened Property"), any and all lines, poles, pipes, appliances, equipment, structures, facilities and appurtenances (each an "Easement Item") existing on and used or useful as of the date of delivery of this Deed as a part of any railroad communication, signal or interlocker system or as a part of any electric, telephone, telegraph, water, gas, steam, sanitary sewer, storm sewer or other utility system, together with the easement of reasonable access over the Grantee's Burdened Property to permit the exercise of the foregoing easements and rights, and the easement for lateral support of the real property reserved and excepted from this conveyance.

2. The easements and rights for the specific uses, if any, (each an "Easement Item") particularly described in Exhibit B to this Deed and burdening certain real property conveyed by this Deed.

3. The Grantor shall give the Grantee reasonable notice before entering on the Grantee's Burdened Property to exercise the easements and rights reserved and excepted in this Paragraph D, and shall exercise such easements and rights (a) so as not to interfere unreasonably with the use and enjoyment of the Grantee's Burdened Property, (b) in compliance with generally applicable reasonable requirements established from time to time by the Grantee and (c) so as not to increase materially the burden on the Grantee's Burdened Property existing on the date of delivery of this Deed. The Grantor shall indemnify and save the Grantee harmless from any loss, damage or expense arising from the exercise of the foregoing easements and rights, without regard to negligence on the part of the Grantee or the Grantor. Upon request of and at the expense of the Grantee, the Grantor shall execute and deliver to the Grantee a deed or other instrument releasing the Grantor's rights in any part of the Grantee's Burdened Property that is not used or reasonably needed by the Grantor in the exercise of the easements and rights reserved and excepted in this Paragraph D.

4. If the location of any Easement Item would interfere with any proposed use or sale of any part of the Grantee's Burdened Property, the Grantee may, at the Grantee's expense and after obtaining the Grantor's written consent, relocate the interfering Easement Item or cause the same to be relocated. Such consent will be granted unless (a) the Easement Item cannot be relocated as proposed by the Grantee without unreasonable interference to the Grantor's operations or without damage to the integrity of the system of which the Easement Item is a part or (b) the Grantor will not have reasonable access to the relocated Easement Item. If the Grantor has previously released its easements and rights in any real property as provided in Paragraph D. 3. and a relocated Easement Item falls, in whole or in part, within the area that has been so released, the Grantor and the Grantee shall exchange the following instruments promptly after the relocation is completed:

(a) The Grantee shall execute and deliver to the Grantor a supplementary deed of easement which conveys to the Grantor with respect to the relocated Easement Item the easements and rights described in this Paragraph D.

(b) The Grantor shall execute and deliver to the Grantee a deed or other instrument of release as provided in Paragraph D. 3.

5. The Grantee shall bear all expenses and the cost of all transfer and recording taxes, fees and charges in connection with all deeds and other instruments delivered pursuant to this Paragraph D.

E. All mineral rights owned by the Grantor in any parcel as to which an interest in the surface is not conveyed by this Deed.

TO HAVE AND TO HOLD the real property and the easements and rights hereby conveyed to the Grantee, free and clear of (a) any liens or encumbrances as provided in Section 303 (b) of the Act and (b) any and all easements and rights of access to the real property reserved and excepted from this conveyance across the real property conveyed by this Deed (except as otherwise provided in this Deed), even if such easements and rights would otherwise arise by reason of necessity, implication or other operation of law, statute, ordinance, rule or regulation of any governmental entity, BUT SUBJECT, HOWEVER, to (i) those easements and rights reserved and excepted in Paragraph D above, (ii) all existing licenses, easements, leases (other than those which may have been created to secure payment of a financial obligation), and operating, trackage right and joint facility agreements and (iii) Operating Rights Grants, if any, from the Grantor to a third party conveyed concurrently with this conveyance and identified in Exhibit B to this Deed.

The Grantor hereby covenants that the Grantor will perform, execute, acknowledge and deliver any and all such further acts, deeds, assignments and other instruments as may be reasonably requested by the Grantee to convey, confirm, clarify, identify or more precisely describe the real property and the easements and rights conveyed by this Deed or intended so to be in order to carry out the intent of this Deed in light of the designations contained in the Final System Plan which has been certified to the Special Court by the United States Railway Association pursuant to the Act, and to effect the recordation of, or otherwise perfect, this Deed and all such other deeds, assignments and instruments under any applicable statute, ordinance, rule or regulation.

The Grantee hereby covenants that the Grantee will perform, execute, acknowledge and deliver any and all such further acts, deeds, assignments and other instruments as may be reasonably requested by the Grantor to confirm, clarify, identify or more precisely describe the real property and the easements and rights reserved and excepted from this conveyance or intended so to be in order to carry out the intent of this Deed in light of the designations contained in such Final System Plan, and to effect the recordation of, or otherwise perfect, this Deed and all such other deeds, assignments and instruments under any applicable statute, ordinance, rule or regulation.

By acceptance of this Deed, the Grantee (a) agrees to perform each of the obligations imposed on the Grantee by the terms of this Deed, and (b) assumes and agrees to perform and observe all obligations and conditions on the part of the Grantor or the Grantor's predecessor in title to be performed or observed that arise or accrue after the date of delivery of this Deed under all licenses, easements, leases (other than those which may have been created to secure payment of a financial obligation) and operating, trackage right and joint facility agreements (subject, however, to the terms thereof) which are conveyed by this Deed and under those to which this conveyance is made subject, provided that the Grantee assumes no obligation or liability that arises after the date of delivery of this Deed out of any event, act or failure to act that occurred prior thereto and, where an obligation or liability is related to a period which is both before and after such date, the Grantee assumes only that portion of the obligation or liability which is reasonably allocable to the part of the period after such date. Concurrently with the delivery of this Deed, the Grantee is delivering to the Grantor a separate instrument executed by the Grantee acknowledging receipt and acceptance of this Deed and affirming the provisions of this paragraph.

All of the covenants of the Grantor and the Grantee, respectively, shall be deemed to be real covenants and shall run with the land.

The words "Grantor" and "Grantee" used herein shall be construed as if they read "Grantors" and "Grantees", respectively, whenever the sense of this Deed so requires and, whether singular or plural, such words shall be deemed to include in all cases the successors and assigns of the respective parties.

This conveyance and the specific covenants of the Grantor are made by the Grantor as Trustee of the property of the Debtor, and not individually, and this conveyance is made without covenants of title or any warranties express or implied.

IN WITNESS WHEREOF, the Grantor has executed this Deed this 31st day of March, 1976.

DEED OF EASEMENT

THIS DEED AGREEMENT, made this 12th day of August, 1981, by and between the National Railroad Passenger Corporation with offices at 400 North Capitol Street, N.W., Washington, D.C. 20001, a District of Columbia corporation (hereinafter "Grantor") and the Elizabethtown Water Company, a public utility corporation of the State of New Jersey with offices at One Elizabethtown Plaza, Elizabeth, New Jersey 07207 (hereinafter "Grantee"),

WITNESSTH that, in consideration of the sum of Seven Thousand Five Hundred Dollars ($7,500.00) and the further sum of Five Hundred Dollars ($500.00) as a document preparation fee, and other good and valuable consideration, the receipt whereof is hereby acknowledged, the Grantor does hereby grant and confirm to the Grantee for the installation and maintenance of a forty-eight inch (48") sub-surface water main and for no other use or purpose whatsoever, a perpetual easement over all that certain parcel of land situate adjoining the Grantor's right-of-way in the City of Linden, County of Union and State of New Jersey more particularly described as follows:

BEGINNING in the southwesterly line of Wood Avenue, South at a point therein distant 137.55 feet measured northwesterly along the aforesaid southwesterly line of Wood Avenue, South from its intersection with the northwesterly line of Linden Avenue, West and from said beginning point running; thence (1) south 34 degrees 48 minutes 48 seconds west a distance of 247.03 feet to a point in the southeasterly line of land of Amtrak; thence (2) south 48 degrees 05 minutes west along the aforesaid southeasterly line of Amtrak a distance of 9.64 feet to a point in the northeasterly line of Penn Place said point being 80.0 feet measured northwesterly along the aforesaid northeasterly line of Penn Place from its intersection with the aforementioned northwesterly line of Linden Avenue, West; thence (3) north 41 degrees 55 minutes west along the aforesaid northwesterly line of Penn Place a distance of 18.274 feet to a point; thence (4) north 34 degrees 48 minutes 48 seconds east parallel with and 20.0 feet northwesterly measured at right angles to the first course of this description a distance of 254.17 feet to a point in the aforementioned southwesterly line of Wood Avenue, South; thence (5) South 49 degrees 38 minutes east along the aforesaid southwesterly line of Wood Avenue, South a distance of 20.09 feet to the point and place of beginning.

Containing 5,100 square feet or 0.1171 acres all as more particularly shown in yellow outline on the plan designated Exhibit "A" attached hereto and made a part hereof.

Reservations, Exceptions and Conditions:

1. That Grantor, its employees, agents, servants, contractors, invitees, licensees, and the like at any and all times shall have the right to move engines and railroad cars over and across Grantor's adjoining right-of-way, together with the right to maintain the said right-of-way as now constructed, or as may be hereafter constructed, with the further right at any and all

times to enter upon said premises for the purpose of operating, maintaining, repairing or replacing, relocating, removing and renewing said right-of-way or any improvements thereon; (1)

2. That Grantor shall not be liable to Grantee or its employees, servants, agents, contractors, licensees, invitees or the like for any loss, injury, damage or impairment which may occur to the person or property of any of them while on or about the said premises; (2)

3. That Grantee shall reimburse, compensate and pay Grantor the costs, damages, and losses of any kind whatsoever to Grantor's railroad right-of-way, its improvements and appurtenances, arising or resulting directly or indirectly from any use, construction, enjoyment or occupation under this easement, including, but not limited to, vehicle collisions, fires, transportation of flammable or explosive commodities or fluid drainage on or over said easement; (3)

4. That Grantee shall be responsible for, and will indemnify, save harmless and defend Grantor against and from any and all claims and suits for, and any and all liability, loss or expense arising from, or incidental to, or in connection with, damage to, or loss of any property of Grantor, Grantee, the agents, servants, licensees, contractors, invitees or employees of either, or any other person and indemnify against and from any and all claims and suits for, any and all liability, loss or expense arising out of, or incidental to or in connection with injury to or death of persons, including agents, servants, contractors, licensees, invitees or employees of Grantor or Grantee, or any other person, if said damage, loss, injury, or death shall arise in any manner, directly or indirectly, out of, or incidental to, or in connection with the granting of this easement or the use or occupation thereof, including any appurtenant walkways, curbs or gutters; (4)

5. That Grantee shall, at its sole cost and expense procure, provide, and deliver to the Railroad and thereafter maintain in effect for the duration of this easement, public liability insurance, as well as contractual liability insurance covering all liabilities assumed by the Grantee hereunder, without exception or restriction of any kind. Said insurance shall be in limits of not less than Two Million Dollars ($2,000,000.00) single limit, bodily injury, death and/or property damage whether of the Grantee, the Railroad, or others, and shall contain a waiver of subrogation against Railroad, and said insurance shall be with such companies and in such form as shall be acceptable to the Railroad. Said insurance shall be endorsed to provide that the Railroad will be notified in writing by the insurance carrier at least thirty (30) days in advance of any cancellation or changes which modify the coverage provided thereunder. The providing of such insurance shall not be deemed a limitation on the liability of Grantee as provided herein, but shall be additional security therefor. (5)

Grantee shall have the right to self insure, to fulfill its obligations under this Article, in lieu of procuring and maintaining the above mentioned insurance policies. (5.1)

6A. That Grantor shall not be liable or obligated to assume or pay any assessments, costs, charges or expenses in connection with the construction, re-construction, use, maintenance or renewal of said water main, appurtenances or facilities necessary thereto, affecting or benefitting in any way any land of said Grantor;

6B. That Grantor shall have the unlimited right to use the land hereinbefore described in any manner whatsoever, provided that such usage does not interfere in any way with the easement rights herein granted;

6C. That in the event said 48-inch water main and appurtenant facilities are hereafter assessed for any levy or taxes, the Grantee shall and will assume and pay all such levies or taxes on the said 48-inch water main and appurtenant facilities directly to the proper taxing authority imposing such taxes;

6D. That said Grantor shall have the right to make any direct connection to said 48-inch water main and appurtenant facilities in accordance with Grantee's normal and standard regulations, or have the right to have a smaller size water line installed to service Grantor's property, all at Grantee's sole cost and expense;

6E. That Grantee shall, upon final installation of said 48-inch water main, restore the surface of the aforementioned premises to their pre-existing condition including, but not limited to, proper grading and drainage as well as asphalt covering, all at the sole cost and expense of the Grantee, and within 30 days of commencing construction.

7. That Grantee, prior to any construction work, repairs or improvements to the premises, shall give thirty (30) days' prior written notice to, and shall submit plans and specifications to Railroad and obtain the written approval thereof by the Chief Engineer of Railroad before any work or alteration of the premises is performed; except that the thirty day notice to Grantor shall not be required for emergency repairs and minor repairs to the roadway surface; (7)

8. That Grantee, in the event this easement shall terminate for any reason, shall restore the land to its former condition upon the option of the Grantor, including, but not limited to, leveling and filling the earth, removing barricades and fences, and shoring up the railroad right-of-way if the right-of-way or any improvements thereon or appurtenances thereto have been weakened or damaged as a direct or indirect result of any use of said easement; (8)

9. That Grantee shall, at its sole cost and expense, make necessary repairs to the premises for its proper upkeep and maintenance and will keep

the area of the easement in constant good order, repair and safe condition, including, but not limited to open areas, landscaping, drainage, pavement, and sidewalks or walkways thereon; (9)

10. That Grantee shall at its sole cost and expense arrange for, and procure necessary electricity, water or other utility service required for Grantee's use; (10)

11. That Grantee shall not assign, transfer, sell or otherwise attempt to convey or encumber this easement, or any part of said premises, without the prior written consent of Grantor; (11)

12. That any failure, omission, neglect or dereliction by Grantee in complying with the Reservations, Exceptions and Conditions herein contained shall be sufficient justification for Grantor at Grantor's sole discretion and in accordance with any terms or conditions it may establish, to terminate and determine the easement granted hereunder; (12)

13. That the Reservations, Exceptions and Conditions hereunder shall run with the land and inure to the benefit of Grantor, its successors and assigns binding and obligating Grantee its successors and assigns, for as long as the premises shall be subject to this easement, provided, however, that if the premises described herein shall be utilized or occupied for any other purpose than incident to supplying the City of Newark with water then this easement shall immediately cease, terminate and expire; (13)

14. That any notice or communication required to be given hereunder shall be deemed sufficiently served or rendered to Grantee if, in writing, delivered or sent by registered or certified mail to Grantee addressed to Norbert Wagner - Chief Engineer, Elizabethtown Water Company, P. O. Box 111, Plainfield, New Jersey 07061 or such other address as Grantee shall designate by written notice; provided however, that any notice or communication required hereunder from Grantee to Grantor must be served by registered or certified mail addressed to the National Railroad Passenger Corporation, 400 North Capitol Street, N. W., Washington, D.C. 20001, attention: Real Estate Department, or at such address as Grantor may designate by written notice; (14)

15. That no termination or expiration of this agreement shall obligate Grantor to refund any portion of the consideration or compensation paid by Grantee for the granting of this easement; (15)

IN WITNESS WHEREOF, the parties hereto freely have set their hands and affixed their seals in execution hereof, as of the day and year first above written.

Date:

PERMIT TO ENTER UPON PROPERTY

File:

PERMISSION is hereby granted to Elizabethtown Water Company with offices at One Elizabethtown Plaza, Elizabeth, New Jersey hereinafter called "Permittee" to enter property of the National Railroad Passenger Corporation, hereinafter called "Railroad", for the purpose of water main construction in the City of Linden, in the County of Union and State of New Jersey under the following terms and conditions:

1. LOCATION AND ACCESS.

FIRST - Beginning in the southwesterly line of Wood Avenue, south at a point therein distant 158.04 feet measured northwesterly along the aforesaid southwesterly line of Wood Avenue, south from its intersection with the northwesterly line of Linden Avenue, west and from said beginning point running; thence (1) south 34 degrees 48 minutes 48 seconds west a distance of 254.17 feet to a point in the northeasterly line of Penn Place said point being 98.274 feet measured northwesterly along the aforesaid northeasterly line of Penn Place from its intersection with the aforementioned northwesterly line of Linden Avenue, West; thence (2) north 41 degrees 55 minutes west along the aforesaid northeasterly line of Penn Place a distance of 10.274 feet to a point; thence (3) north 34 degrees 48 minutes 48 seconds east parallel with and 10.0 feet northeasterly measured at right angles to the first course of this description a distance of 252.78 feet to a point in the aforementioned southwesterly line of Wood Avenue, south; thence (4) south 49 degrees 38 minutes east along the aforesaid southwesterly line of Wood Avenue, south a distance of 10.074 feet to the point and place of beginning.

Containing 2,535 square feet or 0.0582 acres, and

SECOND - BEGINNING in the southwesterly line of Wood Avenue, South at a point therein distant 100.0 feet measured northwesterly along the aforesaid southwesterly line of Wood Avenue, south from its intersection with the northwesterly line of Linden Avenue, west and from said beginning point running; thence (1) south 40 degrees 28 minutes 21 seconds west along the southeasterly line of land of Amtrak a distance of 156.55 feet to a point; thence (2) north 41 degrees 55 minutes west a distance of 1.64 feet to a point; thence (3) south 48 degrees 05 minutes west still along the lands of Amtrak a distance of 90.36 feet to a point; thence (4) north 34 degrees 48 minutes 48 seconds east a distance of 247.03 feet to a point in the aforementioned

southwesterly line of Wood Avenue, south; thence (5) south 49 degrees 38 minutes east along the aforesaid southwesterly line of Wood Avenue, South a distance of 37.95 feet to the point and place of beginning.

Containing 5,656 square feet or 0.1298 acres.

2. LIABILITY. Permittee shall indemnify, defend and save harmless the Railroad from and against any and all detriment, damages, losses, claims, demands, suits, costs or expenses which the Railroad may suffer or sustain or be subject to, directly or indirectly, caused either wholly or in part by reason of work performed on the Railroad's property by Permittee and/or its contractor.

3. CONSIDERATION. ~~Permittee will pay to the Railroad the sum of One Hundred Dollars ($100.00) as a compensation for the preparation of this permit, payable in advance upon execution of this permit.~~

4. STARTING OF USE OF PROPERTY. Permitee or its contractor shall notify the Chief Engineer of the Railroad, or his designee, at least seven (7) days in advance before entering upon or starting any work upon Railroad property. No entry or use of Railroad property will be permitted until this permit is signed, charges thereunder paid, and permission received from the Chief Engineer's designee who will be A. C. Erickson located at Suburban Station, Philadelphia. Telephone number 215-895-7505.

5. RAILROAD OPERATIONS. All operations shall be carried on in such a manner so as not to interfere with Railroad property and operation or the use of any Railroad Facilities. If, in the opinion of the Chief Engineer of the Railroad, or his designee, conditions warrant at any time, the Railroad will provide flag service and protection at the expense of the Permittee, and Permittee agrees to pay to the Railroad the full cost and expense therefor.

6. CROSSING TRACK. In no event shall Employees, equipment or material cross a track or tracks without special permission and with at least notice of forty eight (48) hours in advance, so that the Railroad may arrange for the necessary flag protection at the expense of the Permittee and Permittee agrees to pay to the Railroad the full cost and expense therefor. Such permission shall be obtained from the Chief Engineer of the Railroad or his designee.

7. CLEARANCES. All equipment working on or material in use upon the property of the Railroad shall be kept at all times not less than ten (10) feet from the nearest rail of any mainline track, or as subsequently modified in writing by the Chief Engineer or his designee. The Permittee and/or its contractor shall conduct its operations so that no part of its equipment shall foul an operated track, transmission, signal or communication lines, or any other structure of the Railroad.

29 03 122

8. RESTORATION OF PREMISES. Upon completion of the work, the Railroad's property shall be left in a condition satisfactory to the Railroad. This includes, without limitation, the restoration immediately of any fences removed.

9. TERM OF PERMIT. The Railroad reserves the right to revoke this permit at any time. Unless subsequently modified, this permit shall extend thirty (30) days from the date construction of said water main commences at which time it shall expire automatically. The Permittee agrees to notify the Railroad when use of the property or work is completed. Under no circumstances shall this temporary permit be construed as granting the Permittee any right, title or interest of any kind or character in, on or about the land or premises of the Railroad.

10. (a) INSURANCE. Before any work is started on Railroad property, Permittee or his contractor shall furnish the Chief Engineer of the Railroad, or his designee, with evidence of its Workmen's Compensation, Public Liability and Property Damage Coverages, as specified in Sections 1, 2, and 3 of the attached addendum entitled "MAINTENANCE AND PROTECTION OF RAILROAD TRAFFIC".

11. This permit shall be subject to the execution of a lease agreement between Permittee and the Railroad within 20 days of the date of execution hereof.

To confirm your acceptance of the above conditions, please return one signed copy of this permit to this office at National Railroad Passenger Corporation, Attn: Real Estate Department, 400 North Capitol Street, N.W., Washington, D.C. 20001. The second copy may be retained for your file.

INSURANCE REQUIREMENTS

In addition to any other forms of insurance or bonds required under the terms of the contract and specifications, the contractor will be required to carry insurance of the following kinds and amounts:

1. Contractor's Public Liability and Property Damage Liability Insurance

The contractor shall furnish evidence to the (State, City or as the case may be) that, with respect to the operations he performs, he carries regular contractor's public liability insurance providing for a limit of not less than two million ($2,000,000) dollars for all damages arising out of bodily injuries to or death of one person, and subject to that limit for each person, a total limit of two million ($2,000,000) dollars for all damages arising out of bodily injuries to or death of two or more persons in any one accident, and regular contractor's property damage liability insurance providing for a limit of not less than two million ($2,000,000) dollars for all damages arising out of an injury to or destruction of property in any one accident and, subject to that limit per accident, a total (or aggregate) limit to two million ($2,000,000) dollars for all damages arising out of injury to or destruction of property during the policy period.

If any part of the work is sublet, similar insurance shall be provided by or in behalf of the subcontractors to cover their operations.

2. Contractor's Protective Public Liability and Property Damage Liability Insurance

The contractor shall furnish evidence to the (State, City, or as the case may be) that, with respect to the operations performed for him by subcontractors, he carries in his own behalf regular contractor's protective public liability insurance providing for a limit of not less than two million ($2,000,000) dollars for all damages arising out of bodily injuries to or death of one person, and, subject to that limit for each person, a total limit of two million ($2,000,000) dollars for all damages arising out of bodily injuries to or death of two or more persons in any one accident, and regular contractor's protective property

damage liability insurance providing for a limit of not less than two million ($2,000,000) dollars for all damages arising out of injury to or destruction of property in any one accident and, subject to that limit per accident a total (or aggregate) limit of two million ($2,000,000) dollars for all damages arising out of injury to or destruction of property during the policy period.

3. Railroad Protective Liability and Property Damage Liability Insurance

In addition to the above, the contractor shall furnish evidence that, with respect to the operations he or any of his subcontractors perform, he has provided Railroad Public Liability Insurance (AAR-AASHTO Form) in the name of National Railroad Passenger Corporation and Consolidated Rail Corporation providing for a limit of not less than $2,000,000 single limit, bodily injury, for damages arising out of injuries to, or death of, all persons in any one occurrence and $2,000,000 single limit, property damage for damage to, or destruction of, property, including the loss of use thereof, in any one occurrence. No aggregate shall apply for either bodily injury or property damage.

The insurance hereinbefore specified shall be carried until all work required to be performed under the terms of the contract is satisfactorily completed as evidenced by the formal acceptance by the Chief Engineer of Amtrak. Failure to carry or keep such insurance in force until all work is satisfactorily completed shall constitute a violation of the contract.

The contractor shall furnish to the railroad company signed copy of the policy for contractor's public liability and property damage liability insurance, also signed copy of the policy for railroad protective public liability and property damage liability insurance prior to entry upon railroad right-of-way. If any work is subcontracted, the contractor shall furnish signed copy of the policy for contractor's protective public liability and property damage liability insurance.

All certificates shall be endorsed to provide 10 days notice to Amtrak by the insurance company before any change in or cancellation of the policies.

DEED OF ENCROACHMENT EASEMENT AND NON-EXCLUSIVE RIGHT OF WAY

Richard P. Hatfield
RECEIVED & RECORDED
UNION COUNTY, N.J.
JAN 11 11 45 AM '82
3276 772

This Deed of Easement is made by and between

The State of New Jersey
acting by and through the New Jersey Transit Corporation (Grantor), with an address at Market Street and McCarter Highway, Newark, New Jersey

AND

The Township of Cranford,
County of Union, State of New Jersey (Grantee),
with address at 8 Springfield Avenue, Cranford, New Jersey

Whereas, the Grantor is the owner in fee simple of certain railway property situate in the Township of Cranford, County of Union and State of New Jersey, said property formerly being owned by the Consolidated Rail Corporation and identified as the CNJ Main Line and the Line Code 0201 in the records of the United States Railway Association and recorded in the Union County Clerk's Office in Book 3253, pg. 276, a portion of which property is situated between rail station 815+90 and rail station 812+40; and

Whereas, the Grantee is the owner in fee simple of a parcel of land adjoining Grantor's above described property, said parcel more particularly described in the deed between Central Jersey Industries, Inc. and the Township of Cranford attached hereto (Exhibit A); and

Whereas, there exists on Grantee's said parcel of land a concrete block building, delineated on a map, dated June 4, 1979, prepared by Sailer and Sailer, Engineers-Land Surveyors, with an address at 215 Westfield Avenue, Elizabeth, New Jersey and annexed hereto as Exhibit B; and

Whereas, the Grantee is desirous of an encroachment easement consisting of the right and privilege to use, maintain, and repair the encroaching corner of said building; and

Whereas, the Grantor has agreed, in consideration of $500.00 paid by the Grantee, to grant to the Grantee an easement for the encroaching corner of said concrete block building together with a non-exclusive right to enter onto Grantor's property for the purpose and in the manner hereinafter expressed;

NOW this Deed witnesseth that in consideration of the sum of Five Hundred Dollars ($500.00), lawful money of the United States of America, unto it well and truly paid by the Grantee at or before the sealing and delivery of this Deed, the receipt of which is hereby acknowledged, the Grantor does by these presents grant unto the Grantee, its successors and assigns a perpetual encroachment easement on Grantor's property described above in order to use, maintain, repair and remove that corner of the above-mentioned concrete building which encroaches upon Grantor's said property, subject to the reservations and covenants hereinafter set forth, together with a non-exclusive right to enter upon Grantor's property adjoining said concrete block building for the sole purpose of maintaining, repairing or removing said building and for no other purpose; said easement

and right of way being on, over and across that certain plot, piece or parcel of land situated in the Township of Cranford, County of Union, State of New Jersey and described as follows:

BEGINNING at a point in the second course of the tract conveyed by Central Jersey Industries, Inc. to the Township of Cranford and described in Exhibit A, distant therein northeasterly 212.46 feet from the beginning of second course of said tract; thence (1) along said second course north 72 degrees 24 minutes 35 seconds east 59.64 feet to the beginning of third course of said tract; thence (2) along said third course north 57 degrees 42 minutes 34 seconds east 5.77 feet; thence (3) south 10 degrees 23 minutes east 9.62 feet; thence (4) south 79 degrees 37 minutes west 64.42 feet to the point and place of BEGINNING, said description being in accordance with a survey made by Sailer & Sailer, Engineers-Land Surveyors, dated June 4, 1979 and attached hereto as Exhibit B;

Reserving to the Grantor the right to cross said ensement and right of way with additional railroad tracks and to operate, maintain and modify its railroad within the limits of the easement and right of way.

TO HAVE AND TO HOLD such encroachment easement and right of way here by granted unto Grantee, its successors and assigns as appurtenant to the said land of Grantee so long as said concrete block building shall exists, and no longer; the easement and right of way shall terminate automatically upon the removal or destruction of said building. Should said building be removed or destroyed the easement and right of way herein granted shall revert to the Grantor.

The Grantee hereby covenants with the Grantor that

a. the Grantee, its successors and assigns, shall maintain the said concrete block building in reasonably good condition and repair until removal or destroyed;

b. the Grantee, its successors and assigns, shall pay any and all taxes and assessments imposed on said building, including those imposed upon that portion of said building which encroaches upon Grantor's property;

c. the Grantee shall bear all expenses and the cost of all transfer and recording taxes, fees and charges in connection with this deed;

d. the Grantee understands that the proximity of its premises, said concrete block building, and its property to the railroad tracks on Grantor's adjoining land involves some risk, and it is therefore agreed that the Grantee, its successors or assigns, as part of the consideration for the easement granted herein, shall assume as to said building and contents and as to property of any kind located along the right of way granted herein by the Grantee, its agents, servants, employees, all risk of loss, damage or destruction arising from the exercise of the foregoing easement and right of way; and the Grantee, its successors and assigns shall defend, indemnify, protect and save harmless the State of New Jersey, the New Jersey Transit Corporation, Consolidated Rail Corporation, the New Jersey Department of Transportation, their agents, servants and employees from and against any and all loss, damages, suits, claims, demands or expense arising from the exercise of the foregoing easement and right of way, without regard to negligence on the part of any of the aforesaid parties and entities;

e. the Grantee agrees that the Grantor shall have no liability for any loss, property or personal damages, or expenses resulting to the Grantee its successors, assigns or any agents, employees, officials, sevants, invitees or licensees arising out of the

exercise of the foregoing easement and right of way;

f. the Grantee shall carry comprehensive general liability insurance for personal and property damage which shall cover all claims arising out of the possession, use and maintenance of said building including that portion of the building which encroaches upon the Grantor's property. Said insurance shall be maintained in force by the Grantee, its successors or assigns until the termination of the easement herein granted. The foregoing insurance coverage is not intended to nor does it limit the liability of the Grantee to hold the State of New Jersey and New Jersey Transit Corporation harmless;

g. the Grantee shall exercise the easements and rights granted herein so as not to interfere unreasonably with the proper and safe use, operation and enjoyment of the Grantor's property. Grantee shall, at its own cost and expense, furnish any necessary precautions so that persons, equipment and materials are kept a safe distance away from the tracks of the Grantor's railroad;

h. the Grantee shall notify Grantor of any successors to or assigns of the right and authority herein granted by the Grantor.

All of the covenants of the Grantor and the Grantee shall be deemed to be real covenants and shall run with the land as long as the above building exists.

IN WITNESS WHEREOF, the said Grantor has caused this Agreement to be duly executed this 2 day of December, 1981.

EXHIBIT A

102—DEED - BARGAIN AND SALE
CORP. TO IND. OR CORP.

This Deed,

made the 8th day of April, 19 80 .

Between

CENTRAL JERSEY INDUSTRIES, INC.

a corporation existing under and by virtue of the laws of the State of New Jersey having its principal office at Gateway 1 - Room 501 of Newark in the City of Essex and State of New Jersey herein designated as the Grantor,

And

TOWNSHIP OF CRANFORD

residing or located at 8 Springfield Avenue of Cranford in the County of in the Township of Union and State of New Jersey hereinafter designated as the Grantee,

Witnesseth, that the Grantor, for and in consideration of TWO HUNDRED SIXTY NINE THOUSAND, FIVE HUNDRED DOLLARS ($269,500)*

lawful money of the United States of America, to it in hand well and truly paid by the Grantee, at or before the sealing and delivery of these presents, the receipt whereof is hereby acknowledged, and the Grantor being therewith fully satisfied, does by these presents grant, bargain, sell and convey unto the Grantee, forever,

All that tract or parcel of land and premises, situate, lying and being in the Township of Cranford in the County of Union and State of New Jersey, more particularly described as follows:

BEGINNING at a point in the southerly line of North Avenue East at the easterly line of land now or formerly of Charles L. Bell conveyed to him by Central Railroad Company of New Jersey by Deed Book 803 Page 559, said point being 380.00 feet westerly along said line of said North Avenue East 380 feet from the westerly line of land conveyed by Central Railroad Company of New Jersey to David O. Evans by Deed Book 2220 Page 235, and from said beginning point running thence (1) along the said line of Bell South 10 degrees 08 minutes 00 seconds East 190.00 feet; thence (2) north 72 degrees 24 minutes 35 seconds East 272.00 feet; thence (3) North 57 degrees 42 minutes 34 seconds East 86.70 feet to the westerly line of land now or formerly of Elberon Development Co., Inc.; thence (4) along the same North 10 degrees 08 minutes 00 seconds West 127.0 feet to the said southerly line of North Avenue East; thence (5) along the same south 79 degrees 52 minutes 00 seconds West 350.00 feet to the point and place of BEGINNING.

The Grantor herein is the Successor in Interest to title of The Central Railroad Company of New Jersey pursuant to Order No. 965 of the Federal District Court for the District of New Jersey, said Order having been filed on September 13, 1979.

*In addition, by acceptance of this Deed, Grantee agrees to assume any liabilities for taxes, interest and penalties thereon assessed against the subject premises and to hold Grantor harmless with respect to same.

BEING known as Block 319 Lot 10 on the tax maps of the Township of Cranford, New Jersey.

Order No. 965 of the Federal District Court for the District of New Jersey was recorded in the office of the Register of Union County, New Jersey in Book 3203 at Page 636.

Together with all and singular the buildings, improvements, ways, woods, waters, watercourses, rights, liberties, privileges, hereditaments and appurtenances to the same belonging or in anywise appertaining; and the reversion and reversions, remainder and remainders, rents, issues and profits thereof, and of every part and parcel thereof; **And also** all the estate, right, title, interest, use, possession, property, claim and demand whatsoever, of the Grantor both in law and in equity, of, in and to the premises herein described, and every part and parcel thereof, with the appurtenances. **To Have and to Hold** all and singular, the premises herein described, together with the appurtenances, unto the Grantee and to Grantees' proper use and benefit forever.

In all references herein to any parties, persons, entities or corporations, the use of any particular gender or the plural or singular number is intended to include the appropriate gender or number as the text of the within instrument may require.

Wherever in this instrument any party shall be designated or referred to by name or general reference, such designation is intended to and shall have the same effect as if the words "heirs, executors, administrators, personal or legal representatives, successors and assigns" had been inserted after each and every such designation.

In Witness Whereof, *the Grantor has caused these presents to be signed and attested by its proper corporate officers and its corporate seal to be hereto affixed the day and year first above written.*

Consideration $ 500.00
Realty Transfer Fee $ Exempt
Date 12/11/81 By

*Use symbol "C" to indicate that fee is exclusively for county use.

(1) PARTY OR LEGAL REPRESENTATIVE (See Instructions #3, 4 and 5 on reverse side)

Deponent, EDWARD J. TOY (Name), being duly sworn according to law upon his/her oath deposes and says that he/she is the Attorney for the Township of Cranford, the Grantee (Name whether Grantor, Grantee, Legal Representative, Corporate Officer, Sheriff or Fee Ex. Executing Instrument, etc.)

in a deed dated December 2, 1981 transferring real property identified as Block No. a portion of 319

Lot No. 10 located at North Avenue East, Cranford, Union County, New Jersey. (Print Address - Municipality, County) and annexed hereto.

(2) CONSIDERATION (See Instruction #6)

Deponent states that, with respect to deed hereto annexed, the actual amount of money and the monetary value of any other thing of value constituting the entire compensation paid or to be paid for the transfer of title to the lands, tenements or other realty, including the remaining amount of any prior mortgage to which the transfer is subject or which is to be assumed and agreed to be paid by the grantee and any other lien or encumbrance thereon not paid, satisfied or removed in connection with the transfer of title is $500.00.

(3) FULL EXEMPTION FROM FEE Deponent claims that this deed transaction is fully exempt from the Realty Transfer Fee imposed by c.49, P.L. 1968, for the following reason(s). Explain in detail (See Instruction #7.) Mere reference to exemption symbol is not sufficient.

(b) Deed is to the Township of Cranford.

(4) PARTIAL EXEMPTION FROM FEE *NOTE: All boxes below apply to grantor(s) only. ALL BOXES IN APPROPRIATE CATEGORY MUST BE CHECKED. Failure to do so will void claim for partial exemption. (See Instruction #8)*

Deponent claims that this deed transaction is exempt from the increased portion of the Realty Transfer Fee imposed by c. 176, P.L. 1975 for the following reason(s):

a) SENIOR CITIZEN (See Instruction #9)
- ☐ Grantor(s) 62 yrs. of age or over.*
- ☐ One or two-family residential premises.
- ☐ Owned and occupied by grantor(s) at time of sale.
- ☐ No joint owners other than spouse or other qualified exempt owners.

b) BLIND (See Instruction #8)
- ☐ Grantor(s) legally blind.*
- ☐ One or two-family residential premises.
- ☐ Owned and occupied by grantor(s) at time of sale.
- ☐ No joint owners other than spouse or other qualified exempt owners.

c) DISABLED (See Instruction #8)
- ☐ Grantor(s) permanently and totally disabled.*
- ☐ One or two-family residential premises.
- ☐ Receiving disability payments.
- ☐ Owned and occupied by grantor(s) at time of sale.
- ☐ Not gainfully employed.
- ☐ No joint owners other than spouse or other qualified exempt owners.

*IN THE CASE OF HUSBAND AND WIFE, ONLY ONE GRANTOR NEED QUALIFY.

d) NEW CONSTRUCTION (See Instruction #8)
- ☐ Entirely new improvement.
- ☐ Not previously used for any purpose.
- ☐ Not previously occupied.

Deponent makes affidavit to induce the County Clerk or Register of Deeds to record the deed and accept the fee submitted herewith in accordance with the provisions of c. 49, P.L. 1968.

Subscribed and Sworn to before me

GRANT OF EASEMENT

THIS EASEMENT AGREEMENT, made this 10th day of October, 1995, between CONSOLIDATED RAIL CORPORATION, a Pennsylvania Corporation, with its principal office at Two Commerce Square, 2001 Market Street, Philadelphia, PA., 19101 ("Grantor"), and BUCKEYE PIPE LINE COMPANY, L.P., a Delaware Limited Partnership, with its principal offices at 3900 Hamilton Boulevard, Allentown, PA., 18103 ("Grantee").

WHEREAS, Grantor, or one or more of its predecessors, entered into separate license agreements, set forth in Appendix A, attached hereto and made a part hereof, with Grantee or its predecessors to permit the construction, installation, maintenance, and use of certain crossings and occupations described in said Appendix over, across, along, or under the land and tracks of Grantor at various locations in the County of Union, State of New Jersey ("Agreement" or "Agreements"); and

WHEREAS, the Agreements generally provide for annual payments; and

WHEREAS, the parties hereto desire to replace the Agreements with one permanent and irrevocable easement document and to establish the terms and conditions under which this Grant of Easement may be extended to cover the installation of new or additional facilities upon the property of Grantor by Grantee;

NOW, THEREFORE, Grantor, for and in consideration of Thirty One Thousand Eight Hundred Sixty Five and 05/100 Dollars ($31,865.05), the receipt of which is hereby acknowledged, and in further consideration of Grantee keeping and performing the covenants and conditions hereinafter stated on the part of Grantee to be kept and performed, does hereby grant unto Grantee, to the extent the title of Grantor so permits, an easement in its property for the purposes stated in the second paragraph on this page, namely, the right to maintain, repair, renew, replace, use and remove the facilities, which easement shall encumber only the physical space and dimensions actually required for the current physical facilities now existing pursuant to the Agreements. Such facilities in their present form or as modified pursuant to any provision of this Easement Agreement, together with any appurtenances thereto are hereinafter referred to singularly as the "FACILITY" and collectively as the "FACILITIES".

TOGETHER WITH the right of ingress and egress to and over said property, and any adjoining land of Grantor, insofar as necessary for the construction, maintenance, repair, alteration, renewal, use and removal of the FACILITIES, which activities shall be conditioned on proper notification to Chief Engineer Construction of Grantor or his designee, hereinafter referred to as "Chief Engineer."

1.1 The location and construction plans referred to in the Agreements shall continue to apply to the FACILITIES, and no change shall be made therein, including (but not limited to)

Prepared by _____ of Consolidated Rail Corporation, Philadelphia, PA

changes in location, nature, size, number, or use of any FACILITY without the prior written consent of the Chief Engineer, which consent shall not be unreasonably withheld.

1.2 The work of construction, maintenance, repair, alteration, modification, renewal, relocation, replacement, and removal of the FACILITIES (all hereinafter referred to as "Work") shall be done by, and at the sole cost and expense of, Grantee in a manner satisfactory to, and approved by, the Chief Engineer, which approval shall not be unreasonably withheld, and shall not interfere with the proper and safe use and operation of the property or operations of Grantor; provided, however, that if any governmental entity having jurisdiction over the FACILITIES has determined or prescribed the manner and means of accomplishing the Work, or any portion thereof, then such requirements shall prevail, to the extent they are more restrictive than Grantor's, and Grantee agrees to comply therewith at all times at its sole cost and expense. The foregoing is not intended to modify or limit the provisions of Section 5, hereof.

1.3 Grantee, at its sole cost and expense, when performing any work in connection with the FACILITIES, shall furnish watchmen to keep persons, equipment and materials a safe distance from the tracks and operations of Grantor.

1.4 In addition to, but not in limitation of, any of the foregoing provisions, if at any time Grantor should deem flagmen or inspectors necessary to protect its operations, property, employees, patrons, or licensees during the course of the Work, Grantor shall have the right to provide and deploy such flagmen or inspectors, and Grantee agrees to bear the full cost (as specified in Section 7 of this Easement Agreement), risk and expense thereof and to promptly reimburse Grantor therefore upon demand. The furnishing or failure to furnish flagmen or inspectors by Grantor shall not release Grantee from any liabilities assumed by Grantee hereunder.

2. It is understood and agreed by the parties hereto, that from time to time hereafter the terms and conditions of this Easement Agreement may be extended to cover the installation and operation thereafter of additional facilities to be installed along, upon, over, under and across the property of Grantor, by Grantee, or if Grantee desires subject to the provisions of Section 1.1, or is required as herein provided, to revise, replace, remove, add to, or engage in new construction, expansion, or changes in the existing FACILITIES (including without limitation any changes in the nature of the product carried by, through, in, or upon the FACILITIES), it shall submit detailed plans, in accordance with current issues of Grantor's specification numbers CE-4 and/or CE-8 and if no longer produced by Grantor, then pursuant to such specifications as may be in effect, and obtain the approval of the Chief Engineer before any Work is commenced, which approval shall not be unreasonably withheld, the terms and conditions of this Easement Agreement shall apply thereto; and Grantor, (i) reserves the right to assess additional charges which Grantee agrees to pay, except Grantee may change the nature of the hydrocarbon, hydrocarbon derivatives or chemical or fuel-related products carried by, through, in, or upon the existing transverse crossing FACILITIES at no additional consideration, except Grantor's standard preparation fee as specified in Grantor's CE-3 Rental Schedule and if it is no longer produced by Grantor, then pursuant to such schedule as may be in effect, and (ii) if applicable, Grantor will provide Grantee with two (2) copies of an "Addendum to Grant of Easement" similar to Appendix "B" attached hereto and made a part hereof. Grantor and Grantee by mutual agreement may change the form of said Addendum as situations warrant.

3.1 Grantee shall be responsible, on its own initiative, for maintaining, repairing and renewing the FACILITIES and in addition, shall, upon notice from Grantor, promptly make such repairs and renewals thereto as may be required by Grantor. In the event of an emergency, Grantee shall take immediate steps to perform any necessary repairs, in which case, Grantee shall provide notification to Grantor of all work performed promptly after its completion, and in the event Grantee fails to immediately take steps to perform the necessary emergency repairs, Grantor shall have the right, but not the obligation, to perform or have such repairs performed at the sole cost and expense of Grantee. It is not the intent of either party hereto to circumvent (and both parties shall seek not to circumvent) the terms of any labor contract between the parties hereto and their respective labor organizations or unions.

3.2 "Emergency", as used herein, shall mean a condition causing an actual interruption to, or interference with, (i) the operation of Grantor's rail transportation business, or (ii) the operation of Grantee's FACILITIES for their intended purposes; also, any condition that (iii) caused or is causing any of loss or injury to any property of Grantor or Grantee and their employees or of any other individual or entity, or (iv) if not immediately corrected, could imminently cause such interruption, interference, loss or injury.

4.1 Grantor shall have the right to inspect the FACILITIES at any time, and to approve the materials used in the Work.

4.2 The right of inspection of the FACILITIES by Grantor shall extend for an appropriate distance on each side of the property of Grantor, inasmuch as the method of performing the Work or the material used therein with respect to the portion of the FACILITIES adjoining the property of Grantor may have a significant impact upon the strength and stability of the portion of the FACILITIES over, under, upon, or in the property of the Grantor.

5. Grantee shall comply with all statutes, rules, regulations, orders, directives, ordinances and similar promulgations of law applicable to the FACILITIES, and shall assume all cost, expense and responsibility in connection therewith, without any liability therefor on the part of the Grantor. Grantee shall indemnify, defend (at Grantor's option) and hold Grantor harmless from and against all costs, fines, penalties and expenses arising from the failure of Grantee to so comply.

6.1 Grantee understands that the railroad operations at or near the FACILITIES involve risk, and Grantee, as part of the consideration for this Grant, and with full knowledge and appreciation of such risk, hereby releases and waives any right to ask for or demand damages of any type, including direct or consequential damages, for or on account of any loss or injury to any property of Grantee and its employees, including property in the care, custody and control of Grantee, and to the FACILITIES and contents thereof that are over, under, upon, or in the property of Grantor, including loss of, or interference with, service or use thereof, except when proved by Grantee to be due directly to the sole negligence of Grantor.

6.2 Grantee shall indemnify, save harmless and defend (at Grantor's option) Grantor from and against all cost and expense arising from, or in connection with, any and all losses, damages, detriments, suits, claims, demands, costs and charges which Grantor may directly or

indirectly suffer, sustain, or be subjected to by reason of the construction, placement, attachment, presence, use, maintenance, repair, alteration, renewal, relocation, replacement, or removal of the FACILITIES, in, on, about, under, over, or from the property of Grantor, whether such loss and damage be suffered or sustained by Grantor or by its patrons, or licensees, or other persons or entities, including Grantee, its patrons and licensees and whether attributable to the act, omission or neglect of Grantor or any other person or entity, except when proved by Grantee to be due directly to the sole negligence of Grantor.

6.3 Notwithstanding anything contained in Section 6.2, and irrespective of any negligence of Grantor, Grantee assumes sole responsibility for, shall indemnify, save harmless, and defend (at Grantor's option) Grantor from and against all claims, actions, or legal proceedings arising, in whole or in part, from (i) the failure of Grantee to comply with any obligations imposed on it by this Easement Agreement, or (ii) any claims, actions, or legal proceedings under the Federal Employer's Liability Act ("FELA") and any amendments to FELA now or hereafter in effect, alleging or claiming, in legal effect, that Grantor in respect to that portion of its land which lies under or near the FACILITIES, failed to correct or guard against an unsafe condition or failed to furnish a safe place to work. Failure by Grantor to make verbal or written complaints to Grantee with respect to: unsafe working conditions, or Grantee's failure to carry out its obligations under this Easement Agreement; or knowledge on the part of Grantor of such unsafe working conditions, or Grantee's failure to carry out its obligations under this Easement Agreement, shall not be deemed to constitute acquiescence therein or waiver of by Grantor or actionable negligence on the part of Grantor.

6.4 If a claim or action is made or brought against either party and for which the other party may be responsible hereunder in whole or in part, such other party shall be notified and permitted to participate in the handling or defense of such matter.

7. Except as provided in Section 9.1 and 9.2 of this Easement Agreement, all cost and expense in connection with or resulting from the Work (as hereinabove defined) shall be borne by Grantee. In the event of Work being performed or material furnished by Grantor under the stipulated right to perform such Work under any section hereof, Grantee agrees to pay to Grantor (a) the actual cost of material plus the current applicable overhead percentages for storage, handling, transportation, purchasing and other related material management expenses, and (b) the actual cost of labor plus the current applicable overhead percentages as developed and published by the Accounting Department of Grantor for fringe benefits, payroll taxes, administration, supervision, use of tools, machinery and other equipment, supplies, employer's liability insurance, public liability insurance, and other insurance, taxes and all other indirect expenses, including but not limited to, automobile mileage charges then in effect as published by the United States Government. It is understood that such material and labor overhead charges shall be applied at the rates which are effective at the time of the performance of any such work by employees of Grantor. Grantee agrees to pay such bills within thirty (30) days of the presentation thereof by Grantor.

8. In the event Grantee elects to discontinue use of any of the FACILITIES, ("Abandoned Facilities"). Grantee shall, in a manner satisfactory to Grantor, (i) remove the Abandoned Facilities from Grantor's property or abandon them in place, with the approval of the

Chief Engineer, (ii) restore the property, and (iii) deliver to Grantor a release of this Easement Agreement with respect to the Abandoned Facilities in recordable form. If Grantee fails or refuses to remove the Abandoned Facilities within one hundred eighty (180) days after requested to do so by Grantor, Grantor shall (a) have the right, but not the obligation, to remove the Abandoned Facilities at the sole cost and expense of Grantee, and (b) not be liable to Grantee for such removal.

9.1 Grantee shall, at its sole cost and expense (except as otherwise specified below) and commencing within thirty (30) days following receipt of notice from Grantor, take such action as Grantor may specify to strengthen, support, relocate, or otherwise protect or modify any of the FACILITIES and thereafter promptly complete such work. Such requested action shall hereinafter be referred to as a "Modification". If necessary, Grantor shall provide so much of its adjoining land to Grantee as may be available for such Modification without additional compensation from Grantee. The obligation of Grantee to pay for such Modification shall be conditioned upon such Modification being necessary to permit and accommodate changes of grade or alignment and improvement in or additions to the operating facilities of Grantor for the conduct of its railroad business. If such Modification is being required of Grantor by a governmental entity, irrespective of whether such necessity or requirement is temporary or permanent, such Modification shall be done at no expense to Grantor. All Work in connection with any Modification shall comply with and be subject to the terms and conditions of this Easement Agreement.

9.2 With respect to requested Modification(s) for the cost and expense of which Grantee is responsible, Grantor agrees that Grantee shall be given an opportunity to seek and propose alternative courses of action, that, subject to Grantor's approval, would eliminate the necessity of relocating FACILITIES of Grantee. Such alternatives include, but are not limited to the acquisition of additional land at Grantee's sole cost and expense, which could accommodate the relocation or improvement of Grantor's railroad operating facilities for the cost of which Grantee would be fully responsible.

10.1 In the event the FACILITIES consist of electrical power or communication wires and appurtenances, Grantee shall promptly, upon verification that their FACILITIES are causing inductive interference, remedy such inductive interference growing out of, or resulting from the presence, condition or use of, the FACILITIES; and if Grantee fails to do so immediately, then Grantor may do so, and Grantee agrees to pay to Grantor on demand the full cost and expense thereof.

10.2 In the event the FACILITIES consist of an underground occupation, Grantee shall be responsible for any settlement caused to the land, tracks, facilities, and appurtenances of Grantor arising or resulting during the twelve month period subsequent to the completion of all Work. Grantee agrees, in addition to its covenants set forth in Section 6.2 hereof, to pay to Grantor on demand the full cost and expense of correcting such settlement.

11. As further consideration for this Easement Agreement, Grantee shall indemnify, Grantor for, and defend (at Grantor's option) and hold Grantor harmless from and against any liens, assessments, taxes, or charges of any kind made against Grantor or any of its property by

reason of the presence, construction, maintenance, or use of any of the FACILITIES, and Grantee shall pay Grantor, promptly upon bills rendered therefor, the full amount of any such liens, assessments, taxes, or charges rendered against Grantor or any of its property, including penalties, interest, late fees, and the costs to remove or bond any lien, assessment, tax, or charge from official records.

12. The rights herein granted to Grantee are subject to the right of Grantor to make use of its property, or any part thereof and facilities for rail transportation and related purposes and for all other purposes unimpaired by Grantee's FACILITIES and Work associated therewith. Grantor reserves the right to use such property, or any part thereof, for rail transportation and related purposes and for all other purposes which are not inconsistent, and which do not interfere, with, or impair, the rights granted by this Easement Agreement.

13.1 If the Grantee's right to exercise the rights herein granted shall be challenged through legal process by any third party on the grounds that the Grantor did not have sufficient interest to grant such rights, the Grantor consents and agrees, insofar as it may lawfully do so, to the acquisition by the Grantee of the disputed rights by (or in lieu of) the power of eminent domain, but in the event of the exercise of such power by Grantee, such rights shall be subject to and exercised in accordance with the terms and provisions of this Easement Agreement.

13.2 In the event Grantee is unable to acquire such rights by (or in lieu of) eminent domain, as a result of a successful legal challenge, then Grantor shall refund to Grantee, and Grantee hereby agrees to accept, as liquidated damages, that portion of the consideration paid under this Easement Agreement by Grantee that is allocable by proration to the portion or portions of land under this Grant which Grantee is unable to acquire. Grantee hereby irrevocably waives any and all rights it may have to claim any other damages it may suffer by reason of a third party's challenge as set forth in Section 13.1 hereof.

14. The words "Grantor", "Grantee", "party" and "parties" used herein shall include the subsidiaries, affiliates, directors, officers, agents and employees of Grantor and Grantee.

15. The terms and conditions of this Easement Agreement shall inure to the benefit of and be binding upon the parties hereto and their respective successors and assigns.

16. Grantee shall not commence any Work unless and until the mechanics of construction and all matters related thereto shall have received the approval of the Chief Engineer, which approval shall not be unreasonably withheld.

17. Grantee hereby agrees to pay all costs and fees in conjunction with the filing or recording of this instrument in or with any public place or with any public agency or subdivision and shall provide Grantor a copy of the recorded Easement Agreement.

18. The failure or delay on the part of either party to enforce or exercise at any time any of the provisions, rights or remedies in this Easement Agreement shall in no way be construed to be waiver thereof, nor in any way to affect the validity of this Easement Agreement or any part hereof, or the right of the party to thereafter enforce each and every such provision, right or

remedy. No waiver of any breach or violation of this Easement Agreement shall be held to be a waiver of any other subsequent breach or violation.

19. Every notice, approval, consent, demand or other communication required or permitted under this Easement Agreement shall be deemed sufficiently given by one party when received by the other party after being sent postage prepaid by overnight courier or United States certified or registered mail, addressed as follows:

To Grantor:

Consolidated Rail Corporation
Two Commerce Square
2001 Market Street
P. O. Box 41411 - 11C
Philadelphia, PA 19101-1411
Attention: Chief Engineer Construction

To Grantee:

Buckeye Pipe Line Company
P. O. Box 368
Emmaus, PA 18049-0368
Attention: Manager, ROW & Permits

20. This Easement Agreement shall be construed, governed and enforced in accordance with the laws of the State of New Jersey

21. Any and all obligations, liabilities or covenants which arose, may have arisen or were incurred by either party prior to the execution of this Easement Agreement shall survive to the same extent as if they arose under this Easement Agreement.

IN WITNESS WHEREOF, the parties hereto, intending to be legally bound, have caused this Grant to be fully executed the day and year first above written.

SECURITY INTEREST AGREEMENT

This Security Interest Agreement (hereinafter "Agreement"), made on December 12, 2001, is between New Jersey Transit Corporation acting for itself and through its subsidiary New Jersey Transit Rail Operations, Inc. (hereinafter collectively "NJ Transit"), a public instrumentality of the State of New Jersey, with principal offices at One Penn Plaza East, Newark, New Jersey, and the National Railroad Passenger Corporation (hereinafter "Amtrak"), a corporation organized under the Rail Passenger Service Act and the laws of the District of Columbia, with principal offices at Union Station, Washington, DC, hereby referred to collectively as the "Parties."

WHEREAS, Amtrak is the owner of the Northeast Corridor which includes rail property and railroad infrastructure in the States of Pennsylvania, New Jersey and New York, including points between Trenton, New Jersey and Pennsylvania Station, New York City and continuing through to Sunnyside Yard in Queens, New York City; and

WHEREAS, Amtrak is the operator of intercity passenger rail service on the Northeast Corridor pursuant to applicable federal law; and

WHEREAS, Amtrak maintains railroad infrastructure on the Northeast Corridor to enable train equipment and service to operate on the Northeast Corridor; and

WHEREAS, NJ Transit, pursuant to the New Jersey Public Transportation Act of 1979, as amended, and other applicable State and Federal law is authorized to operate commuter rail passenger service carrying passengers in New Jersey and between points in New Jersey and points in other states; and

WHEREAS, the Parties cooperatively provide passenger rail service in the State of New Jersey to and from New York City, New York; and

WHEREAS, the Parties have executed effective December 12, 2001 an Amendatory Agreement to the Parties' "Northeast Corridor Joint Benefit Capital Program Agreement Between New Jersey Transit Corporation and the National Railroad Passenger Corporation" this agreement hereinafter referred to as the "JBA"; and

WHEREAS, pursuant to the Parties' agreement in the JBA, over the period from October 1, 2001 through September 30, 2006, both Amtrak and NJ Transit will jointly contribute on a 50-50 basis a total of three hundred fifty million dollars ($350,000,000) for capital improvement projects to the Northeast Corridor; and

WHEREAS, the capital improvements to the Northeast Corridor that are funded by the Parties under the JBA will be owned by Amtrak and be subject to this Security Interest Agreement; and

MB9788-0951

WHEREAS, in return for its financial investment under the JBA, NJ Transit shall receive under this Agreement the rights to the beneficial use of the JBA capital assets and improvements during a twenty-five year period in which such assets are in use; and

WHEREAS, NJ Transit desires to obtain a security interest in those Northeast Corridor assets that are purchased or improved with NJ Transit funds under the JBA, and Amtrak is willing to grant and convey such a security interest; and

WHEREAS, the Parties hereby desire to consummate and fulfill their respective obligations to enter into a security interest agreement as per the Parties' understanding and intentions in the JBA;

NOW THEREFORE, in consideration of the mutual covenants and conditions herein stated below and in consideration of the mutual covenants and conditions stated in the JBA which is hereby incorporated by reference, and intending to be legally bound thereby, the Parties hereby enter into this Agreement as per the following terms and conditions:

1. Definitions:

(A) **Controlling Event:** The term "Controlling Event" shall mean the dissolution of Amtrak pursuant to Federal law or pursuant to bankruptcy law or the reorganization of Amtrak and where as a result of such dissolution or reorganization, Amtrak, directly or indirectly, no longer owns or no longer controls or operates, the NEC and the JBA Capital Assets, as defined in this Agreement. However, in the event of such a dissolution or reorganization of Amtrak, if a successor entity to Amtrak is legally bound by the terms of this Agreement and the JBA, the dissolution or reorganization of Amtrak shall not be considered a "Controlling Event".

(B) **JBA Capital Assets:** The term "JBA Capital Assets" shall mean the collateral of this Agreement. The "JBA Capital Assets" shall be in the value and amount of $175,000,000 or up to $175,000,000 if NJ Transit's investment under the JBA is in an amount less than $175,000,000. These JBA Capital Assets shall mean any and all NEC property, in the form of personal property, fixtures and/or real property, which is purchased, acquired, created and/or improved with the funds provided by NJ Transit under the JBA subsequent to September 30, 2001 for capital projects as set forth under the JBA. Such "JBA Capital Assets" shall be for various railroad properties or systems and may include such NEC items as machinery, computers, electronic equipment, railroad tracks and ties, railroad equipment, bridges, tunnels, railroad signaling equipment, railroad power equipment, catenary, catenary related equipment, railroad safety equipment, railroad repair equipment, stations, station improvements, structures, fixtures, facilities and any other type of personal or real property necessary for the operation of railroad service on the NEC. The "JBA Capital Assets" are intended by the Parties to improve and enhance the value and operational efficiency of the NEC so that such improvements inure to the benefit of the Parties' railroad operations.

(C) **NEC:** For purposes of this Agreement, the term "NEC" shall mean the Northeast Corridor railroad property owned, operated and maintained by Amtrak commencing at Trenton, New Jersey (including Morris interlocking) and extending through to New York City's

HB9788-1952

Pennsylvania Station and through the East River Tunnels to, and including, Sunnyside Yard in Queens, New York City.

(D) **Security Interest:** The term "Security Interest" shall mean that interest granted by Amtrak to NJ Transit so that NJ Transit shall have all of the rights of a secured party under the Uniform Commercial Code and applicable law. The "Security Interest" shall be subject to and subordinate to the interests of the Federal Government, if any, and of any pre-existing interests of third parties, if any.

2. **Grant of Security Interest by Amtrak to NJ Transit:**

(A) In consideration of the actual payments made by NJ Transit under the JBA for the JBA Capital Assets during the term of the JBA from September 30, 2001 through September 30, 2006, Amtrak hereby grants and conveys to NJ Transit a Security Interest in the JBA Capital Assets. The Parties agree, on an annual basis throughout the term of the JBA, to identify in writing those specific JBA Capital Assets to which the Security Interest will attach as actual Capital Program expenditures against program line items identified on Exhibit 2 of the JBA.

(B) The granted and conveyed Security Interest shall exist, extend and will be valid for a period of twenty-five years from the date each JBA Capital Asset described in Exhibit 2 of the JBA, is placed in service.

(C) For the duration of NJ Transit's Security Interest, Amtrak hereby agrees and covenants that it will not, without the written consent of NJ Transit, sell, assign or otherwise transfer the JBA Capital Assets unless such transfer is for the purpose of satisfying a pre-existing interest, if any, or unless Amtrak obtains a replacement item whose value is equal or greater than that of the JBA Capital Assets item which is transferred.

(D) Upon the occurrence of the Controlling Event, NJ Transit, subject to the pre-existing interests of the Federal Government, if any, or subject to the pre-existing interests of third parties, if any, shall have the right to sell assume or otherwise dispose of that portion of the JBA Capital Assets equal to the value of the, JBA Capital Assets, less depreciation which shall be calculated on a straight-line basis over the twenty-five period of the assets as specified in this Security Interest. In lieu of such sale or disposal, Amtrak (or its successor entity) may, at its option, compensate NJ Transit in an amount equal to the depreciated value of the JBA Capital Assets. Unless and until the occurrence of the Controlling Event, Amtrak shall be entitled to all of the benefits and rights pertaining to the JBA Capital Assets.

3. **Grant by Amtrak to NJ Transit of Beneficial Right to Use the JBA Capital Assets**

(A) In consideration of the payments made by NJ Transit under the JBA for the JBA Capital Assets, Amtrak hereby grants and conveys to NJ Transit the right to enjoy and benefit from the use of the JBA Capital Assets during the twenty-five year life of the JBA Capital Assets, subject to the terms and conditions of the Northeast Corridor Service Agreement between the Parties.

MB9788-0953

4. Amtrak Covenants and Declarations

(A) Amtrak states and declares that this Security Interest Agreement is a valid, legally binding and enforceable agreement of Amtrak.

(B) Amtrak states and declares that this Agreement has been duly authorized by all necessary corporate action on the part of Amtrak and that the execution, delivery and performance of this Agreement will not violate any provision of Amtrak's governing instruments, charter or by laws. Amtrak further states and declares that this Agreement will not violate any provision of the Mortgage dated December 9, 1976 between Amtrak and the United States of America.

5. NJ Transit Covenants and Declarations

(A) NJ Transit states and declares that this Agreement is a valid, legally binding and enforceable agreement of NJ Transit.

(B) NJ Transit states and declares that this Agreement has been duly authorized by all necessary agency action on the part of NJ Transit and that the execution, acceptance and performance of this Agreement will not violate any provision of NJ Transit's governing instruments, governing laws, by laws.

(C) NJ Transit shall not unreasonably oppose any effort by Amtrak to obtain financing secured in whole or in part with any JBA Capital Assets provided that such action will not diminish the value of the Security Interest.

6. Release of Grant of Security Interest

(A) At such time as each JBA Capital Asset item reaches the end of the twenty-five year periods each such item shall be released from this Agreement by NJ Transit. This Agreement shall terminate when all JBA Capital Assets have reached the end of the twenty-five year periods.

7. Successors and Assigns; Recordation

(A) This Agreement and the rights and obligations conferred and imposed hereunder shall be binding on and inure to the benefits of the successors, assigns and transferees of the Parties.

(B) The Parties to this Agreement hereby agree that this Agreement may be recorded by NJ Transit as NJ Transit may deem necessary in the appropriate land records offices in the appropriate offices in Washington, D.C., the States of Pennsylvania, New Jersey and New York. Amtrak shall provide all reasonable assistance to NJ Transit to ensure that this Agreement is accepted for recordation. Costs of recordation shall be borne by NJ Transit.

MB9788-0954

8. **Severability of Provisions**

(A) If any provision of this Agreement or the application of any such provision to any person or circumstance shall be held invalid or unenforceable, the remainder hereof, and the application of such provision to any person or circumstance other than those to which it is held invalid or unenforceable, shall not be invalidated or affected thereby.

9. **Notices**

All notices and other communications hereunder must be in writing. Any notice, request, demand, claim or other communication hereunder shall be deemed duly given it is sent by registered or certified mail, return receipt requested, postage prepaid, and addressed to the intended recipient as set forth below and the United States Postal Service confirms delivery thereof.

EASEMENT AGREEMENT

This **EASEMENT AGREEMENT** ("Agreement"), is made this 6 day of ~~July~~ August, 2018, by and between **NATIONAL RAILROAD PASSENGER CORPORATION**, a corporation organized under 49 U.S.C. §24101 *et seq.* and the laws of the District of Columbia, having its headquarters at 60 Massachusetts Avenue, N.E., Washington, D.C. 20002, ("**Amtrak**" or "**Grantor**") and **NEW JERSEY TRANSIT CORPORATION**, an instrumentality of the State of New Jersey, with an address at One Penn Plaza E, Newark, NJ 07105 ("**Grantee**" or "**NJ TRANSIT**"). Amtrak and Grantee are each referred to individually as a "Party" and collectively as the "Parties."

WITNESSETH:

WHEREAS, Amtrak, a corporation organized under the Rail Passenger Service Act and the laws of the District of Columbia, owns the Northeast Corridor ("NEC") rail line from Washington DC to New York City, NY; and

WHEREAS, NJ TRANSIT is an instrumentality of the State of New Jersey and is authorized to operate rail passenger service in New Jersey and between points in New Jersey and points in other states pursuant to the New Jersey Public Transportation Act of 1979, as amended; and

WHEREAS, NJ TRANSIT operates commuter trains over portions of the NEC; and

WHEREAS, NJ TRANSIT and Amtrak entered into the NEC Services Agreement originally dated May 1, 1985, which has been extended and modified several times to its current term, effective October 1, 2015, which describe the terms and conditions for the provision of and compensation for NJ TRANSIT's operations on the NEC; and

WHEREAS, pursuant to the 900 Day Option Settlement Agreement between the Parties dated December 13, 1982, and by deeds of conveyance dated July 1, 1982 ("900 Day Settlement"), NJ TRANSIT acquired and Amtrak reserved certain NEC facilities and property interests on the NEC; and

DB6280 0976

WHEREAS, in the 900 Day Option Settlement, Amtrak reserved certain railroad property along M.P. 14.5 in the City of Elizabeth, County of Union, State of New Jersey ("Amtrak Property"); and

WHEREAS, in the 900 Day Option Settlement, NJ TRANSIT acquired Parcels 2A, 2B, 2C1, 2D1, 2E1 and 2F1, known as the Elizabeth Station ("NJ TRANSIT Property"); and

WHEREAS, in the 900 Day Option Settlement, NJ TRANSIT also acquired perpetual easements in real property for rail purposes in Parcels E2C2, E2D2, E2E2, E2F2 and E2G, which include the platforms along Elizabeth Station ("Grantee's Easement Property"); and

WHEREAS, on or about 1987, NJ TRANSIT constructed high level platforms, walkways, elevators and stairways on portions of Grantor's property adjacent to Grantee's Easement Property, known as parcels E2H and E2I ("Grantor Property"); and

WHEREAS, Grantee has operated commuter rail service and maintained railroad structures on the NJ TRANSIT Property, Grantee's Easement Property, as well as the structures on Grantor Property; and

WHEREAS, the Parties wish to memorialize the legal relationship of the existing improvements on Grantor Property; and

WHEREAS, Grantee is building a new station building, elevators and stairs in the NJ TRANSIT Property, as well as rehabilitating the existing platforms and stairs on Grantor Property and building additional high level platforms and two ramps on Grantor Property; and

WHEREAS, the Parties executed a Project Initiation Form #184 agreement dated October 10, 2013 ("PI 184") authorizing Amtrak services for the preliminary design of Grantee Improvements, as further defined therein; and

WHEREAS, PI 184 was amended on or about October 24, 2016; and

WHEREAS, the Parties executed Project Initiation Form #184A dated January 19, 2018 ("PI 184A") approving Amtrak services for final design and construction of the Grantee Improvements; and

WHEREAS, Grantee has also requested Amtrak to grant Grantee a perpetual easement over Grantor Property, as more fully described in Exhibits A-1 and A-2, for the limited use purposes as set forth in Section 1 of this Agreement; and

WHEREAS, Amtrak is willing to grant the easement to Grantee pursuant to the terms and conditions of this Agreement; and

NOW THEREFORE, in consideration of the mutual covenants of the Parties hereto and

for other good and valuable consideration, the receipt and sufficiency of which is hereby acknowledged, the Parties agree as follows:

1. GRANT OF EASEMENT; USE

1.1. Grant. Subject to the terms and conditions of this Agreement, Amtrak, insofar as it has the power, title and authority so to do, hereby grants to Grantee an exclusive (except as set forth herein), perpetual easement, solely for the uses and purposes set forth below (the "Easement"), on the area (located on the Grantor Property) designated as the "Easement Area" as described on Exhibit A-1 (and depicted on Exhibit A-2), consisting of approximately 0.383 acres +/- for the north side platform and 0.497 acres +/- for the south side platform, for a total easement area of approximately 0.88 acres +/- all as more fully set forth in Exhibits A-1 and A-2 (collectively, the " Easement Area").

Notwithstanding anything else set forth herein, the Parties hereby acknowledge that during the course of the negotiations of this Agreement the definitions of Grantor Property and Easement Area were modified such that they each now describe the same real property. In order to expedite the execution of this Agreement, the Parties agreed that rather than redrafting the entire agreement, the Parties would acknowledge the negotiated change in this subsection.

1.2 Acceptance. Grantee has inspected and accepts the Easement Area in its present condition, AS IS, WHERE IS. To the best of Grantee's knowledge and belief, no statements, guarantees, representations or warranties, either express or implied, with regard to condition, fitness for use, zoning, or as to any matter or thing affecting or related to the Easement Area have been made by Grantor that are not specifically expressed herein, and Grantee is not relying on any statements, guarantees, representations or warranties, either express or implied, not specifically set forth herein. Grantee hereby waives, releases and discharges any claim Grantee may have against Amtrak with respect to the condition of the Easement Area, any defect therein, either patent or latent, the ability or inability to use the Easement Area as contemplated by this Agreement, or any other state of facts which exists with respect to the Easement Area.

1.3 Use. Subject to the terms and conditions of this Agreement, the Easement Area may be used by Grantee in perpetuity for passenger rail purposes, including but not limited to, all right, title and interest that the Grantor may have in and to the following improvements: the platforms, lighting facilities, signs and appurtenances constructed thereon.

2. AMTRAK'S FACILITIES

2.1 Reservation. Amtrak hereby reserves and retains unto itself and its successors and assigns forever the right to install, construct, use, operate, repair, inspect, maintain, renew, reconstruct or relocate any existing or future real or personal property located within, on, below or

above the Easement Area, including but not limited to fixtures; railroad tracks; supports; piers; footings; columns, appliances; equipment; utilities; pipe; conduit or tunnel; and any electric, communication, data, fiber optic or signal transmission lines; together with poles and guys therefor; any water, gas, steam, sanitary sewer, storm sewer or other utility system or lines(any and all of which shall be referred to individually as a "Fixture" and collectively as "Fixtures") as may now exist or may hereafter be placed upon, under or over the Easement Area by Amtrak or its designees. The Easement Area and the Easement are subject and subordinate to any and all such rights and uses, together with the right of Amtrak to enter in, on, above or under the Easement Area for access to permit the exercise of the foregoing rights. Grantee's rights hereunder also are subject to the reservations, requirements and restrictions set forth in Exhibit C of this Agreement. Notwithstanding such reservation, no new Fixtures (other than comparable replacements of existing Fixtures) will be installed that would negatively impact Grantee's operations within the Easement Area. NJ TRANSIT will receive all revenues from advertising located on platforms and ancillary structures attached thereto (such as stairwells and elevators) on the Easement Area. All other advertising operations and revenue is reserved to the Grantor.

2.2 Relocation or Removal of Fixtures. The Parties will coordinate the relocation of existing utilities in the Easement Area as requested by NJ TRANSIT. If Grantee requests the relocation or removal of any Fixture, Amtrak may approve or deny such request in its sole discretion including any conditions if Amtrak elects approval.

2.3 Subordination. The Easement and Easement Area are and shall be subject and subordinate to all existing and future agreements (to which Amtrak is a party) for on-ground, above-ground and below ground telecommunication, fiber optic, pipe and wire, on, under or over the Easement Area, whether such agreements are recorded or not, and Amtrak shall have a permanent right for access to, and installation, operation, use, maintenance, repair, renewal, relocation, inspection, removal and replacement of such commercial fixtures and any technological evolution of such commercial fixtures and the right to retain all consideration therefrom. Notwithstanding the foregoing, any new agreements may not unreasonably interfere with Grantee's operations on the Easement Area.

2.4 Amtrak's Operations. Amtrak reserves and shall retain the right for itself and, its employees, agents, servants, contractors, invitees, licensees, and assigns at all times to park, store and move engines, rolling stock and other equipment on adjacent Amtrak railroad right-of-way, together with the right to maintain the adjacent Amtrak right-of-way as now constructed, or as may be hereafter constructed, with the further right at all times to enter upon the Easement Area for the purpose of operating, maintaining, constructing, installing, repairing, replacing, relocating, removing and renewing the adjacent Amtrak railroad right-of-way or any of Amtrak's improvements thereon.

2.5 Grantee's Operations. Amtrak will exercise its rights and reservations under this Agreement so as not to unreasonably interfere with Grantee's operations on the Easement Area.

3. EASEMENT FEE; COSTS AND EXPENSES

3.1 Easement Fee. Upon execution of this Agreement by Grantee, Grantee shall pay Amtrak Four Hundred Seventy Nine Thousand ($479,000.00) Dollars as fair market value as established by an appraisal as provided by NJ TRANSIT (the "Easement Fee"). The Easement Fee shall be deemed earned in full when paid and shall not be refundable for any reason.

3.2 Costs. In addition to the Easement Fee, Grantee shall pay promptly when due all costs, fees, interest, charges, expenses, reimbursements, and obligations of every kind and nature whatsoever relating to this Agreement and the Easement.

3.3 Recordation Taxes and Fees. Grantee shall be responsible for all transfer and recordation tax, recording fees, and any and all other costs and expenses associated with the granting or recordation of this Agreement.

3.4 Real Estate and Use Taxes. Grantee shall pay any tax or assessment (or any payments imposed in lieu thereof) levied, assessed, or imposed upon Amtrak, the Amtrak Property, the Easement Area, or the Grantee Improvements (as such term is defined in Article 5 of this Agreement) based on or arising out of the ownership, value, use, occupation or operation of the Easement Area or the Grantee Improvements. Amtrak is exempt from state and local taxes pursuant to 49 U.S.C. §24301(l). The obligation to make any payments pursuant to this Article will survive the termination of this Agreement.

4. GRANTEE'S EASEMENT AREA MAINTENANCE AND OBLIGATIONS

4.1 No Interference with Amtrak. Grantee shall use the Easement Area in a careful, safe and orderly manner so as not to interfere in any way with the maintenance or operation of the business of Amtrak or of its licensees or with any Fixtures used in the business of Amtrak or of its licensees. Except in emergency circumstances, when no advance notice is necessary, Amtrak shall provide NJ TRANSIT with thirty days' advance notice of any work performed by Amtrak or its licensees on the Easement Area or that may impact Grantee's operations in the Easement Area.

4.2 Permits and Licenses. Grantee, at its sole cost and expense, shall obtain all applicable permits and licenses for its use of the Easement Area.

4.3 Maintenance and Repair. Grantee, at Grantee's sole cost and expense, shall keep the Easement Area and all aspects of all improvements placed thereon by Grantee in good order, repair and condition. Grantee shall be responsible for all snow and ice removal from the Easement Area. Grantee shall be responsible for damage to the Fixtures, if any, arising from or out of the use by Grantee of the Easement Area, whether or not Grantee may have acted negligently. Grantee shall immediately repair any damage done to any facilities comprising or protecting the Easement Area, if any, occurring from the elements, vandalism or damage by other causes. If Grantee fails

to do so, Grantee shall pay to Amtrak all costs imposed, incurred by Amtrak or both for damage resulting from such failure, which obligation shall survive the termination of this Agreement.

4.4 No Waiver. If Amtrak at any time makes any repairs, renewals or alterations to Amtrak's Fixtures, such action shall not constitute a waiver of Grantee's obligations relative to maintenance and repairs to the Easement Area and the Fixtures pursuant to Section 4.3. Grantee also shall pay to Amtrak upon demand all fees and expenses, including reasonable attorneys' fees, incurred in connection with Amtrak enforcing its rights to make any repairs, maintenance, renewals or alterations to the Easement Area.

4.5 Grantee Improvements. Grantee shall keep all Grantee Improvements (as such term is defined in this Agreement), and any associated equipment or improvements constructed or placed upon the Easement Area by Grantee, in good order, repair and safe condition, it being understood and agreed that all such Grantee Improvements are the personal property of Grantee, and Grantee shall continue to own all Grantee Improvements after the termination of this Agreement, except as provided otherwise in Section 13.2 of this Agreement.

4.6 Utilities. Grantee, at its sole cost and expense, shall arrange for and obtain all necessary utility services required for its use. Nothing in this Article is intended to nor will be construed to obligate Amtrak to provide any such services.

4.7 Landscaping. Grantee shall maintain in a neat and healthy condition all landscaping, foliage and plant material, if any, within the Easement Area and ensure that they will not extend beyond or overhang the boundary lines of the Easement Area. If Grantee fails to so maintain the landscaping, foliage and plant material, Amtrak may perform or cause to be performed such maintenance and Grantee shall pay for the expenses incurred by or imposed on Amtrak for performing such maintenance within thirty (30) days after a bill is rendered therefor.

4.8 Fence. If, in Amtrak's sole judgment, a fence or barricade is required at any time to separate the Easement Area from the remainder of, or any portion of, the Amtrak Property, Grantee shall, at its sole expense, construct and maintain a fence or barricade, with a lockable gate to be controlled by Amtrak, along the boundary lines of the Easement Area in a location, style, design and construction acceptable to Amtrak. The installation, maintenance and repair of any fence or barricade required by Amtrak shall not unreasonably interfere with Grantee's operations or Grantee's use of the Easement Area.

4.9 Compliance with Laws. The Parties shall comply with all laws, ordinances, rules and regulations and requirements of all Federal, state, local or other governmental authorities and the various departments and quasi-governmental agencies thereof now existing or hereafter created, including without limitation, the Americans with Disabilities Act, so far as the same may affect the Easement Area. In connection therewith, the Parties shall take all actions necessary to comply with said laws, ordinances, rules, regulations and requirements.

4.10 Clearance of Right of Way. In connection with the use of the Easement Area, Grantee shall observe and be bound by the rules of Amtrak with respect to standard clearances for all railroad tracks located on or adjacent to the Easement Area. Grantee further covenants and that it shall not do or permit anything to be done on the Easement Area that will adversely affect the railroad tracks or railroad operations on Amtrak's Property. If Amtrak has knowledge that Grantee is fouling Amtrak's tracks in violation of any such requirements, whether such knowledge is actual or implied, such knowledge will not constitute a waiver and will not relieve Grantee of its obligations to indemnify Amtrak for all liability and claims resulting from any such violations.

5. GRANTEE IMPROVEMENTS

5.1 The Parties previously executed PI 184 and PI 184A approving Grantor services for the design and construction of Grantee Improvements. In the event the terms or conditions of PI 184 or PI 184A conflict with this Agreement, the terms and conditions of this Agreement shall control. However, a discrepancy shall not be deemed a conflict if it is possible to comply with each PI and agreement.

5.2 Submittal of Plans. Prior to disturbing any soil or commencing any excavation, construction, alteration, modification, repairs or improvements on, under, over or to the Easement Area, ("Grantee's Work") Grantee shall submit to Amtrak plans (including, without limitation, design drawings and specifications, schedules, estimates of costs and such other matters as Amtrak may request) (the "Plans") of Grantee's proposed improvements to the Easement Area (as and when constructed, together with Grantee's existing improvements within the Easement area, "Grantee Improvements").

5.3 Review of Plans. Amtrak may accept or reject the Plans in Amtrak's sole discretion. As a condition to any approval of the Plans, Amtrak may require Grantee to execute, and cause its contractors to execute, all documents required by Amtrak, including, but not limited to, force account agreements, permits to enter, preliminary engineering agreements (including, but not limited to, PI(s) issued under any master agreement between the Parties), site access agreements, ("Engineering Agreements"). In connection with the Plan review, the Grantor, in its sole discretion, will consider waiving the requirement of design and construction engineering agreements, PTEs and certain other items ordinarily required in connection with work on Grantor Property if the Grantor determines that such work, including the construction of drainage facilities, even if poorly designed and/or constructed, would likely not negatively impact Grantor's operations and/or infrastructure. Grantee shall pay for all costs related to Amtrak's review of Plans in accordance with the invoices and schedules that Amtrak provides. Plans that Amtrak approves shall be the "Approved Plans". Grantee acknowledges that Amtrak has other work commitments and demands that may preclude Amtrak from reviewing the Plans according to Grantee's schedule and agrees that Amtrak will not be held liable for any damages whatsoever related to delays to Grantee's schedule or Grantee's Work due to any delay in the approval of the Plans.

5.4 Cost and Performance. Grantee shall ensure that Grantee's Work (i) is performed at no cost to Amtrak and (2) conforms to the Approved Plans and the Engineering Agreements. If Amtrak determines that conditions so warrant at any time, Amtrak will provide flagmen, watchmen, inspectors, or other personnel who are deemed necessary in the opinion of Amtrak for the safeguarding of Amtrak's railroad operations and Amtrak Property, at the sole cost and expense of Grantee, and Grantee shall pay to Amtrak the full cost and expense therefor. Engineering Agreements may contain provisions, including without limitation, indemnity and insurance provisions that are more or less stringent than the requirements in this Agreement. Any default or breach of the Engineering Agreements will constitute a default and breach of this Agreement. Grantee shall, and shall cause its contractors to comply with, the Engineering Agreements, and all of Amtrak's then current safety, operations, security, environmental and engineering procedures.

6. LIENS AND CHARGES

6.1 Discharge of Liens. Neither Grantee's work nor any other work of any nature performed by Grantee related to the Easement Area is intended to be or will be deemed to be for the use or benefit of Amtrak. Grantee shall not permit a mechanic's or other lien to be filed against any property or interest of Amtrak. If any such lien is filed, Grantee shall, within twenty (20) days of the attachment of any such lien or encumbrance, discharge or cause such lien to be discharged.

6.2 No Consent. Nothing in this Agreement will be deemed or construed in any way as giving Grantee any right, power or authority to contract for or permit the rendering of any services or the furnishing of any materials that would give rise to the filing of any lien against the Easement Area or any part thereof, nor as evidencing Amtrak's consent that the Easement Area may be subject to any mechanic's, laborer's or materialman's lien.

7. SIGNS

Permitted Signage. Grantee, at its sole cost, may place signs relating to its commuter rail service, including but not limited to, advertisements, vehicular and pedestrian traffic, safety and security in the Easement Area. Grantee shall comply with all applicable laws, rules, and regulations of all governmental agencies having jurisdiction thereof and pay all permit and license fees relating to the placement of any Grantee signs.

8. HAZARDOUS USE

8.1 Insurance Requirements. Grantee shall comply with all applicable regulations, recommendations, rules and requirements of Amtrak and any insurance carrier which insures or participates in insuring the Easement Area. Grantee shall not permit any article to be brought upon or any act to be done upon or about the Easement Area that will cause cancellation of any policy of insurance thereon or increase rates for such insurance beyond those usually charged for similar properties used for the purpose herein authorized.

8.2 Explosive or Flammable Materials. Without limiting the generality of the foregoing, except for gasoline for use in the gas tanks of the motor vehicles of Grantee's employees and contractors, Grantee shall not use or keep gasoline, dynamite or other explosive or flammable materials in any form upon the Easement Area, or bring upon, store or allow to be stored upon the Easement Area any materials of a dangerous or highly flammable nature or of such nature as to cause an extra fire risk or hazard, and will comply with all such reasonable rules and regulations as Amtrak may prescribe, looking to prevention of fires and compliance with insurance policies.

9. ENVIRONMENTAL

9.1 "Environmental Law" Defined. For the purpose of this Agreement, "Environmental Law" means, without limitation, all applicable laws, statutes, codes, acts ordinances, orders, judgments, decrees, injunctions, and requirements of all federal, state and local governments, departments, commissions, boards, bureaus, courts, authorities, agencies, officials and officers, relating in any manner or way to:

(a) soil, water, air, noise, other environmental standards or

(b) the control and/or abatement of environmental pollution and/or environmental hazards, which now or at any time hereafter may be applicable, or claimed to be applicable, whether or not the claim is or is not determined to be well-founded.

9.2 Compliance with Environmental Law. Grantee shall use and maintain the Easement Area in full compliance with Environmental Law. Grantee shall not store or permit to be stored any hazardous waste on the Easement Area. If Grantee fails to comply with any Environmental Law, Amtrak may, after giving Grantee reasonable notice of such failure, and in addition to any other remedies hereunder or at law or in equity, act to bring the Easement Area into compliance, and Grantee shall repay to Amtrak all costs incurred by Amtrak in connection therewith including, but not limited to, fines, consulting, engineering, construction, evacuation, excavation, removal, remediation and legal costs. In the event of emergency or lawful government order, Amtrak may bring the Easement Area into compliance immediately at Grantee's expense. In such event, Amtrak will notify Grantee as soon as feasible of the emergency and/or governmental order, and provide Grantee with the opportunity to participate in all necessary actions to bring the Easement Area into compliance.

9.3 Remedies. If Grantee fails to comply with any Environmental Law, in addition to any other remedies it may have hereunder or at law or in equity, Amtrak may act to bring all affected portions of the Easement Area into compliance. Grantee shall repay to Amtrak all costs incurred by Amtrak in connection therewith. Amtrak will notify Grantee before undertaking action but in the event of emergency or lawful government order, Amtrak retains the right to bring the affected portions of the Easement Area into compliance immediately at Grantee's expense. In such event, Amtrak will notify Grantee as soon as feasible of the emergency and/or governmental

order, and provide Grantee with the opportunity to participate in all necessary actions to bring the affected Easement Area into compliance.

9.4 Notice of Non-Compliance with Environmental Law. In the event Grantee's use of the Easement Area causes a condition of non-compliance to occur (including but not limited to instances of spills), Grantee shall notify Amtrak of such condition, including: The nature of the non-compliance, the reporting (if any) of the condition to the appropriate governmental agency, and the actions undertaken by Grantee to cure the non-compliance. Such notice to Amtrak will be made as soon as practicable, but in no instance will it be more than two days following the event of non-compliance.

9.5 Soil Disturbance Prohibited.

9.5.1 Grantee (and its contractors and agents) shall not disturb the soil or perform any environmental or geotechnical testing on the Easement Area for any reason without (i) notifying Amtrak of its desire to do so; (ii) discussing the nature and extent of the proposed soil disturbance or testing with the Amtrak Environmental and Sustainability Group (or its successor); (iii) presenting a proposed testing and sample collection and analysis plan to Amtrak for its review and approval; (iv) obtaining the express permission of Amtrak to conduct the agreed-to soil disturbance or testing; and (v) indicating if any such test results require either notification or submission to a federal, state or local regulatory agency. Amtrak shall have the right, but not the obligation, to be present at any and all such soil disturbance or testing activities and to take split samples.

9.5.2 Grantee shall immediately provide Amtrak with a copy of the test results at no cost to Amtrak.

9.5.3 Any contractor engaged by Grantee to perform such soil disturbance or testing shall execute Amtrak's temporary permit to enter agreement before performing any such activities.

9.5.4 Grantee, its contractors and agents shall comply with all applicable federal, state, and local laws, regulations, ordinances, and orders concerning the environment and/or waste generation and disposal. At all times, they shall employ best management practices ("BMPs") in connection with the performance of their work. As used herein, the term "BMPs" means effective, practical, structural and/or nonstructural methods which prevent and/or reduce the movement of sediment, nutrients, pesticides and other pollutants from the land to surface and/or groundwater, and/or which otherwise protect air, soil and water quality from potential adverse effects.

9.5.5 If the soil disturbance or the environmental or geotechnical tests performed on the Easement Area indicate contamination of Amtrak property (or property adjoining Amtrak property) at levels requiring reporting, further investigation, testing, monitoring and/or remediation as required by the New Jersey Department of Environmental Protection, the United States Environmental Protection Agency or any other regulatory agency of competent jurisdiction ("Environmental Activities"), all such Environmental Activities within the Easement Area shall be at the sole cost and expense of Grantee, regardless of the extent thereof, and regardless of whether any action of Grantee (or its contractors or agents) caused or contributed to the contamination or condition.

9.5.6 Grantee shall promptly inform Amtrak of all communications with any governmental authority relating to any such Environmental Activities, and Amtrak shall be invited to attend any relevant meetings. Grantee shall provide Amtrak with all plans and/or submissions for any such Environmental Activities and Amtrak shall have the right to approve such plans and/or submissions prior to their implementation. Grantee will promptly provide Amtrak with a copy of any waste manifests, and such waste manifests shall in no event identify Amtrak as a generator. Amtrak reserves the right to require Grantee to provide to Amtrak a copy of the results of any further tests conducted by or for Grantee on any such wastes. Amtrak also reserves the right to review and approve the disposal site for any such wastes. Grantee (and its contractors and agents) shall dispose of all waste and contamination using their own EPA generator number(s). In no event shall Amtrak be identified as the generator. Grantee will promptly provide Amtrak with a copy of any waste manifests.

9.5.7 Amtrak retains the right to alter, suspend, cancel or otherwise modify Grantee's project work schedule pending the resolution of any of the above environmental issues. Amtrak shall not be held responsible for any claims related to any such changes in Grantee's schedules, including without limitation, claims related to damages resulting from any such delays or cancellations.

9.5.8 Amtrak may notify Grantee of any known or suspected noncompliance with the foregoing provisions and the action to be taken. Grantee shall, after receipt of such notice, promptly take corrective action in accordance with all applicable federal, state and local requirements. If Grantee fails or refuses to comply promptly, Amtrak may issue an order stopping all or part of the project work until satisfactory corrective action has been taken. In addition, Amtrak may immediately undertake necessary corrective actions; the cost and expense of all such actions shall be borne by Grantee. No claims by Grantee for reimbursement related to costs and expenses charged to Grantee for

corrective actions undertaken by Amtrak, nor time lost due to any such orders, shall be made the subject of a claim for excess costs or damages by Grantee.

9.6 Environmental Conditions Report. Grantee shall pay for all costs and expenses associated with the performance of an "Environmental Conditions Report" of the Easement Area, which may be required at Amtrak's sole discretion, upon the expiration or other termination of this Agreement. Such Environmental Conditions Report, conducted by Amtrak or a recognized engineering firm at Amtrak's discretion, will be for the purpose of determining the extent of any environmental impairment caused by Grantee's use and occupancy of the Easement Area.

9.7 Survival. The provisions of this Article will survive the termination of this Agreement.

10. INDEMNIFICATION

10.1 Amtrak will, without regard to negligence or fault, indemnify and hold NJ TRANSIT harmless from and against any and all claims for liability for personal injury, death or property damage by Amtrak employees arising in the course of their employment and by ticketed Amtrak passengers whose claims arise as a result of an act or occurrence on the Easement Area.

10.2 Each party will, without regard to negligence or fault, indemnify and hold the other harmless from and against any and all claims for liability for personal injury, death or property damage by any person (other than employees or ticketed passengers of a Party) alleging injury or damage occurring on the Grantor Property maintained by that Party as set forth herein. For the purposes hereof, the Easement Area shall be deemed to be maintained by NJ TRANSIT.

10.3 NJ TRANSIT will, without regard to negligence or fault, indemnify and hold Amtrak harmless from and against all claims for liability for personal injury, death or property damage by NJ TRANSIT employees arising in the course of their employment or by ticketed NJ TRANSIT passengers whose claims arise as a result of an act or occurrence on the Easement Area.

10.4 Each Party agrees to provide the other prompt notice of all claims or suits wherein the other Party is or may be liable under this indemnity provision. Each Party agrees further to provide an indemnifying party full cooperation in the investigation of defense of any claim or suit covered herein.

11. INTENTIONALLY DELETED

12. INSURANCE

Procurement and Maintenance of Insurance. The Grantee shall procure and maintain or cause its contractors to procure and maintain, at all times during the term of this Agreement, at its own cost and expense, the insurance specified below. All insurance required pursuant to the terms hereof ("Required Insurance") shall be placed with insurance carriers licensed to do business in the state where the Easement Area is located. The Grantee shall furnish a certificate of insurance giving evidence of the Required Insurance coverage prior to the exercise of this Agreement and on an annual basis thereafter. All Required Insurance shall provide for thirty (30) days' prior written notice to be given to the Grantor in the event coverage is substantially changed, canceled, or non-renewed. No acceptance of an insurance certificate required hereunder shall constitute or be construed as a waiver of the insurance requirements of this article, which shall be and remain the sole responsibility of the Grantee as to compliance therewith. If this Agreement exceeds five (5) years, the Grantor reserves the right to periodically reasonably modify the conditions/limits of insurance listed herein to maintain coverage in accordance with railroad industry standards with forty-five (45) days notice to Grantee. The Required Insurance shall be as follows:

(a) General Liability/Railroad Liability Insurance. General Liability or Railroad Liability insurance covering the Grantee, and the employees, officers, agents, contractors, subcontractors, and representatives of the Grantee on a primary basis with the following limits and for the following risks and hazards:

(1) Excess Liability insurance covering third party claims against and liabilities of Grantee, its agents, and employees for property damage, bodily injury, personal injury and death for which the Grantee is required to indemnify the Grantor with a combined single limit not less than the liability ceiling set forth in 49 U.S.C. Section 28103(a)(2) [or a liability cap set forth in a successor or similar statute], as adjusted from time to time by the United States Secretary of Transportation (or such successor or similar officer).

(2) Intentionally Deleted.

(3) The Required Insurance shall include, but not by way of limitation:

(A) Contractual Liability coverage endorsed to confirm that this Agreement is an insured contract under the policy(ies) with no exclusion or restriction related to railroad operations or work within fifty (50) feet of a railroad;

(B) Cross Liability endorsement;

(C) Premises/Operations;

(D) Products/Completed Operations;

(E) Independent Contractors;

(F) Sudden and Accidental Pollution (30/90);

(G) Punitive and Exemplary Damages shall not be excluded, or the policies may be silent regarding such damages;

(H) Certified and Non-certified Terrorism; and

(I) Any Explosion Collapse, and Underground (X-C-U) exclusions.

(4) The Grantor and its employees, officers, agents, contractors, subcontractors, representatives, and commuter agencies and railroads operating in the vicinity of the Easement Area (collectively with Grantor, "Additional Insured Parties") shall be endorsed as additional insured on all policies comprising the Required Insurance.

(5) Intentionally Deleted.

(6) In the event that the policy limits for the Required Insurance are satisfied by a combination of primary and excess policies in "layers," all excess policies shall provide that they drop down in the event of reduction or exhaustion of underlying policy limits.

(7) Intentionally Deleted.

(8) If any of the Required Insurance (that is not required to be provided on an occurrence basis) is provided on a claims-made or occurrences-reported basis, then, in addition to coverage requirements above, such policy shall provide that:

(A) The retroactive date shall coincide with or precede the effective date of this Agreement, or the effective (inception) date of the first such policy that was written on a claims-made or occurrences-reported basis. If any insurance that was previously written on a claims-made or occurrences-reported basis is subsequently written on an occurrence basis,

the Grantee shall procure "prior acts" coverage on the new occurrence policy(ies) with a retroactive date, and with effect for all occurrences not known or reported under the preceding claims-made and occurrences reported policies.

(B) The policy shall allow for the reporting of circumstances or incidents that might give rise to future claims; and

(C) If claims-made or occurrences-reported insurance is terminated for any reason, the Grantee shall purchase an extended reporting provision of at least two (2) years to report claims and occurrences arising from the Easement, unless such coverage is not commercially available, in which case a shorter extended reporting provision will be mutually agreed to by Amtrak and NJ TRANSIT.

(b) Property Insurance. All risks property insurance, covering all damage to the Grantee property. Coverage will be on a replacement cost basis and also include coverage for train derailment or overturn, flood and earthquake.

(c) Automobile Insurance. Automobile liability insurance covering all automobiles owned, leased, rented, or used by the Grantee, its contractors, agents and employees, in connection with this Agreement or any operations or activities incidental thereto. Such insurance shall provide auto liability insurance coverage with combined single limits of no less than two million dollars ($2,000,000) per accident or occurrence for bodily injury and property damage liability.

(d) Workers Compensation and Employers Liability Insurance. The Grantee - will require and ensure that its contractors and subcontractors to carry workers compensation insurance in accordance with the laws of New Jersey covering all applicable employees. Such insurance shall include Employers Liability coverage with limits of no less than one million dollars ($1,000,000) each employee or accident. If the Grantee or any of its contractors or subcontractors are considered a railroad(s) subject to the provisions of the Federal Employers Liability Act ("FELA") rather than state workers compensation laws, the employers liability insurance or excess liability insurance shall be endorsed to provide coverage for FELA benefits and liabilities, and the required limits shall be increased to not less than fifty million dollars ($50,000,000) per occurrence.

(e) Construction and Maintenance Activities. Prior to the commencement of any development, construction, reconstruction, maintenance, or repair activities on the Easement Area, the Grantee, will require their contractors and subcontractors to obtain the insurance coverage specified in Exhibit D attached hereto, and incorporated herein; or the Grantee, or their contractors may, at their option, provide the coverage for any or all contractors and subcontractors, providing that the evidence of insurance submitted by the Grantee, provided, however, that the foregoing requirements shall not apply to routine maintenance, routine replacement, or minor repairs

performed by the Grantee, or the Grantee' tenants, contractors, or subcontractors, and for which the Grantee do not require flagging protection. It is agreed that insurance required pursuant to this Section shall be considered as Required Insurance.

(f) Intentionally Deleted.

(g) Self Insurance. The Grantee shall have the right to self-insure with respect to the insurance required in this Section provided the same does not thereby decrease the insurance coverage or limits required or adversely affect the protection afforded to the Grantor or any of the Additional Insured Parties.

(h) Certificates. The Grantee shall furnish certificates of insurance if insurance is purchased, or a statement of compliance with this Section through self-insurance, evidencing compliance with the requirements set forth in this Section contemporaneously with the effective date of this Agreement, and annually thereafter. The policies shall be endorsed to (1) provide that the policy shall not be cancelled or coverage reduced without thirty (30) days prior written notice of cancellation, non-renewal or other material change to the Grantor - and (2) name the Additional Insured Parties, as additional insureds with respect to occurrences relating to the Grantee' operations.

(i) Erosion of limits. In the event that paid claims, losses or occurrences reduce limits to less than eighty percent (80%) of the combined single limit set forth in Section 12(a)(1) per occurrence, due to the operation of an aggregate limit provision in the policies, the Grantee - shall immediately notify the Grantor- and shall reinstate or replace the insurance to the required limits.

(j) Insurance not a limitation on indemnity. The foregoing insurance coverage is not intended to, nor does it, limit the liability of Grantee to defend, indemnify and hold harmless as set forth in the indemnity provisions herein.

(k) Survival. The Grantee responsibility under this Section shall apply to any liability arising out of an accident or other incident occurring on or after the effective date of this Agreement, and shall extend beyond the date of termination of this Agreement with respect to any event occurring or liability arising during the term of this Agreement; provided, however, that as respects any required liability insurance provided on a claims-made or occurrences-reported or similar basis, the Grantee, as applicable, shall comply with the provisions of Section 12(a)(8) and 12.4 of this Agreement.

12.4 Additional Terms. If any liability insurance specified above will be provided on a claims-made basis, then in addition to the coverage requirements above, such policy will provide that: (i) The retroactive date will coincide with or precede Grantee's entry onto the Easement Area or other Amtrak property (including subsequent policies purchased as renewals or replacements);

(ii) The policy will allow for the reporting of circumstances or incidents that might give rise to future claims; (iii) Grantee shall use its best efforts to maintain similar insurance for at least three (3) years following the completion of Grantee' operations on the Easement Area or other Amtrak property, including, without limitation, the requirement of adding Additional Insured Parties as additional insureds; and (iv) If the insurance is terminated for any reason, Grantee agrees to purchase an extended reporting provision of at least two (2) years to report claims arising from its operations on the Easement Area or other Amtrak property. Further, any additional coverages required by the United States Department of Transportation, the Environmental Protection Agency and/or related state and local laws, rules and regulations shall be complied with.

12.5 Compliance with Amtrak's Insurance. Grantee and its contractors shall comply with all regulations, recommendations, rules and requirements of Grantor and any insurance carrier which insures or participates in insuring the Property and Grantee shall not knowingly permit any article to be brought upon or any act to be done upon or about the Property that shall cause cancellation of any policy of insurance thereon or increase rates for such insurance beyond those usually charged for similar properties used for the purpose herein authorized.

13. TERMINATION DUE TO ABANDONMENT.

Termination Due to Abandonment. Said Easement shall automatically terminate upon the Grantee's Abandonment of commuter operations in the Easement Area. "Abandonment" shall mean Grantee's formal abandonment of its operation of commuter rail service.

14. INTENTIONALLY OMITTED.

15. ASSIGNMENT

Successors and Assigns. Grantee may not assign this Agreement or any of the rights hereunder, to any entity other than another commuter railroad, without the prior consent of Amtrak which consent Amtrak may grant, deny or condition in Amtrak's sole discretion.

16. DEFAULT AND REMEDIES

16.1 Events of Default. The occurrence of any of the following events will constitute an Event of Default by Grantee:

16.1.1 Grantee fails to pay to Amtrak as and when due any sum payable to Amtrak by Grantee under this Agreement;

16.1.2 failure to maintain any insurance required to be maintained by either Grantee or any of Grantee's contractors;

16.1.3 Intentionally Deleted;

16.1.4 After the commencement of construction of any Grantee Improvements, if the Grantee fails to diligently proceed with construction of said improvements for one hundred eighty (180) days or longer. For the purposes of this provision, any delay due to the inability of Amtrak to dedicate the personnel or resources necessary to support the construction project shall not be deemed a failure to proceed. This provision is also specifically subject to the force majeure terms set forth in Section 17.9 herein below.

16.1.5 a default occurs and continues beyond any applicable cure period under any of the Engineering Agreements;

16.1.6 if Grantee fails to perform or comply with any other terms or covenants contained in this Agreement;

16.1.7 if Grantee files, or suffers to be filed against it, a petition in bankruptcy and fails to have any involuntary filing dismissed within sixty (60) days after the date of such filing;

16.1.8 if Grantee is declared insolvent by a court of competent jurisdiction, or a receiver or trustee is appointed for the Grantee;

16.1.9 if Grantee makes any general assignment for the benefit of creditors.

16.2 Prior to a declaration of Default pursuant to Section 16.1.1, 16.1.4 or 16.1.6, Grantor shall provide Grantee with ninety (90) days' prior notice of Grantee's noncompliance hereunder. Grantee shall perform, cure or comply with the terms or conditions resulting in the Event of Default, within ninety (90) days following receipt of written notice by Amtrak giving notice of such default, or if such cure is not capable of being made with such ninety (90) day period, Grantee shall commence to cure such failure within such ninety (90) day period and thereafter continue to duly prosecute such cure to completion. During such cure period, upon the written request of either Party, submitted pursuant to the terms of the Notice provisions set forth below, the other Party will make a senior officer of such Party available to discuss the matter in an attempt to amicably resolve any Default dispute.

16.3 Remedies. Upon the occurrence of an Event of Default, Amtrak may take any or all actions, rights or remedies available to Amtrak at law or in equity.

16.4 No Waivers. No action or remedy taken or omitted by Amtrak following an Event of Default will be deemed a waiver of such Event of Default and an express waiver of any particular Event of Default will not be deemed a waiver of any other Event of Default, nor will any failure on the part of Amtrak to compel a fulfillment of any one or more of the covenants,

terms and conditions herein contained be held to be a waiver of its right to enforce the same at any time thereafter during the term this Agreement.

16.4 Waiver of Jury Trial. The Parties do hereby waive trial by jury in any action, proceeding or counterclaim brought by either party against the other on any matter whatsoever arising out of or in any way connected with this Agreement or Grantee's use of the Easement Area or arising out of or in any way connected with any claim of injury or damage arising out of or in connection with this Agreement or such use.

17. MISCELLANEOUS

17.1 Notices. Every notice, consent, approval, or other communication that may or is required to be given, served or sent by one party to the other party pursuant to this Agreement is required to be in writing and shall be given by United States certified or registered mail, return receipt requested, or by a nationally recognized overnight delivery service, with all delivery and postage prepaid. Notices are deemed to have been given on the day actually received or refused, or if unclaimed, on the third day following the day on which the same will have been sent by a nationally recognized overnight delivery service or deposited with the United States Post Office.

Any such communication if intended for Grantee will be addressed as follows:

New Jersey Transit
One Penn Plaza East
Newark, New Jersey 07105
Attention: Elizabeth Station Program Manager, Capital Projects and Programs

With a copy to:

New Jersey Transit
One Penn Plaza East
Newark, New Jersey 07105
Attention: Senior Director, Capital Projects and Programs

And

New Jersey Transit
One Penn Plaza East
Newark, New Jersey 07105
Attention: Senior Director, Real Estate

Any such communication if intended for Amtrak will be addressed as follows:

National Railroad Passenger Corporation
30th Street Station
2955 Market Street
Philadelphia, PA 19104
Attention: Senior Director, Real Estate Development

With a copy to:

National Railroad Passenger Corporation
1 Massachusetts Avenue, NW
Washington, DC 20001
Attention: General Counsel

And

National Railroad Passenger Corporation
30th Street Station
2955 Market Street
Philadelphia, PA 19104
Attention: Chief Engineer

Either party may, any time, change its address for the above purposes by sending a written notice to the other party stating the change and setting forth the new address. Any notice that may or is required to be given by either party in connection with this Agreement may be given by such party's attorney.

17.2 Subordination. This Agreement and the Easement is subject and subordinate to all restrictions, agreements and easements of record, and Amtrak does not provide any warranty of title with respect to the Easement Area. This Agreement and the Easement is also subject and subordinate to any or all existing ground leases of record, if any, and to any or all existing mortgages of record which may now or hereafter affect such leases or the real property of which the Easement Area forms a part, and to all renewals, modifications, consolidations, replacements and extensions thereof. This Easement is expressly subject and subordinate to Grantor's existing mortgage in favor of the United States of America. This Easement Agreement shall not be subordinate to any future ground lease or mortgage unless such owner or holder of the ground lease or mortgage signs a nondisturbance agreement in favor of Grantee in commercially reasonable form. This clause will be self-operative and no further instrument of subordination will be required by any mortgagee. However, in confirmation of such subordination, Grantee will execute promptly upon request any certificate to that effect upon request by Amtrak.

17.3 Not a Joint Venture. It is understood and agreed that neither this Agreement nor the agreements herein contained are intended, nor are the same ever to be construed, so as to create

a partnership by and between Amtrak and Grantee, or to make Amtrak and Grantee joint venturers, or to make Amtrak in any way liable or responsible for the debts or losses of the Grantee.

17.4 No Change or Modification. No change or modification of any of the covenants, terms or provisions hereof will be valid unless in writing and signed by the Parties hereto.

17.5 Incorporation of Terms. This Agreement, along with any exhibits and amendments hereto, encompasses the entire real estate agreement of the Parties related to the conveyance of the Easement, and supersedes all previous understandings and agreements between the Parties, whether oral or written. The Parties hereby acknowledge and represent that said Parties have not relied on any representation, assertion, guarantee, warranty, collateral contract or other assurance, except those set out in this Agreement, made by or on behalf of any other Party or any other person or entity whatsoever, prior to the execution of this Agreement. The Parties hereby waive all rights and remedies, at law or in equity, arising or which may arise as the result of a Party's reliance on such representation, assertion, guarantee, warranty, collateral contract or other assurance. Notwithstanding the foregoing, the Parties acknowledge there are Engineering Agreements related to the Grantee Improvements intended to be constructed on the Easement Area.

17.6 Severability. The provisions of this Agreement are severable and it is the intention of the Parties hereto that if this Agreement cannot take effect in its entirety because of the final judgment of any court of competent jurisdiction holding invalid any part or parts thereof, the remaining provisions of the Agreement will be given full force and effect as completely as if the part or parts held invalid had not been included therein.

17.7 Governing Law/Venue. This Agreement will be governed by and construed under the laws of the State of New Jersey, and all disputes related to this Agreement will be exclusively adjudicated in the federal courts with jurisdiction over New Jersey.

17.8 Responsibility of Grantee for its Employees. Grantee, in the performance of any and all work by Grantee under the terms of this Agreement or otherwise, upon or adjacent to the Easement Area, will furnish all labor and supervisory forces of every kind. Grantee shall employ or contract, and pay from Grantee's own funds all persons or contractors engaged in the performance of such work and all such persons or contractors will be and remain the sole employees or contractors, as the case may be, of Grantee and subject to Grantee's supervision, direction and control.

17.9 Force Majeure. Each Party will be excused from performance of any of its obligations hereunder except obligations involving the payment hereunder of money to the other Party, where such nonperformance is occasioned by any event beyond its control which shall include, without limitation, any order, rule, or regulation of any federal, state, or local government body, agent, or instrumentality, work stoppage, accident, terrorist attack, natural disaster, or civil disorder; provided, that the Party excused hereunder shall

useallreasonable efforts to minimize its nonperformance and to overcome, remedy, or remove such event in the shortest practical time.

17.10 Authority. Each Party hereby covenants that it has full power and authority to enter into this Agreement upon the terms and conditions set forth herein. Each of the persons executing this Agreement on behalf of each Party does hereby covenant and warrant that each person signing on behalf of Amtrak or Grantee, as applicable, is authorized to do so and that no other actions are needed by such Party to make this Agreement valid and binding on such Party other than the execution and delivery by the person(s) executing this Agreement.

17.11 Limitation of Liability. Grantee acknowledges and agrees that the liability of Amtrak (which for purposes of this Article will include all officers, directors, employees and shareholders of any corporation) under this Agreement will be limited to Amtrak's interest in the Easement Area and any judgments so rendered will not give rise to any right of execution or levy against Amtrak's other assets or on any assets of any other person or entity. The provisions hereof will inure to Amtrak's successors and assigns including any Mortgagee.

17.12 Equal Opportunity.

17.12.1 Grantee shall not discriminate against any employee or applicant for employment because of race, color, religion, sex, age, or national origin, handicap or veteran status. Grantee shall take affirmative action to ensure that applicants are employed, and that employees are treated during employment, without regard to their race, color, religion, sex, age or national origin, handicap or veteran status. Such action will include, but not be limited to the following: employment, upgrading, demotion, or transfer; recruitment or recruitment advertising; layoff or termination; rates of pay or other forms of compensation; and selection for training, including apprenticeship. Grantee agrees to post in conspicuous places, available to employees and applicants for employment, notices setting forth the provisions of this Equal Opportunity clause.

17.12.2 Grantee shall comply with all provisions of the Executive Order No. 11246 of September 24, 1965, as amended by Executive Order No. 11375 of October 13, 1967, and of the rules, regulations and relevant orders for the Secretary of Labor, all of which are copies incorporated herein by reference.

17.13 Brokers. The Parties represent and warrant that it knows of no real estate broker, salesperson or other party having a right to commission in connection with the transaction under this Agreement or who may be otherwise entitled to any payment or other compensation in connection with such transaction. The Parties agree to indemnify and each other harmless from

any costs, expenses and liability resulting to one Party as a result of any claims made by any broker or other Party because of this transaction.

17.14 Lawfulness of Use. Neither any statement by Amtrak in this Agreement as to Grantee's utilization of the Easement Area nor any consent of Amtrak of such utilization will be deemed or construed to constitute a representation or warranty by Amtrak that any such utilization that may be conducted in or on the Easement Area is lawful or permissible.

17.15 Covenants To Run With Land. The agreements and covenants contained herein will run with the land and this Agreement will be binding upon and inure to the benefit of the parties hereto and their respective heirs, executors, administrators, successors and assigns.

17.16 Intentionally Deleted.

17.17 All potential liability of Grantee hereunder shall, to the extent applicable, be further subject to the provisions of the New Jersey Tort Claims Act, N.J.S.A. 59:1-1 et seq., and the New Jersey Contractual Liability Act, N.J.S.A. 59:13-1 et seq. No covenant, representation or obligation of the Grantee shall be deemed or construed to create or constitute a debt, liability or a loan or pledge to the credit of the State of New Jersey. Additionally, nothing herein shall be deemed to waive Amtrak's rights under Federal law.

SIGNATURES APPEAR ON THE FOLLOWING PAGE

IN WITNESS WHEREOF, the Parties hereto have caused these presents to be executed by their proper officers, thereunto duly authorized, as of the day and year first above written.

DESCRIPTION OF PROPOSED EASEMENTS E2H & E2I
NEW JERSEY TRANSIT ELIZABETH STATION
CITY OF ELIZABETH, UNION COUNTY, NEW JERSEY

PROPOSED EASEMENT E2H

BEGINNING at a point in the northwesterly right of way line of lands now or formerly of the Pennsylvania Railroad as described in Deed Book 5468 Page 762, where the same is intersected by the easterly sideline of North Broad Street, variable width, said point being 51.25 feet right and northwesterly of United New Jersey Railroad and Canal Company Baseline Station 687+91.77 as shown on "New Jersey Transit Corporation ELIZABETH STATION PENN CENTRAL (U.N.J.R.R. & CANAL CO.)" M.P. #14.5 Line Code #1401, Revised May 26, 1982, G-1664, said point having a New Jersey State Plane Coordinate of NAD83 of North: 668366.9 East: 571094.5 (US Survey Feet measured in 2010); and runs thence the following two (2) courses along said right of way line described in Deed Book 5468 Page 762.

1. North 28 degrees 38 minutes 23 seconds East 270.71 feet to an angle point; thence
2. North 28 degrees 40 minutes 42 seconds East 304.52 feet to a point on the southerly sideline of Chestnut Street, being 25 feet southwesterly as measured perpendicular from the centerline of Chestnut Street; thence
3. Along said southerly sideline of Chestnut Street, South 59 degrees 32 minutes 27 seconds East 28.12 feet to a point; thence
4. Southwesterly along a line being 5.58 feet (5 feet 7 inches) northwesterly as measured perpendicular to the centerline of the most westerly track, South 28 degrees 43 minutes 56 seconds West 587.54 feet to a point on the easterly sideline of North Broad Street; thence
5. Along said sideline, North 35 degrees 36 minutes 13 seconds West 30.38 feet to the point and place of BEGINNING.

Containing 16,153 square feet or 0.3708 acres of land.

DB6280 1002

PROPOSED EASEMENT E2I

BEGINNING at a point in the northerly sideline of East Broad Street, 70 feet wide right of way, 50.72 feet southeasterly and right of Baseline Station 668+23.90, said point having a New Jersey State Plane Coordinate of NAD83 of North 668289.7 East 571168.5 (US Survey Feet measured 2010); and runs thence

1. Along a line that connects said sideline of East Broad Street with the easterly sideline of North Broad Street, North 61 degrees 39 minutes 35 seconds West 26.66 feet to a point; thence
2. Northeasterly along a line being 5.58 feet (5 feet 7 inches) southeasterly as measured perpendicular to the centerline of the most southeasterly track centerline, North 28 degrees 44 minutes 58 seconds East 605.27 feet to a point on the southerly sideline of Chestnut Street, being 25 feet southwesterly as measured perpendicular from the centerline; thence
3. Along said southerly line of Chestnut Street, South 59 degrees 32 minutes 27 seconds East 34.43 feet to a point on the southeasterly railroad right of way line set 40 feet southeasterly as measured perpendicular to the centerline of the most southeasterly track; thence
4. Along a said railroad right of way line, South 28 degrees 44 minutes 58 seconds West 565.74 feet to a point; thence
5. South 23 degrees 22 minutes 20 seconds East 17.40 feet to a point on the aforesaid northerly sideline of East Broad Street; thence
6. Along said sideline of East Broad Street, South 66 degrees 37 minutes 40 seconds West 35.00 feet to the point and place of BEGINNING.

Containing 20,966 square feet, 0.4813 acres of land.

The basis of bearings is the New Jersey State Plane Coordinate System (NAD83) measured November, 2010.

This description was prepared in accordance with a plan entitled, "PROPOSED EASEMENTS E2H & E2I FOR NEW JERSEY TRANSIT-ELIZABETH STATION CITY OF ELIZABETH UNION COUNTY, NEW JERSEY", prepared by Borbas Surveying and Mapping, dated December 18, 2017.

EXHIBIT C

GRANTORS' RESERVATIONS, USE CONDITIONS, REQUIREMENTS AND RESTRICTIONS

Without limiting any of the other provisions set forth in the Agreement, the following conditions will apply to the use of the Easement Area by Grantee hereunder.

1. Grantee shall not construct or permit the construction of any improvement on the Easement Area without first obtaining Amtrak's clearance requirements from Amtrak and Grantee covenants and agrees to abide by such clearance requirements; provided, however, that such clearances may be modified and adjusted to accommodate the Grantee Improvements, subject to the approval of Amtrak's Engineering Department as to property or improvements owned by Amtrak; clearance from property of others will be resolved between the Grantee and the third party owner.

2. Amtrak will retain access to any buried or overhead cables/conduits/utilities. Before and during any digging, paving or construction, all cables/conduits must be identified and protected by Grantee.

3. The Easement granted hereby will be under and subject to reservations and permanent rights in favor of Amtrak to enter in, on, upon, under or over the Easement Area to install, inspect, use, operate, maintain, repair, renew, replace and remove any and all communication and signal cables, duct lines and any and all sewer, pipe, wire, occupancies in, on, upon, under, or over the Easement Area, whether such occupancies now exist or will exist in the future or are recorded or not, together with the right, at Amtrak's sole discretion, to grant permanent easements and licenses in respect of such occupancies and uses and to retain all remuneration or revenues generated therefrom. Notwithstanding the foregoing, any new leases or licenses may not unreasonably interfere with Grantee's operations on the Easement Area.

4. All Amtrak support and safety protection costs associated with Grantee's use of the Easement Area will be at Grantee's expense. Grantee shall not be responsible for Amtrak support and safety protection costs associated with the use, operation, maintenance or improvements of Amtrak or third parties. Prior to their entry upon the Easement Area, all Grantee personnel and all personnel of Grantee's contractors and subcontractors, must at the sole cost and expense of Grantee and its contractors and subcontractors, respectively, attend any and all safety training required by Amtrak's Engineering Department.

5. Grantee shall ensure that all catenary structures of Amtrak, if any, will remain at all times accessible to Amtrak.

6. Grantee covenants and agrees with Amtrak that Grantee shall not erect, construct, excavate, repair or maintain any structure in, on or under the Easement Area that will materially, adversely affect the adjoining Fixtures, structures, railroad tracks or railroad operations conducted thereon, nor encroach upon, remove or weaken lateral support from the aforesaid railroad tracks. Grantee covenants and agrees with Amtrak that Grantee shall not do or permit to be done any other thing in, on or under the Easement Area that will materially, adversely affect the adjoining Fixtures, railroad tracks or railroad operations conducted thereon, nor encroach upon, remove or weaken lateral support from the aforesaid railroad tracks. The railroad viaduct supports, track alignment, ballast and abutments are not to be damaged or undermined by any excavation, construction or utility work performed on the Easement Area by the Grantee or its contractors. Nothing in this paragraph is intended to prevent Grantee from erecting the Grantee Improvements.

7. Grantee covenants and agrees that, except for any drainage adequately contained within appropriate drainage facilities, it will prevent any thing or any action on the Easement Area to cause drainage onto adjacent railroad tracks or any adjacent property including Amtrak's remaining property (excepting Grantee's adjacent property). Grantee shall prevent any action, which may cause erosion or damage to the adjacent railroad embankment or ballast or undermine the integrity of the Amtrak's railroad right-of-way. Grantee shall take all actions necessary to repair any such erosion or any undermining of the integrity of the adjacent property or railroad Fixtures.

8. Neither Grantee nor its contractors will operate any lifting or boom equipment within a 25 foot envelope around any transmission or catenary wires except with permission of Amtrak. Grantee shall coordinate with Amtrak and determine what precautions and procedures must be followed and procure any necessary assistance of Amtrak.

9. Before and during any digging, excavation, paving or construction on the Easement Area, Grantee must identify, locate and protect all buried utilities, cables, conduits, signal and communications facilities, all other buried facilities and all Fixtures. All such work must be performed in accordance with Amtrak's requirements for such work, including, without limitation, Amtrak's requirements regarding the distance that must be maintained between any such work and any signal or communication cables.

10. If any of Amtrak's improvements, fixtures, facilities or appurtenances must be relocated due to Grantee's project, Grantee shall relocate same per Amtrak's specifications at Grantees sole cost and expense.

11. The Easement granted hereby will be under and subject to reservations, restrictions and easements of record; applicable zoning regulations and ordinances; applicable federal, state and local environmental protection laws and regulations; real property taxes and assessments for the current tax period, if any; and any conditions or state of facts that a current survey of the Easement Area would show.

DB6280 1001

EXHIBIT D

CONTRACTOR/SUBCONTRACTOR INSURANCE REQUIREMENTS

INSURANCE REQUIREMENTS
NATIONAL RAILROAD PASSENGER CORPORATION (AMTRAK)
WASHINGTON TERMINAL COMPANY (WTC)

New Jersey Transit PI No. 184A- Elizabeth Station Improvements
Revised as of May 31, 2017

DEFINITIONS

In these Insurance Requirements, "Railroad" or "Amtrak" shall mean National Railroad Passenger Corporation and, as appropriate, its subsidiary, Washington Terminal Company ("WTC"). "Contractor" shall mean the party identified as "Permittee" in the Temporary Permit to Enter Upon Property Agreement or the party with whom Amtrak has contracted in another agreement (e.g., Preliminary Engineering Agreement, Design Phase Agreement, Construction Phase Agreement or Force Account Agreement), as well as its officers, employees, agents, servants, contractors, subcontractors, or any other person acting for or by permission of Contractor. "Operations" shall mean activities of or work performed by Contractor. "Agreement" shall mean the Temporary Permit to Enter Upon Property Agreement or other such agreement, as applicable.

INSURANCE

Contractor shall procure and maintain, at its sole cost and expense, the types of insurance specified below. Contractor shall evidence such coverage by submitting to Amtrak the original Railroad Protective Liability Policy and certificates of insurance evidencing the other required insurance, prior to commencement of Operations. In addition, Contractor agrees to provide certified copies of the insurance policies for the required insurance within 30 days of Amtrak's written request. All insurance shall be procured from insurers authorized to do business in the jurisdiction(s) where the Operations are to be performed. Contractor shall require all subcontractors to carry the insurance required herein or Contractor may, at its option, provide the coverage for any or all subcontractors, provided the evidence of insurance submitted by Contractor to Amtrak so stipulates. The insurance shall provide for thirty (30) days prior written notice to Amtrak in the event coverage is substantially changed, canceled or non-renewed. All insurance shall remain in force until all Operations are satisfactorily completed (unless otherwise noted below), all Contractor personnel and equipment have been removed from Railroad property, and any work has been formally accepted. Contractor may provide for the insurance coverages with such deductibles or retained amounts as Amtrak may approve from time to time, except, however, that Contractor shall, at its sole expense, pay for all claims and damages which fall within such deductible or retained amount on the same basis as if there were full commercial insurance in force in compliance with these requirements. Contractor's failure to comply with the insurance requirements set forth herein shall constitute a violation of the Agreement.

1. **Workers' Compensation Insurance** complying with the requirements of the statutes of the jurisdiction(s) in which the Operations will be performed, covering all employees of Contractor. Employer's Liability coverage with limits of not less than **One Million ($1,000,000) Dollars** each accident or illness shall be included.

   In the event the Operations are to be performed on, over, or adjacent to navigable waterways, a U.S. Longshoremen and Harbor Workers' Compensation Act Endorsement and Outer Continental Lands Act Endorsement are required.

2. **Commercial General Liability (CGL) Insurance** covering liability of Contractor with respect to all operations to be performed and all obligations assumed by Contractor under the terms of the Agreement. Products-completed operations, independent contractors and contractual liability coverages are to be included, with the contractual exclusion related to construction/demolition activity within fifty (50) feet of the railroad deleted and no exclusions for Explosion/Collapse/ Underground (X-C-U) applicable or added.

   The policy shall name National Railroad Passenger Corporation and, as appropriate, WTC, and all commuter agencies and railroads that operate over the property or tracks at issue as additional insureds with respect to the operations to be performed. In addition, the policy shall include an ISO endorsement Form CG 24 17 10 01 or its equivalent providing contractual liability coverage for railroads listed as additional insureds. Coverage for such additional insureds shall be primary and non-contributory with respect to any other insurance the additional insureds may carry.

   Coverage under this policy shall have limits of liability of not less than **Twenty-Five Million ($25,000,000) Dollars** each occurrence, combined single limit, for bodily injury (including disease or death), personal injury and property damage (including loss of use) liability. Such coverage may be provided by a combination of a primary CGL policy and a following form excess or umbrella liability policy.

3. **Automobile Liability Insurance** covering the liability of Contractor arising out of the use of any vehicles which bear, or are required to bear, license plates according to the laws of the jurisdiction in which they are to be operated, and which are not covered under Contractor's CGL insurance. The policy shall name National Railroad Passenger Corporation and, as appropriate, WTC, and all commuter agencies and railroads that operate over the property or tracks at issue as additional insureds with respect to the operations to be performed. Coverage under this policy shall have limits of liability of not less than **Two Million ($2,000,000) Dollars** each occurrence, combined single limit, for bodily injury (including disease or death), personal injury and property damage (including loss of use) liability.

   In the event Contractor or any subcontractor will be transporting and/or disposing of any hazardous material or waste off of the jobsite, a MCS-90 Endorsement is to be added to this policy and the limits of liability are to be increased to **Five Million ($5,000,000) Dollars** each occurrence.

4. **Railroad Protective Liability (RRP) Insurance** covering the Operations performed by Contractor or any subcontractor within fifty (50) feet vertically or horizontally of railroad tracks. The current ISO Occurrence Form (claims-made forms are unacceptable) in the name of National

Railroad Passenger Corporation (and as appropriate, WTC, and all commuter agencies and railroads that operate over the property or tracks at issue) shall have limits of liability of not less than **Five Million ($5,000,000) Dollars** each occurrence, combined single limit, for Coverages A and B, for losses arising out of injury to or death of all persons, and for physical loss or damage to or destruction of property, including the loss of use thereof. A **Ten Million ($10,000,000) Dollars** annual aggregate shall apply. Additionally, Policy Endorsement CG 28 31 - Pollution Exclusion Amendment, is required to be endorsed onto the policy. Further, "Physical Damage to Property" as defined in the policy is to be deleted and replaced by the following endorsement:

"It is agreed that 'Physical Damage to Property' means direct and accidental loss of or damage to all property owned by any named insured and all property in any named insured's care, custody and control."

The original RRP Liability Insurance Policy must be submitted to Amtrak prior to commencement of Operations.

5. **All Risk Property Insurance** covering damage to or loss of all remaining personal property of Contractor, its contractors and subcontractors used during Operations including, but not limited to, tools, equipment, construction trailers and their contents and temporary scaffolding at the project site, whether owned, leased, rented or borrowed for the full replacement cost value. Insurance policies of Contractor, its contractors and subcontractors, covering tools, equipment and other personal property will include a waiver of subrogation and any other rights of recovery in favor of Amtrak and Contractor.

6. **Contractor's Pollution Liability Insurance** covering the liability of Contractor arising out of any sudden and/or non-sudden pollution or impairment of the environment, including clean-up costs and defense, that arise from the Operations of Contractor, with National Railroad Passenger Corporation and, as appropriate, WTC, and all commuter agencies and railroads that operate over the property or tracks at issue named as additional insureds. Coverage under this policy shall have limits of liability of not less than **Two Million ($2,000,000) Dollars** each occurrence. The coverage shall be maintained during the term of the project, and for at least two (2) years following Amtrak's acceptance of the completion of all Operations to be performed.

7. **Pollution Legal Liability Insurance** is required if any hazardous material or waste is to be transported or disposed of off of the jobsite. Contractor, its subcontractor or transporter, as well as the disposal site operator, shall maintain this insurance. Contractor shall designate the disposal site, and must provide a certificate of insurance from the disposal facility to Amtrak. The policy shall name National Railroad Passenger Corporation and, as appropriate, WTC, and all commuter agencies and railroads that operate over the property or tracks at issue as additional insureds, with limits of liability of not less than **Two Million ($2,000,000) Dollars** per claim.

   Further, any additional insurance coverages, permits, licenses and other forms of documentation required by the United States Department of Transportation, the Environmental Protection Agency and/or related state and local laws, rules and regulations shall be obtained by Contractor.

8. **Professional Liability Insurance** covering the liability of Contractor for any and all errors or omissions committed by Contractor in the performance of the Operations, regardless of the type

of damages. The coverage shall be maintained during the term of the Operations, and for at least three (3) years following completion thereof. The policy shall have a retroactive date that precedes any design work on the project and shall have limits of liability of not less than **Two Million ($2,000,000) Dollars** per claim and **Two Million ($2,000,000) Dollars** in the annual aggregate.

If Contractor is not performing professional design or engineering services, Contractor may elect to satisfy this requirement through the addition of endorsement CG2279 "Incidental Professional Liability" to its CGL policy.

9. **Waiver of Subrogation** As to all insurance policies required herein, Contractor waives all rights of recovery, and its insurers must waive all rights of subrogation of damages against Amtrak, NJ TRANSIT and, as appropriate, WTC, and their agents, officers, directors, and employees. The waiver must be stated on the certificate of insurance.

10. **Punitive Damages** Unless prohibited by law, no liability insurance policies required above shall contain an exclusion for punitive or exemplary damages.

11. **Claims-Made Insurance** If any liability insurance specified above shall be provided on a claims-made basis then, in addition to coverage requirements above, such policy shall provide that:

    a. The retroactive date shall coincide with or precede Contractor's start of Operations (including subsequent policies purchased as renewals or replacements);

    b. The policy shall allow for the reporting of circumstances or incidents that might give rise to future claims;

    c. Contractor will use its best efforts to maintain similar insurance under the same terms and conditions that describe each type of policy listed above (e.g., CGL, Professional Liability) for at least three (3) years following completion of the Operations; and

    d. If insurance is terminated for any reason, Contractor will purchase an extended reporting provision of at least six (6) years to report claims arising from Operations.

12. **Evidence of Insurance** Contractor shall furnish evidence of insurance as specified above at least fifteen (15) days prior to commencing Operations. Prior to the cancellation, renewal, or expiration of any insurance policy specified above, Contractor shall furnish evidence of insurance replacing the cancelled or expired policies. THESE DOCUMENTS SHALL INCLUDE A DESCRIPTION OF THE PROJECT AND THE LOCATION ALONG THE RAILROAD RIGHT-OF-WAY (typically given by milepost designation) IN ORDER TO FACILITATE PROCESSING. The fifteen (15) day advance notice of coverage may be waived by Amtrak in situations where such waiver will benefit Amtrak, but under no circumstances will Contractor

begin Operations without providing satisfactory evidence of insurance as approved by Amtrak. Such evidence of insurance coverage shall be sent to:

Execution Copy

AFFIDAVIT OF CORPORATE AUTHORIZATION

COMMONWEALTH OF PENNSYLVANIA :
ss
COUNTY OF PHILADELPHIA :

Donald J. Stadtler says under oath:

1. Authorized Representative. I am the Executive Vice President, Chief Administration Officer of **NATIONAL RAILROAD PASSENGER CORPORATION**, a corporation organized under 49 U.S.C. §24101 *et seq.* and the laws of the District of Columbia, having its headquarters at 60 Massachusetts Avenue, N.E., Washington, D.C. 20002 ("Grantor").

2. Representations. The statements contained in this Affidavit are true to the best of my knowledge, information and belief.

3. Corporate Authority. Parcels E2H and E2I as depicted on Exhibit "A" attached hereto, in the City of Elizabeth, Union County, New Jersey are collectively called the "Property". Grantor is to convey to **NEW JERSEY TRANSIT CORPORATION**, a public transportation corporation organized under the laws of the State of New Jersey, with an address at One Penn Plaza E, 8th Floor, Newark, NJ 07105 (**"Grantee")** an easement over portions of the Property **(the "Easement").** This action is authorized pursuant to the Grantor's corporate governance documents. Grantor is qualified to transact business in New Jersey. The individual executing the Easement on behalf of Grantor is duly authorized to execute the Easement.

4. Approval by Shareholders. Shareholder approval is not required.

5. Reliance. Grantor makes this Affidavit in order to induce the Grantee to accept its Easement. It is aware that the Grantee will rely on the statements made in this Affidavit and on its truthfulness.

CONSOLIDATED RAIL CORPORATION

A corporation organized and existing under the laws of the Commonwealth of Pennsylvania, having an office at Six Penn Center Plaza, Philadelphia, Pennsylvania, 19103, hereinafter referred to as the Grantor

and

THE STATE OF NEW JERSEY

acting by and through
the Commuter Operating Agency of the
New Jersey Department of Transportation

having an office at Market Street and McCarter Highway, Newark, New Jersey, 07101, hereinafter referred to as the Grantee.

WHEREAS, pursuant to the Regional Rail Reorganization Act of

BK 3252 PG 206

COUNTY OF UNION
CONSIDERATION $6,5,934.00
REALTY TRANSFER FEE Exempt
DATE 4/6/81 EW

1973, as amended (the "Rail Act"), the Special United States District Court ("Special Court") ordered conveyance to the Grantor of certain New Jersey rail properties designated in the Final System Plan and certified to the Special Court by the United States Railway Association ("USRA"); and

WHEREAS, certain rail properties conveyed to Grantor were designated for possible acquisition by state and transportation authorities pursuant to Section 206(e)(1)(D) of the Rail Act; and

WHEREAS, specific New Jersey rail properties were designated for possible acquisition by the Grantee pursuant to a resolution of USRA Board of Directors dated March 3, 1976; and

WHEREAS, pursuant to Sections 206(e)(1)(D) and 206(d)(5)(C) of the Rail Act, state and transportation authorities were granted an option for 900 days to acquire the designated rail properties, which option expired on September 18, 1978; and

WHEREAS, pursuant to Public Law No. 95-611, 92 Stat. 3090 (1978), said option period was extended to March 31, 1979; and

WHEREAS, pursuant to Sections 206(e)(1)(D) and 206(d)(5)(C) of the Rail Act, on September 15, 1978 and March 31, 1979, the Grantee exercised its option to acquire certain New Jersey rail properties; and

WHEREAS, the Grantor and Grantee have executed a Memorandum of Understanding dated March 30, 1979, concerning these rail properties;

NOW, THEREFORE, the Grantor, for and in consideration of the

sum of the net liquidation value established by USRA for these rail properties plus additions and betterments, in the amount of SIX HUNDRED FIFTEEN THOUSAND NINE HUNDRED THIRTY FOUR DOLLARS ($615,934.00) lawful money of the United States of America, unto it well and truly paid by the said Grantee, at or before the sealing and delivery of this Deed, the receipt whereof is hereby acknowledged, does by these presents grant, convey, remise, release and forever quitclaim unto the said Grantee, its successors and assigns:

A. All of the Grantor's right, title and interest, legal and equitable, in and to the real property located in the as described in Exhibit A attached to this deed as a part hereof, together with all of the buildings and improvements thereon and together with all of the appurtenances, hereditaments, franchises, ways, waters, minerals, rights, privileges, improvements, fixtures, licenses, leaseholds, reversions, easements, rights under operating, trackage and joint facility agreements, rents, issues, profits and other interests and items belonging to or in any way appertaining to such real property, including but not limited to all real property items that would properly be recorded in Accounts 1 through 15 and 90 of the Property Accounts prescribed by the Interstate Commerce Commission for Rail Companies in its Uniform System of Accounts, 49 C.F.R. Part 1201, to the extent that such interests and items belong or in any way appertain to such real property, except as those interests and

items belong or appertain to the real property hereinafter reserved and excepted.

B. AND TOGETHER WITH the permanent easements and rights to use, operate, maintain, repair, renew and replace any and all existing railroad facilities necessary or useful in the operation of the lines of railroad and premises hereby conveyed which may be located on Grantor's abutting property, together with the easement of reasonable access over Grantor's property to permit the exercise of the foregoing easements and rights.

RESERVING AND EXCEPTING, HOWEVER, TO THE GRANTOR:

C. An Easement previously set forth in Exhibit 3 of the Memorandum of Understanding between the Grantor and Grantee dated March 30, 1979, as follows:

> An easement for the right and license to enter upon and utilize the existing tracks and related operating facilities on the real property conveyed to Grantee for the purpose of performing the Grantor's freight service.
>
> Grantee agrees that Grantor has retained trackage rights for freight operations over real property conveyed to the Grantee pursuant to Section 206(d)(5)(C) and 206(e)(1)(D) of the Regional Rail Reorganization Act of 1973, as amended, 45 U.S.C.A. Section 701 et seq. (the "Act"). These trackage rights are exclusive except to the extent that trackage rights have been provided to third parties pursuant to federal law including but not limited to rights reserved to third parties in the conveyance deeds for these properties which Grantor received from the United States Railway Association ("USRA") as certified by the Special Court pursuant to Section 303(b)(1) of the Act and rights provided to the National Railroad Passenger Corporation in the Off-Corridor Operating Agreement with Conrail executed on April 1, 1976 pursuant to Section 402(a) of the Railroad Passenger Service Act; provided, however, that the Grantee retains its right to use, or permit another party or parties to use, the real property for any purpose, provided that such utilization does not unreasonably interfere with Grantor's trackage

rights and, provided further, that the Grantee's retained right shall be of no force and effect to the extent that it shall have been determined by the USRA, a regulatory body, or a court, subject to a final judicial determination upon timely appeal from a challenge to any such determination, that the trackage rights retained by Grantor are exclusive.

Subject to the foregoing, Grantor's easement shall include the right:

(a) to operate freight trains (including mail and express trains), special trains, cars, locomotives and other on-track equipment;

(b) to occupy and use such portions of stations, buildings and other facilities now upon the real property occupied by Grantor as of the date of this Deed;

(c) to use in conjunction with Grantee the presently existing railroad system telephone cable communications equipment, and facilities now upon the real property (and replacements thereof) and subject to the availability of space in light of the needs of and written approval of Grantee, to construct, operate and maintain such additions to or substitutions for the presently railroad system telephone cable communication equipment and facilities which are reasonably necessary or legally required in connection with the provision of freight service;

(d) to install track connections, with written approval of Grantee, for rail lines and trackage connections now or hereafter owned, leased, controlled or operated by Grantor, contiguous or adjacent to the real property to secure its present or future freight customers or to connect with its rail properties;

(e) to use portions of the maintenance of equipment facilities now upon the real property for the provision of maintenance of equipment service for equipment used in provision of freight service (including mail and express) and special train service;

(f) to have reasonable access over the real property to permit the exercise of the foregoing Easement; and

(g) to assign, transfer or lease any of its right under the Grantor's Easement to third parties with the

consent of Grantee.

The exercise of this Easement and right shall be subject to the following terms, provisions, qualifications and limitations:

(i) the operation of passenger trains shall take preference over the operation of trains operated pursuant to the Grantor's Easement;

(ii) in the event that it shall have been determined, whether by agreement of Grantor and Grantee or by a final decision in an appropriate legal forum, that the Grantee's planned use of the real property unreasonably interferes with Grantor's Easement, the Grantee shall have the option at its sole cost of providing Grantor with a reasonable alternative means of exercising its Easement in which event Grantee's planned use shall be deemed not to interfere with Grantor's Easement;

(iii) the Grantor's exercise of its rights under this Easement shall not unreasonably interfere with the Grantee's use or planned use of the real property; provided, however, that in the event that it shall have been determined, whether by agreement of Grantor and Grantee or by a final decision in an appropriate legal forum, that the Grantor's planned use of the real property unreasonably interferes with Grantee's use or planned use of the real property, the Grantor shall have the option at its sole cost of providing Grantee with a reasonably alternative means of permitting Grantee's utilization or planned utilization of the real property in which event Grantor's planned use shall be deemed not to interfere with Grantee's use or planned use.

(iv) Grantor's rights under the Easement shall terminate as to any portion of the real property in the event that Grantor's contract or common carrier freight service is abandoned or is not utilized for Grantor's freight service for a period of four years.

TO HAVE AND TO HOLD the rail property and the easements and rights hereby conveyed to the Grantee, the successors and assigns

of the Grantee forever, free and clear of any liens or encumbrances insofar as said real property, easements and rights were conveyed to Grantor so free and clear by Grantor's immediate predecessors in title, BUT SUBJECT, HOWEVER, to (i) those easements and rights reserved by the Grantor in Paragraph C above, (ii) the easements and rights reserved and excepted from the conveyance of this real property to the Grantor by the Grantor's immediate predecessors in title; and (iii) all existing easements or agreements of record, public or private, with respect to the real property herein conveyed.

THE GRANTOR HEREBY COVENANTS that the Grantor will perform, execute, acknowledge and deliver any and all such further acts, deeds, assignments and other instruments as may be reasonably requested by the Grantee to convey, confirm, clarify, identify or more precisely described the real property and the easements and rights conveyed by this Deed and to effect the recordation of, or otherwise perfect, this Deed and all such other deeds, assignments and instruments under any applicable statute, ordinance, rule or regulation.

THE GRANTEE HEREBY COVENANTS that the Grantee will perform, execute, acknowledge and deliver any and all such further acts, deeds, assignments and other instruments as may be reasonably requested by the Grantor to confirm, clarify, identify or more precisely described the real property and the easements and rights reserved and excepted from this conveyance or intended so

to be in order to carry out the intent of this Deed and to effect the recordation of, or otherwise perfect, this Deed and all such other deeds, assignments and instruments under any applicable statute, ordinance, rule or regulation.

ALL OF THE COVENANTS of the Grantor and Grantee, respectively, shall be deemed to be real covenants and shall run with the land.

THE words "Grantor" and "Grantee" used herein shall be construed as if they read "Grantors" and "Grantees", respectively, whenever the sense of this instrument so requires and whether singular or plural, such words shall be deemed to include in all cases the successors and assigns of the respective parties.

IN WITNESS WHEREOF, the said Grantor has caused this deed to

be duly executed the day and year first herein written.

EXHIBIT A

To the Deed By and Between

CONSOLIDATED RAIL CORPORATION

and

THE STATE OF NEW JERSEY

The real property described in this Exhibit A was acquired by the State of New Jersey with Title thereto effective as of September 15, 1978.

Maps referred to in the description are on file in the office of New Jersey Transit Corporation, Market Street and McCarter Highway, P.O. Box 10009, Newark, NJ 07101

PERTH AMBOY & WOODBRIDGE BRANCH

Line Code 1423

Union (MP 0.0) to Perth Amboy (MP 5.9)

All that portion of the right-of-way of railroad of Consolidated Rail Corporation known as the Perth Amboy & Woodbridge Branch and identified as Line Code 1423 in the records of the United States Railway Association, situate in the County of Union and the County of Middlesex, State of New Jersey;

Union County

Beginning at the present lateral cut line, near a connection of the said Perth Amboy and Woodbridge Branch with the Northeast Corridor (Main Line; New York to Philadelphia) of National Railroad Passenger Corporation (Amtrak) said lateral cut line is identified as Line Code 1423-0.0 in the records of the United States Railway Association and described as follows:

"Beginning at the point of intersection of the southeastern line of New Brunswick Avenue and the western property line of said railroad; thence North 57° East, a distance of 355 feet, more or less, along with southeastern line of New Brunswick Avenue, to a point; thence southeastwardly 130 feet, more or less, at right angles to the centerline of said branch tracks to a point on the eastern property line of said railroad, on the westerly line of Inman Avenue, the point of ending."

Thence, extending in a general southerly and southeasterly direction to Station 20+10, at the Union County/Middlesex County line;

Being the same property conveyed to Consolidated Rail Corporation on April 1, 1976 by Deed from Fairfax Leary, as Trustee of the Property of The United New Jersey Railroad and Canal Company, Document No. UNJ-CRC-RP-10 (Union County, New Jersey);

Middlesex County;

Thence, continuing the said Perth Amboy & Woodbridge Branch from the Union County/Middlesex County line, in a general southerly and southeasterly direction passing through Woodbridge and Perth Amboy, to the Points of Ending, at Station 311+52 (approximately MP 5.9) on the East bound track and at Station 277+01 on the Westbound track;

Being the same property conveyed to Consolidated Rail Corporation on April 1, 1976 by Deed from Fairfax Leary, as Trustee of the Property of The United New Jersey Railroad and Canal Company, Document No. UNJ-CRC-RP-7 (Middlesex County, New Jersey) and recorded in the Office of Secretary of State on October 12, 1978;

sum of the net liquidation value established by USRA for these rail properties plus additions and betterments, in the amount of TWO MILLION TWENTY SIX THOUSAND TWO HUNDRED THIRTY-SEVEN DOLLARS ($2,026,237.00) lawful money of the United States of America, unto it well and truly paid by the said Grantee, at or before the sealing and delivery of this Deed, the receipt whereof is hereby acknowledged, does by these presents grant, convey, remise, release and forever quitclaim unto the said Grantee, its successors and assigns:

A. All of the Grantor's right, title and interest, legal and equitable, in and to the real property located in the as described in Exhibit A attached to this deed as a part hereof, together with all of the buildings and improvements thereon and together with all of the appurtenances, hereditaments, franchises, ways, waters, minerals, rights, privileges, improvements, fixtures, licenses, leaseholds, reversions, easements, rights under operating, trackage and joint facility agreements, rents, issues, profits and other interests and items belonging to or in any way appertaining to such real property, including but not limited to all real property items that would properly be recorded in Accounts 1 through 45 and 90 of the Property Accounts prescribed by the Interstate Commerce Commission for Rail Companies in its Uniform System of Accounts, 49 C.F.R. Part 1201, to the extent that such interests and items belong or in any way appertain to such real property, except as those interests and

BOOK 1438 PAGE 525 LIBER 3253 FOLIO 278

items belong or appertain to the real property hereinafter reserved and excepted.

B. AND TOGETHER WITH the permanent easements and rights to use, operate, maintain, repair, renew and replace any and all existing railroad facilities necessary or useful in the operation of the lines of railroad and premises hereby conveyed which may be located on Grantor's abutting property, together with the easement of reasonable access over Grantor's property to permit the exercise of the foregoing easements and rights.

RESERVING AND EXCEPTING, HOWEVER, TO THE GRANTOR:

C. An Easement previously set forth in Exhibit 3 of the Memorandum of Understanding between the Grantor and Grantee dated March 30, 1979, as follows:

> An easement for the right and license to enter upon and utilize the existing tracks and related operating facilities on the real property conveyed to Grantee for the purpose of performing the Grantor's freight service.
>
> Grantee agrees that Grantor has retained trackage rights for freight operations over real property conveyed to the Grantee pursuant to Section 206(d)(5)(C) and 206(e)(1)(D) of the Regional Rail Reorganization Act of 1973, as amended, 45 U.S.C.A. Section 701 et seq. (the "Act"). These trackage rights are exclusive except to the extent that trackage rights have been provided to third parties pursuant to federal law including but not limited to rights reserved to third parties in the conveyance deeds for these properties which Grantor received from the United States Railway Association ("USRA") as certified by the Special Court pursuant to Section 303(b)(1) of the Act and rights provided to the National Railroad Passenger Corporation in the Off-Corridor Operating Agreement with Conrail executed on April 1, 1976 pursuant to Section 402(a) of the Railroad Passenger Service Act; provided, however, that the Grantee retains its right to use, or permit another party or parties to use, the real property for any purpose, provided that such utilization does not unreasonably interfere with Grantor's trackage

BOOK 1438 PAGE 526 M 3253 PG 279

rights and, provided further, that the Grantee's retained right shall be of no force and effect to the extent that it shall have been determined by the USRA, a regulatory body, or a court, subject to a final judicial determination upon timely appeal from a challenge to any such determination, that the trackage rights retained by Grantor are exclusive.

Subject to the foregoing, Grantor's easement shall include the right:

(a) to operate freight trains (including mail and express trains), special trains, cars, locomotives and other on-track equipment;

(b) to occupy and use such portions of stations, buildings and other facilities now upon the real property occupied by Grantor as of the date of this Deed;

(c) to use in conjunction with Grantee the presently existing railroad system telephone cable communications equipment and facilities now upon the real property (and replacements thereof) and subject to the availability of space in light of the needs of and written approval of Grantee, to construct, operate and maintain such additions to or substitutions for the presently railroad system telephone cable communication equipment and facilities which are reasonably necessary or legally required in connection with the provision of freight service;

(d) to install track connections, with written approval of Grantee, for rail lines and trackage connections now or hereafter owned, leased, controlled or operated by Grantor, contiguous or adjacent to the real property to secure its present or future freight customers or to connect with its rail properties;

(e) to use portions of the maintenance of equipment facilities now upon the real property for the provision of maintenance of equipment servier for equipment used in provision of freight service (including mail and express) and special train service;

(f) to have reasonable access over the real property to permit the exercise of the foregoing Easement; and

(g) to assign, transfer or lease any of its right under the Grantor's Easement to third parties with the

consent of Grantee.

The exercise of this Easement and right shall be subject to the following terms, provisions, qualifications and limitations:

(i) the operation of passenger trains shall take preference over the operation of trains operated pursuant to the Grantor's Easement;

(ii) in the event that it shall have been determined, whether by agreement of Grantor and Grantee or by a final decision in an appropriate legal forum, that the Grantee's planned use of the real property unreasonably interferes with Grantor's Easement, the Grantee shall have the option at its sole cost of providing Grantor with a reasonable alternative means of exercising its Easement in which event Grantee's planned use shall be deemed not to interfere with Grantor's Easement;

(iii) the Grantor's exercise of its rights under this Easement shall not unreasonably interfere with the Grantee's use or planned use of the real property; provided, however, that in the event that it shall have been determined, whether by agreement of Grantor and Grantee or by a final decision in an appropriate legal forum, that the Grantor's planned use of the real property unreasonably interferes with Grantee's use or planned use of the real property, the Grantor shall have the option at its sole cost of providing Grantee with a reasonably alternative means of permitting Grantee's utilization or planned utilization of the real property in which event Grantor's planned use shall be deemed not to interfere with Grantee's use or planned use.

(iv) Grantor's rights under the Easement shall terminate as to any portion of the real property in the event that Grantor's contract or common carrier freight service is abandoned or is not utilized for Grantor's freight service for a period of four years.

TO HAVE AND TO HOLD the rail property and the easements and rights hereby conveyed to the Grantee, the successors and assigns

BOOK 1438 PAGE 528 M3253TC 281

of the Grantee forever, free and clear of any liens or encumbrances insofar as said rail property, easements and rights were conveyed to Grantor so free and clear by Grantor's immediate predecessors in title, BUT SUBJECT, HOWEVER, to (i) those easements and rights reserved by the Grantor in Paragraph C above, (ii) the easements and rights reserved and excepted from the conveyance of this real property to the Grantor by the Grantor's immediate predecessors in title; and (iii) all existing easements or agreements of record, public or private, with respect to the real property herein conveyed.

THE GRANTOR HEREBY COVENANTS that the Grantor will perform, execute, acknowledge and deliver any and all such further acts, deeds, assignments and other instruments as may be reasonably requested by the Grantee to convey, confirm, clarify, identify or more precisely described the real property and the easements and rights conveyed by this Deed and to effect the recordation of, or otherwise perfect, this Deed and all such other deeds, assignments and instruments under any applicable statute, ordinance, rule or regulation.

THE GRANTEE HEREBY COVENANTS that the Grantee will perform, execute, acknowledge and deliver any and all such further acts, deeds, assignments and other instruments as may be reasonably requested by the Grantor to confirm, clarify, identify or more precisely described the real property and the easements and rights reserved and excepted from this conveyance or intended so

to be in order to carry out the intent of this Deed and to effect the recordation of, or otherwise perfect, this Deed and all such other deeds, assignments and instruments under any applicable statute, ordinance, rule or regulation.

ALL OF THE COVENANTS of the Grantor and Grantee, respectively, shall be deemed to be real covenants and shall run with the land.

THE words "Grantor" and "Grantee" used herein shall be construed as if they read "Grantors" and "Grantees", respectively, whenever the sense of this instrument so requires and whether signular or plural, such words shall be deemed to include in all cases the successors and assigns of the respective parties.

IN WITNESS WHEREOF, the said Grantor has caused this deed to

be duly executed the day and year first herein written.

THIS DEED IS MADE BY AND BETWEEN

FAIRFAX LEARY,

AS TRUSTEE OF THE PROPERTY OF

THE UNITED NEW JERSEY RAILROAD AND CANAL COMPANY, DEBTOR

("Grantor"), whose address is 1404 Mt. Pleasant Road, Villanova, Pennsylvania 19085

AND

CONSOLIDATED RAIL CORPORATION,

a corporation organized and existing under the laws of the Commonwealth of Pennsylvania ("Grantee"), whose address is 1818 Market Street, Philadelphia, Pennsylvania 19103.

WHEREAS, the Debtor is a railroad in reorganization under Section 77 of the Federal Bankruptcy Act, 11 U.S.C. Sec. 205, and is a railroad in reorganization as that term is defined in the Regional Rail Reorganization Act of 1973 (Public Law 93-236, 87 Stat. 985), as amended ("Act"); and

WHEREAS, by orders of the United States District Court for the Eastern District of Pennsylvania entered in Docket No. 70-347-A the above-named individual was duly appointed and is now serving as Trustee of the property of the Debtor; and

WHEREAS, the United States Railway Association, pursuant to Section 209 (c) of the Act, has certified to the Special United States District Court established pursuant to Section 209 (b) of the Act ("Special Court"), that the rail properties of the Debtor hereinafter described (except those hereinafter reserved and excepted) are to be transferred by the Grantor to the Grantee; and

WHEREAS, pursuant to Section 303 (b) (1) of the Act, the Special Court has ordered the Grantor to convey to the Grantee all of the Grantor's right, title and interest in such rail properties, free and clear of any liens or encumbrances as provided in Section 303 (b) of the Act;

NOW, THEREFORE, pursuant to the Order of the Special Court, the Grantor hereby grants and conveys to the Grantee:

A. All of the Grantor's right, title and interest, legal and equitable, in and to the real property located in the

County of Union, State of New Jersey

as described in Exhibit A attached to this Deed as a part hereof, together with all of the appurtenances, hereditaments, franchises, ways, waters, minerals, rights, privileges, improvements, fixtures, licenses, leaseholds, reversions, easements, rights under operating, trackage and joint facility agreements, rents, issues, profits and other interests and items belonging to or in any way appertaining to such real property, including but not limited to all real property items that would properly be recorded in Accounts 1 through 45 and 90 of the Property Accounts prescribed by the Interstate Commerce Commission for Railroad Companies in its Uniform System of Accounts, 49 C.F.R. Part 1201, to the extent that such interests and items belong or in any way appertain to such real property, except as those interests and items belong or appertain to the real property hereinafter reserved and excepted.

B. 1. The easements and rights to use, operate, maintain, repair, renew, replace and remove on, under, over and across the real property hereinafter reserved and excepted ("Grantor's Burdened Property"), any and all lines, poles, pipes, appliances, equipment, structures, facilities and appurtenances (each an "Easement Item") existing on and used or useful as of the date of delivery of this Deed as a part of any railroad communication, signal or interlocker system or as a part of any electric, telephone, telegraph, water, gas, steam, sanitary sewer, storm sewer or other utility system, together with the easement of reasonable access over the Grantor's Burdened Property to permit the exercise of the foregoing easements and rights, and the easement for lateral support of the real property conveyed by this Deed.

2. The easements and rights for the specific uses, if any, (each an "Easement Item") particularly described in Exhibit B attached to this Deed as a part hereof and burdening certain real property hereinafter reserved and excepted.

3. The Grantee shall give the Grantor reasonable notice before entering on the Grantor's Burdened Property to exercise the easements and rights conveyed in this Paragraph B, and shall exercise such easements and rights (a) so as not to interfere unreasonably with the use and enjoyment of the Grantor's Burdened Property, (b) in compliance with generally applicable reasonable requirements established from time to time by the Grantor and (c) so as not to increase materially the burden on the Grantor's Burdened Property existing on the date of delivery of this Deed. The Grantee shall indemnify and save the Grantor harmless from any loss, damage or expense arising from the exercise of the foregoing easements and rights, without regard to negligence on the part of the Grantor or the Grantee. Upon request of and at the expense of the Grantor, the Grantee shall execute and deliver to the Grantor a deed or other instrument releasing the Grantee's rights in any part of the Grantor's Burdened Property that is not used or reasonably needed by the Grantee in the exercise of the easements and rights conveyed in this Paragraph B.

4. If the location of any Easement Item would interfere with any proposed use or sale of any part of the Grantor's Burdened Property, the Grantor may, at the Grantor's expense and after obtaining the Grantee's written consent, relocate the interfering Easement Item or cause the same to be relocated. Such consent will be granted unless (a) the Easement Item cannot be relocated as proposed by the Grantor without unreasonable interference to the Grantee's operations or without damage to the integrity of the system of which the Easement Item is a part or (b) the Grantee will not have reasonable access to the relocated Easement Item. If the Grantee has previously released its easements and rights in any real property as provided in Paragraph B. 3. and a relocated Easement Item falls, in whole or in part, within the area that has been so released, the Grantor and the Grantee shall exchange the following instruments promptly after the relocation is completed:

(a) The Grantor shall execute and deliver to the Grantee a supplementary deed of easement which conveys to the Grantee with respect to the relocated Easement Item the easements and rights described in this Paragraph B.

(b) The Grantee shall execute and deliver to the Grantor a deed or other instrument of release as provided in Paragraph B. 3.

5. The Grantor shall bear all expenses and the cost of all transfer and recording taxes, fees and charges in connection with all deeds and other instruments delivered pursuant to this Paragraph B.

FILED AND RECORDED

RESERVING AND EXCEPTING, HOWEVER, TO THE GRANTOR:

C. All the respective right, title and interest of the Grantor, legal and equitable, in and to the real property described in Exhibit B attached to this Deed as a part hereof, but subject, however, to (a) the limitation of access thereto across the real property conveyed by this Deed as hereinafter provided and (b) the easements and rights conveyed pursuant to Paragraph B above.

D. 1. The easements and rights to use, operate, maintain, repair, renew, replace and remove on, under, over and across the real property conveyed by this Deed ("Grantee's Burdened Property"), any and all lines, poles, pipes, appliances, equipment, structures, facilities and appurtenances (each an "Easement Item") existing on and used or useful as of the date of delivery of this Deed as a part of any railroad communication, signal or interlocker system or as a part of any electric, telephone, telegraph, water, gas, steam, sanitary sewer, storm sewer or other utility system, together with the easement of reasonable access over the Grantee's Burdened Property to permit the exercise of the foregoing easements and rights, and the easement for lateral support of the real property reserved and excepted from this conveyance.

2. The easements and rights for the specific uses, if any, (each an "Easement Item") particularly described in Exhibit B to this Deed and burdening certain real property conveyed by this Deed.

3. The Grantor shall give the Grantee reasonable notice before entering on the Grantee's Burdened Property to exercise the easements and rights reserved and excepted in this Paragraph D, and shall exercise such easements and rights (a) so as not to interfere unreasonably with the use and enjoyment of the Grantee's Burdened Property, (b) in compliance with generally applicable reasonable requirements established from time to time by the Grantee and (c) so as not to increase materially the burden on the Grantee's Burdened Property existing on the date of delivery of this Deed. The Grantor shall indemnify and save the Grantee harmless from any loss, damage or expense arising from the exercise of the foregoing easements and rights, without regard to negligence on the part of the Grantee or the Grantor. Upon request of and at the expense of the Grantee, the Grantor shall execute and deliver to the Grantee a deed or other instrument releasing the Grantor's rights in any part of the Grantee's Burdened Property that is not used or reasonably needed by the Grantor in the exercise of the easements and rights reserved and excepted in this Paragraph D.

4. If the location of any Easement Item would interfere with any proposed use or sale of any part of the Grantee's Burdened Property, the Grantee may, at the Grantee's expense and after obtaining the Grantor's written consent, relocate the interfering Easement Item or cause the same to be relocated. Such consent will be granted unless (a) the Easement Item cannot be relocated as proposed by the Grantee without unreasonable interference to the Grantor's operations or without damage to the integrity of the system of which the Easement Item is a part or (b) the Grantor will not have reasonable access to the relocated Easement Item. If the Grantor has previously released its easements and rights in any real property as provided in Paragraph D. 3. and a relocated Easement Item falls, in whole or in part, within the area that has been so released, the Grantor and the Grantee shall exchange the following instruments promptly after the relocation is completed:

(a) The Grantee shall execute and deliver to the Grantor a supplementary deed of easement which conveys to the Grantor with respect to the relocated Easement Item the easements and rights described in this Paragraph D.

(b) The Grantor shall execute and deliver to the Grantee a deed or other instrument of release as provided in Paragraph D. 3.

5. The Grantee shall bear all expenses and the cost of all transfer and recording taxes, fees and charges in connection with all deeds and other instruments delivered pursuant to this Paragraph D.

E. All mineral rights owned by the Grantor in any parcel as to which an interest in the surface is not conveyed by this Deed.

TO HAVE AND TO HOLD the real property and the easements and rights hereby conveyed to the Grantee, free and clear of (a) any liens or encumbrances as provided in Section 303 (b) of the Act and (b) any and all easements and rights of access to the real property reserved and excepted from this conveyance across the real property conveyed by this Deed (except as otherwise provided in this Deed), even if such easements and rights would otherwise arise by reason of necessity, implication or other operation of law, statute, ordinance, rule or regulation of any governmental entity, BUT SUBJECT, HOWEVER, to (i) those easements and rights reserved and excepted in Paragraph D above, (ii) all existing licenses, easements, leases (other than those which may have been created to secure payment of a financial obligation), and operating, trackage right and joint facility agreements and (iii) Operating Rights Grants, if any, from the Grantor to a third party conveyed concurrently with this conveyance and identified in Exhibit B to this Deed.

The Grantor hereby covenants that the Grantor will perform, execute, acknowledge and deliver any and all such further acts, deeds, assignments and other instruments as may be reasonably requested by the Grantee to convey, confirm, clarify, identify or more precisely describe the real property and the easements and rights conveyed by this Deed or intended so to be in order to carry out the intent of this Deed in light of the designations contained in the Final System Plan which has been certified to the Special Court by the United States Railway Association pursuant to the Act, and to effect the recordation of, or otherwise perfect, this Deed and all such other deeds, assignments and instruments under any applicable statute, ordinance, rule or regulation.

The Grantee hereby covenants that the Grantee will perform, execute, acknowledge and deliver any and all such further acts, deeds, assignments and other instruments as may be reasonably requested by the Grantor to confirm, clarify, identify or more precisely describe the real property and the easements and rights reserved and excepted from this conveyance or intended so to be in order to carry out the intent of this Deed in light of the designations contained in such Final System Plan, and to effect the recordation of, or otherwise perfect, this Deed and all such other deeds, assignments and instruments under any applicable statute, ordinance, rule or regulation.

By acceptance of this Deed, the Grantee (a) agrees to perform each of the obligations imposed on the Grantee by the terms of this Deed, and (b) assumes and agrees to perform and observe all obligations and conditions on the part of the Grantor or the Grantor's predecessor in title to be performed or observed that arise or accrue after the date of delivery of this Deed under all licenses, easements, leases (other than those which may have been created to secure payment of a financial obligation) and operating, trackage right and joint facility agreements (subject, however, to the terms thereof) which are conveyed by this Deed and under those to which this conveyance is made subject, provided that the Grantee assumes no obligation or liability that arises after the date of delivery of this Deed out of any event, act or failure to act that occurred prior thereto and, where an obligation or liability is related to a period which is both before and after such date, the Grantee assumes only that portion of the obligation or liability which is reasonably allocable to the part of the period after such date. Concurrently with the delivery of this Deed, the Grantee is delivering to the Grantor a separate instrument executed by the Grantee acknowledging receipt and acceptance of this Deed and affirming the provisions of this paragraph.

All of the covenants of the Grantor and the Grantee, respectively, shall be deemed to be real covenants and shall run with the land.

The words "Grantor" and "Grantee" used herein shall be construed as if they read "Grantors" and "Grantees", respectively, whenever the sense of this Deed so requires and, whether singular or plural, such words shall be deemed to include in all cases the successors and assigns of the respective parties.

This conveyance and the specific covenants of the Grantor are made by the Grantor as Trustee of the property of the Debtor, and not individually, and this conveyance is made without covenants of title or any warranties express or implied.

IN WITNESS WHEREOF, the Grantor has executed this Deed this 31st day of March, 1976.

UNJ-CRC-ATK-RP-5

Situate in the County of Union, State of New Jersey, and being part of The United New Jersey Railroad and Canal Company's line of railroad which is known as the Penn Central Perth Amboy and Woodbridge Branch, and is described in Exhibit A of this Deed, and being all of the real property in the County lying in, under, above, along, contiguous to and adjacent to that part of the line of railroad which lies beyond and initially southerly of the following described lateral cut line:

Beginning at the point of intersection of the southeastern line of New Brunswick Avenue and the western property line of said Railroad;

Thence, North 57°East, a distance of 355 feet, more or less, along the southeastern line of New Brunswick Avenue, to a point;

Thence, southeastwardly 130 feet, more or less, at right angles to the centerline of said branch tracks to a point on the eastern property line of said railroad, on the westerly line of Inman Avenue, the point of ending, as shown on Railroad Valuation Map No. V-2.2/12, as revised to December 31, 1967.

The part of the line of railroad described herein begins at the lateral cut line in Rahway, and extends to the County line near southeast of the junction with Penn Central's Main Line.

The lateral cut line is identified as Line Code 1423-0.0 in the records of the United States Railway Association.

DEED OF EASEMENT

THIS DEED AGREEMENT, made this 12th day of August, 1981, by and between the National Railroad Passenger Corporation with offices at 400 North Capitol Street, N.W., Washington, D.C. 20001, a District of Columbia corporation (hereinafter "Grantor") and the Elizabethtown Water Company, a public utility corporation of the State of New Jersey with offices at One Elizabethtown Plaza, Elizabeth, New Jersey 07207 (hereinafter "Grantee"),

WITNESSTH that, in consideration of the sum of Seven Thousand Five Hundred Dollars ($7,500.00) and the further sum of Five Hundred Dollars ($500.00) as a document preparation fee, and other good and valuable consideration, the receipt whereof is hereby acknowledged, the Grantor does hereby grant and confirm to the Grantee for the installation and maintenance of a forty-eight inch (48") sub-surface water main and for no other use or purpose whatsoever, a perpetual easement over all that certain parcel of land situate adjoining the Grantor's right-of-way in the City of Linden, County of Union and State of New Jersey more particularly described as follows:

BEGINNING in the southwesterly line of Wood Avenue, South at a point therein distant 137.55 feet measured northwesterly along the aforesaid southwesterly line of Wood Avenue, South from its intersection with the northwesterly line of Linden Avenue, West and from said beginning point running; thence (1) south 34 degrees 48 minutes 48 seconds west a distance of 247.03 feet to a point in the southeasterly line of land of Amtrak; thence (2) south 48 degrees 05 minutes west along the aforesaid southeasterly line of Amtrak a distance of 9.64 feet to a point in the northeasterly line of Penn Place said point being 80.0 feet measured northwesterly along the aforesaid northeasterly line of Penn Place from its intersection with the aforementioned northwesterly line of Linden Avenue, West; thence (3) north 41 degrees 55 minutes west along the aforesaid northwesterly line of Penn Place a distance of 18.274 feet to a point; thence (4) north 34 degrees 48 minutes 48 seconds east parallel with and 20.0 feet northwesterly measured at right angles to the first course of this description a distance of 254.17 feet to a point in the aforementioned southwesterly line of Wood Avenue, South; thence (5) South 49 degrees 38 minutes east along the aforesaid southwesterly line of Wood Avenue, South a distance of 20.09 feet to the point and place of beginning.

Containing 5,100 square feet or 0.1171 acres all as more particularly shown in yellow outline on the plan designated Exhibit "A" attached hereto and made a part hereof.

Reservations, Exceptions and Conditions:

1. That Grantor, its employees, agents, servants, contractors, invitees, licensees, and the like at any and all times shall have the right to move engines and railroad cars over and across Grantor's adjoining right-of-way, together with the right to maintain the said right-of-way as now constructed, or as may be hereafter constructed, with the further right at any and all

times to enter upon said premises for the purpose of operating, maintaining, repairing or replacing, relocating, removing and renewing said right-of-way or any improvements thereon; (1)

2. That Grantor shall not be liable to Grantee or its employees, servants, agents, contractors, licensees, invitees or the like for any loss, injury, damage or impairment which may occur to the person or property of any of them while on or about the said premises; (2)

3. That Grantee shall reimburse, compensate and pay Grantor the costs, damages, and losses of any kind whatsoever to Grantor's railroad right-of-way, its improvements and appurtenances, arising or resulting directly or indirectly from any use, construction, enjoyment or occupation under this easement, including, but not limited to, vehicle collisions, fires, transportation of flammable or explosive commodities or fluid drainage on or over said easement; (3)

4. That Grantee shall be responsible for, and will indemnify, save harmless and defend Grantor against and from any and all claims and suits for, and any and all liability, loss or expense arising from, or incidental to, or in connection with, damage to, or loss of any property of Grantor, Grantee, the agents, servants, licensees, contractors, invitees or employees of either, or any other person and indemnify against and from any and all claims and suits for, any and all liability, loss or expense arising out of, or incidental to or in connection with injury to or death of persons, including agents, servants, contractors, licensees, invitees or employees of Grantor or Grantee, or any other person, if said damage, loss, injury, or death shall arise in any manner, directly or indirectly, out of, or incidental to, or in connection with the granting of this easement or the use or occupation thereof, including any appurtenant walkways, curbs or gutters; (4)

5. That Grantee shall, at its sole cost and expense procure, provide, and deliver to the Railroad and thereafter maintain in effect for the duration of this easement, public liability insurance, as well as contractual liability insurance covering all liabilities assumed by the Grantee hereunder, without exception or restriction of any kind. Said insurance shall be in limits of not less than Two Million Dollars ($2,000,000.00) single limit, bodily injury, death and/or property damage whether of the Grantee, the Railroad, or others, and shall contain a waiver of subrogation against Railroad, and said insurance shall be with such companies and in such form as shall be acceptable to the Railroad. Said insurance shall be endorsed to provide that the Railroad will be notified in writing by the insurance carrier at least thirty (30) days in advance of any cancellation or changes which modify the coverage provided thereunder. The providing of such insurance shall not be deemed a limitation on the liability of Grantee as provided herein, but shall be additional security therefor. (5)

Grantee shall have the right to self insure, to fulfill its obligations under this Article, in lieu of procuring and maintaining the above mentioned insurance policies. (5.1)

6A. That Grantor shall not be liable or obligated to assume or pay any assessments, costs, charges or expenses in connection with the construction, re-construction, use, maintenance or renewal of said water main, appurtenances or facilities necessary thereto, affecting or benefitting in any way any land of said Grantor;

6B. That Grantor shall have the unlimited right to use the land hereinbefore described in any manner whatsoever, provided that such usage does not interfere in any way with the easement rights herein granted;

6C. That in the event said 48-inch water main and appurtenant facilities are hereafter assessed for any levy or taxes, the Grantee shall and will assume and pay all such levies or taxes on the said 48-inch water main and appurtenant facilities directly to the proper taxing authority imposing such taxes;

6D. That said Grantor shall have the right to make any direct connection to said 48-inch water main and appurtenant facilities in accordance with Grantee's normal and standard regulations, or have the right to have a smaller size water line installed to service Grantor's property, all at Grantee's sole cost and expense;

6E. That Grantee shall, upon final installation of said 48-inch water main, restore the surface of the aforementioned premises to their pre-existing condition including, but not limited to, proper grading and drainage as well as asphalt covering, all at the sole cost and expense of the Grantee, and within 30 days of commencing construction.

7. That Grantee, prior to any construction work, repairs or improvements to the premises, shall give thirty (30) days' prior written notice to, and shall submit plans and specifications to Railroad and obtain the written approval thereof by the Chief Engineer of Railroad before any work or alteration of the premises is performed; except that the thirty day notice to Grantor shall not be required for emergency repairs and minor repairs to the roadway surface; (7)

8. That Grantee, in the event this easement shall terminate for any reason, shall restore the land to its former condition upon the option of the Grantor, including, but not limited to, leveling and filling the earth, removing barricades and fences, and shoring up the railroad right-of-way if the right-of-way or any improvements thereon or appurtenances thereto have been weakened or damaged as a direct or indirect result of any use of said easement; (8)

9. That Grantee shall, at its sole cost and expense, make necessary repairs to the premises for its proper upkeep and maintenance and will keep

the area of the easement in constant good order, repair and safe condition, including, but not limited to open areas, landscaping, drainage, pavement, and sidewalks or walkways thereon; (9)

10. That Grantee shall at its sole cost and expense arrange for, and procure necessary electricity, water or other utility service required for Grantee's use; (10)

11. That Grantee shall not assign, transfer, sell or otherwise attempt to convey or encumber this easement, or any part of said premises, without the prior written consent of Grantor; (11)

12. That any failure, omission, neglect or dereliction by Grantee in complying with the Reservations, Exceptions and Conditions herein contained shall be sufficient justification for Grantor at Grantor's sole discretion and in accordance with any terms or conditions it may establish, to terminate and determine the easement granted hereunder; (12)

13. That the Reservations, Exceptions and Conditions hereunder shall run with the land and inure to the benefit of Grantor, its successors and assigns binding and obligating Grantee its successors and assigns, for as long as the premises shall be subject to this easement, provided, however, that if the premises described herein shall be utilized or occupied for any other purpose than incident to supplying the City of Newark with water then this easement shall immediately cease, terminate and expire; (13)

14. That any notice or communication required to be given hereunder shall be deemed sufficiently served or rendered to Grantee if, in writing, delivered or sent by registered or certified mail to Grantee addressed to Norbert Wagner - Chief Engineer, Elizabethtown Water Company, P. O. Box 111, Plainfield, New Jersey 07061 or such other address as Grantee shall designate by written notice; provided however, that any notice or communication required hereunder from Grantee to Grantor must be served by registered or certified mail addressed to the National Railroad Passenger Corporation, 400 North Capitol Street, N. W., Washington, D.C. 20001, attention: Real Estate Department, or at such address as Grantor may designate by written notice; (14)

15. That no termination or expiration of this agreement shall obligate Grantor to refund any portion of the consideration or compensation paid by Grantee for the granting of this easement; (15)

IN WITNESS WHEREOF, the parties hereto freely have set their hands and affixed their seals in execution hereof, as of the day and year first above written.

PERMIT TO ENTER UPON PROPERTY

File:

PERMISSION is hereby granted to Elizabethtown Water Company with offices at One Elizabethtown Plaza, Elizabeth, New Jersey hereinafter called "Permittee" to enter property of the National Railroad Passenger Corporation, hereinafter called "Railroad", for the purpose of water main construction in the City of Linden, in the County of Union and State of New Jersey under the following terms and conditions:

1. LOCATION AND ACCESS.

FIRST - Beginning in the southwesterly line of Wood Avenue, south at a point therein distant 158.04 feet measured northwesterly along the aforesaid southwesterly line of Wood Avenue, south from its intersection with the northwesterly line of Linden Avenue, west and from said beginning point running; thence (1) south 34 degrees 48 minutes 48 seconds west a distance of 254.17 feet to a point in the northeasterly line of Penn Place said point being 98.274 feet measured northwesterly along the aforesaid northeasterly line of Penn Place from its intersection with the aforementioned northwesterly line of Linden Avenue, West; thence (2) north 41 degrees 55 minutes west along the aforesaid northeasterly line of Penn Place a distance of 10.274 feet to a point; thence (3) north 34 degrees 48 minutes 48 seconds east parallel with and 10.0 feet northeasterly measured at right angles to the first course of this description a distance of 252.78 feet to a point in the aforementioned southwesterly line of Wood Avenue, south; thence (4) south 49 degrees 38 minutes east along the aforesaid southwesterly line of Wood Avenue, south a distance of 10.074 feet to the point and place of beginning.

Containing 2,535 square feet or 0.0582 acres, and

SECOND - BEGINNING in the southwesterly line of Wood Avenue, South at a point therein distant 100.0 feet measured northwesterly along the aforesaid southwesterly line of Wood Avenue, south from its intersection with the northwesterly line of Linden Avenue, west and from said beginning point running; thence (1) south 40 degrees 28 minutes 21 seconds west along the southeasterly line of land of Amtrak a distance of 156.55 feet to a point; thence (2) north 41 degrees 55 minutes west a distance of 1.64 feet to a point; thence (3) south 48 degrees 05 minutes west still along the lands of Amtrak a distance of 90.36 feet to a point; thence (4) north 34 degrees 48 minutes 48 seconds east a distance of 247.03 feet to a point in the aforementioned

southwesterly line of Wood Avenue, south; thence (5) south 49 degrees 38 minutes east along the aforesaid southwesterly line of Wood Avenue, South a distance of 37.95 feet to the point and place of beginning.

Containing 5,656 square feet or 0.1298 acres.

2. LIABILITY. Permittee shall indemnify, defend and save harmless the Railroad from and against any and all detriment, damages, losses, claims, demands, suits, costs or expenses which the Railroad may suffer or sustain or be subject to, directly or indirectly, caused either wholly or in part by reason of work performed on the Railroad's property by Permittee and/or its contractor.

3. CONSIDERATION. ~~Permittee will pay to the Railroad the sum of One Hundred Dollars ($100.00) as a compensation for the preparation of this permit, payable in advance upon execution of this permit.~~

4. STARTING OF USE OF PROPERTY. Permitee or its contractor shall notify the Chief Engineer of the Railroad, or his designee, at least seven (7) days in advance before entering upon or starting any work upon Railroad property. No entry or use of Railroad property will be permitted until this permit is signed, charges thereunder paid, and permission received from the Chief Engineer's designee who will be A. C. Erickson located at Suburban Station, Philadelphia. Telephone number 215-895-7505.

5. RAILROAD OPERATIONS. All operations shall be carried on in such a manner so as not to interfere with Railroad property and operation or the use of any Railroad Facilities. If, in the opinion of the Chief Engineer of the Railroad, or his designee, conditions warrant at any time, the Railroad will provide flag service and protection at the expense of the Permittee, and Permittee agrees to pay to the Railroad the full cost and expense therefor.

6. CROSSING TRACK. In no event shall Employees, equipment or material cross a track or tracks without special permission and with at least notice of forty eight (48) hours in advance, so that the Railroad may arrange for the necessary flag protection at the expense of the Permittee and Permittee agrees to pay to the Railroad the full cost and expense therefor. Such permission shall be obtained from the Chief Engineer of the Railroad or his designee.

7. CLEARANCES. All equipment working on or material in use upon the property of the Railroad shall be kept at all times not less than ten (10) feet from the nearest rail of any mainline track, or as subsequently modified in writing by the Chief Engineer or his designee. The Permittee and/or its contractor shall conduct its operations so that no part of its equipment shall foul an operated track, transmission, signal or communication lines, or any other structure of the Railroad.

29 03 122

8. RESTORATION OF PREMISES. Upon completion of the work, the Railroad's property shall be left in a condition satisfactory to the Railroad. This includes, without limitation, the restoration immediately of any fences removed.

9. TERM OF PERMIT. The Railroad reserves the right to revoke this permit at any time. Unless subsequently modified, this permit shall extend thirty (30) days from the date construction of said water main commences at which time it shall expire automatically. The Permittee agrees to notify the Railroad when use of the property or work is completed. Under no circumstances shall this temporary permit be construed as granting the Permittee any right, title or interest of any kind or character in, on or about the land or premises of the Railroad.

10. (a) INSURANCE. Before any work is started on Railroad property, Permittee or his contractor shall furnish the Chief Engineer of the Railroad, or his designee, with evidence of its Workmen's Compensation, Public Liability and Property Damage Coverages, as specified in Sections 1, 2, and 3 of the attached addendum entitled "MAINTENANCE AND PROTECTION OF RAILROAD TRAFFIC".

11. This permit shall be subject to the execution of a lease agreement between Permittee and the Railroad within 20 days of the date of execution hereof.

To confirm your acceptance of the above conditions, please return one signed copy of this permit to this office at National Railroad Passenger Corporation, Attn: Real Estate Department, 400 North Capitol Street, N.W., Washington, D.C. 20001. The second copy may be retained for your file.

INSURANCE REQUIREMENTS

In addition to any other forms of insurance or bonds required under the terms of the contract and specifications, the contractor will be required to carry insurance of the following kinds and amounts:

1. Contractor's Public Liability and Property Damage Liability Insurance

The contractor shall furnish evidence to the (State, City or as the case may be) that, with respect to the operations he performs, he carries regular contractor's public liability insurance providing for a limit of not less than two million ($2,000,000) dollars for all damages arising out of bodily injuries to or death of one person, and subject to that limit for each person, a total limit of two million ($2,000,000) dollars for all damages arising out of bodily injuries to or death of two or more persons in any one accident, and regular contractor's property damage liability insurance providing for a limit of not less than two million ($2,000,000) dollars for all damages arising out of an injury to or destruction of property in any one accident and, subject to that limit per accident, a total (or aggregate) limit to two million ($2,000,000) dollars for all damages arising out of injury to or destruction of property during the policy period.

If any part of the work is sublet, similar insurance shall be provided by or in behalf of the subcontractors to cover their operations.

2. Contractor's Protective Public Liability and Property Damage Liability Insurance

The contractor shall furnish evidence to the (State, City, or as the case may be) that, with respect to the operations performed for him by subcontractors, he carries in his own behalf regular contractor's protective public liability insurance providing for a limit of not less than two million ($2,000,000) dollars for all damages arising out of bodily injuries to or death of one person, and, subject to that limit for each person, a total limit of two million ($2,000,000) dollars for all damages arising out of bodily injuries to or death of two or more persons in any one accident, and regular contractor's protective property

damage liability insurance providing for a limit of not less than two million ($2,000,000) dollars for all damages arising out of injury to or destruction of property in any one accident and, subject to that limit per accident a total (or aggregate) limit of two million ($2,000,000) dollars for all damages arising out of injury to or destruction of property during the policy period.

3. Railroad Protective Liability and Property Damage Liability Insurance

In addition to the above, the contractor shall furnish evidence that, with respect to the operations he or any of his subcontractors perform, he has provided Railroad Public Liability Insurance (AAR-AASHTO Form) in the name of National Railroad Passenger Corporation and Consolidated Rail Corporation providing for a limit of not less than $2,000,000 single limit, bodily injury, for damages arising out of injuries to, or death of, all persons in any one occurrence and $2,000,000 single limit, property damage for damage to, or destruction of, property, including the loss of use thereof, in any one occurrence. No aggregate shall apply for either bodily injury or property damage.

The insurance hereinbefore specified shall be carried until all work required to be performed under the terms of the contract is satisfactorily completed as evidenced by the formal acceptance by the Chief Engineer of Amtrak. Failure to carry or keep such insurance in force until all work is satisfactorily completed shall constitute a violation of the contract.

The contractor shall furnish to the railroad company signed copy of the policy for contractor's public liability and property damage liability insurance, also signed copy of the policy for railroad protective public liability and property damage liability insurance prior to entry upon railroad right-of-way. If any work is subcontracted, the contractor shall furnish signed copy of the policy for contractor's protective public liability and property damage liability insurance.

All certificates shall be endorsed to provide 10 days notice to Amtrak by the insurance company before any change in or cancellation of the policies.

DEED OF ENCROACHMENT EASEMENT AND NON-EXCLUSIVE RIGHT OF WAY

Richard P. Hatfield
RECEIVED & RECORDED
UNION COUNTY, N.J.
JAN 11 11 45 AM '82
3276 772

This Deed of Easement is made by and between

The State of New Jersey
acting by and through the New Jersey Transit Corporation (Grantor), with an address at Market Street and McCarter Highway, Newark, New Jersey

AND

The Township of Cranford,
County of Union, State of New Jersey (Grantee),
with address at 8 Springfield Avenue, Cranford, New Jersey

Whereas, the Grantor is the owner in fee simple of certain railway property situate in the Township of Cranford, County of Union and State of New Jersey, said property formerly being owned by the Consolidated Rail Corporation and identified as the CNJ Main Line and the Line Code 0201 in the records of the United States Railway Association and recorded in the Union County Clerk's Office in Book 3253, pg. 276, a portion of which property is situated between rail station 815+90 and rail station 812+40; and

Whereas, the Grantee is the owner in fee simple of a parcel of land adjoining Grantor's above described property, said parcel more particularly described in the deed between Central Jersey Industries, Inc. and the Township of Cranford attached hereto (Exhibit A); and

Whereas, there exists on Grantee's said parcel of land a concrete block building, delineated on a map, dated June 4, 1979, prepared by Sailer and Sailer, Engineers-Land Surveyors, with an address at 215 Westfield Avenue, Elizabeth, New Jersey and annexed hereto as Exhibit B; and

Whereas, the Grantee is desirous of an encroachment easement consisting of the right and privilege to use, maintain, and repair the encroaching corner of said building; and

Whereas, the Grantor has agreed, in consideration of $500.00 paid by the Grantee, to grant to the Grantee an easement for the encroaching corner of said concrete block building together with a non-exclusive right to enter onto Grantor's property for the purpose and in the manner hereinafter expressed;

NOW this Deed witnesseth that in consideration of the sum of Five Hundred Dollars ($500.00), lawful money of the United States of America, unto it well and truly paid by the Grantee at or before the sealing and delivery of this Deed, the receipt of which is hereby acknowledged, the Grantor does by these presents grant unto the Grantee, its successors and assigns a perpetual encroachment easement on Grantor's property described above in order to use, maintain, repair and remove that corner of the above-mentioned concrete building which encroaches upon Grantor's said property, subject to the reservations and covenants hereinafter set forth, together with a non-exclusive right to enter upon Grantor's property adjoining said concrete block building for the sole purpose of maintaining, repairing or removing said building and for no other purpose; said easement

and right of way being on, over and across that certain plot, piece or parcel of land situated in the Township of Cranford, County of Union, State of New Jersey and described as follows:

BEGINNING at a point in the second course of the tract conveyed by Central Jersey Industries, Inc. to the Township of Cranford and described in Exhibit A, distant therein northeasterly 212.46 feet from the beginning of second course of said tract; thence (1) along said second course north 72 degrees 24 minutes 35 seconds east 59.64 feet to the beginning of third course of said tract; thence (2) along said third course north 57 degrees 42 minutes 34 seconds east 5.77 feet; thence (3) south 10 degrees 23 minutes east 9.62 feet; thence (4) south 79 degrees 37 minutes west 64.42 feet to the point and place of BEGINNING, said description being in accordance with a survey made by Sailer & Sailer, Engineers-Land Surveyors, dated June 4, 1979 and attached hereto as Exhibit B;

Reserving to the Grantor the right to cross said ensement and right of way with additional railroad tracks and to operate, maintain and modify its railroad within the limits of the easement and right of way.

TO HAVE AND TO HOLD such encroachment easement and right of way here by granted unto Grantee, its successors and assigns as appurtenant to the said land of Grantee so long as said concrete block building shall exists, and no longer; the easement and right of way shall terminate automatically upon the removal or destruction of said building. Should said building be removed or destroyed the easement and right of way herein granted shall revert to the Grantor.

The Grantee hereby covenants with the Grantor that

a. the Grantee, its successors and assigns, shall maintain the said concrete block building in reasonably good condition and repair until removal or destroyed;

b. the Grantee, its successors and assigns, shall pay any and all taxes and assessments imposed on said building, including those imposed upon that portion of said building which encroaches upon Grantor's property;

c. the Grantee shall bear all expenses and the cost of all transfer and recording taxes, fees and charges in connection with this deed;

d. the Grantee understands that the proximity of its premises, said concrete block building, and its property to the railroad tracks on Grantor's adjoining land involves some risk, and it is therefore agreed that the Grantee, its successors or assigns, as part of the consideration for the easement granted herein, shall assume as to said building and contents and as to property of any kind located along the right of way granted herein by the Grantee, its agents, servants, employees, all risk of loss, damage or destruction arising from the exercise of the foregoing easement and right of way; and the Grantee, its successors and assigns shall defend, indemnify, protect and save harmless the State of New Jersey, the New Jersey Transit Corporation, Consolidated Rail Corporation, the New Jersey Department of Transportation, their agents, servants and employees from and against any and all loss, damages, suits, claims, demands or expense arising from the exercise of the foregoing easement and right of way, without regard to negligence on the part of any of the aforesaid parties and entities;

e. the Grantee agrees that the Grantor shall have no liability for any loss, property or personal damages, or expenses resulting to the Grantee its successors, assigns or any agents, employees, officials, sevants, invitees or licensees arising out of the

exercise of the foregoing easement and right of way;

f. the Grantee shall carry comprehensive general liability insurance for personal and property damage which shall cover all claims arising out of the possession, use and maintenance of said building including that portion of the building which encroaches upon the Grantor's property. Said insurance shall be maintained in force by the Grantee, its successors or assigns until the termination of the easement herein granted. The foregoing insurance coverage is not intended to nor does it limit the liability of the Grantee to hold the State of New Jersey and New Jersey Transit Corporation harmless;

g. the Grantee shall exercise the easements and rights granted herein so as not to interfere unreasonably with the proper and safe use, operation and enjoyment of the Grantor's property. Grantee shall, at its own cost and expense, furnish any necessary precautions so that persons, equipment and materials are kept a safe distance away from the tracks of the Grantor's railroad;

h. the Grantee shall notify Grantor of any successors to or assigns of the right and authority herein granted by the Grantor.

All of the covenants of the Grantor and the Grantee shall be deemed to be real covenants and shall run with the land as long as the above building exists.

IN WITNESS WHEREOF, the said Grantor has caused this Agreement to be duly executed this 2 day of December, 1981.

EXHIBIT A

102—DEED - BARGAIN AND SALE
CORP. TO IND. OR CORP.

This Deed,

made the 8th day of April, 19 80 .

Between

CENTRAL JERSEY INDUSTRIES, INC.

a corporation existing under and by virtue of the laws of the State of New Jersey having its principal office at Gateway 1 - Room 501 of Newark in the City of Essex and State of New Jersey herein designated as the Grantor,

And

TOWNSHIP OF CRANFORD

residing or located at 8 Springfield Avenue of Cranford in the County of in the Township of Union and State of New Jersey hereinafter designated as the Grantee,

Witnesseth, that the Grantor, for and in consideration of TWO HUNDRED SIXTY NINE THOUSAND, FIVE HUNDRED DOLLARS ($269,500)*

lawful money of the United States of America, to it in hand well and truly paid by the Grantee, at or before the sealing and delivery of these presents, the receipt whereof is hereby acknowledged, and the Grantor being therewith fully satisfied, does by these presents grant, bargain, sell and convey unto the Grantee, forever,

All that tract or parcel of land and premises, situate, lying and being in the Township of Cranford in the County of Union and State of New Jersey, more particularly described as follows:

BEGINNING at a point in the southerly line of North Avenue East at the easterly line of land now or formerly of Charles L. Bell conveyed to him by Central Railroad Company of New Jersey by Deed Book 803 Page 559, said point being 380.00 feet westerly along said line of said North Avenue East 380 feet from the westerly line of land conveyed by Central Railroad Company of New Jersey to David O. Evans by Deed Book 2220 Page 235, and from said beginning point running thence (1) along the said line of Bell South 10 degrees 08 minutes 00 seconds East 190.00 feet; thence (2) north 72 degrees 24 minutes 35 seconds East 272.00 feet; thence (3) North 57 degrees 42 minutes 34 seconds East 86.70 feet to the westerly line of land now or formerly of Elberon Development Co., Inc.; thence (4) along the same North 10 degrees 08 minutes 00 seconds West 127.0 feet to the said southerly line of North Avenue East; thence (5) along the same south 79 degrees 52 minutes 00 seconds West 350.00 feet to the point and place of BEGINNING.

The Grantor herein is the Successor in Interest to title of The Central Railroad Company of New Jersey pursuant to Order No. 965 of the Federal District Court for the District of New Jersey, said Order having been filed on September 13, 1979.

*In addition, by acceptance of this Deed, Grantee agrees to assume any liabilities for taxes, interest and penalties thereon assessed against the subject premises and to hold Grantor harmless with respect to same.

BEING known as Block 319 Lot 10 on the tax maps of the Township of Cranford, New Jersey.

Order No. 965 of the Federal District Court for the District of New Jersey was recorded in the office of the Register of Union County, New Jersey in Book 3203 at Page 636.

Together with all and singular the buildings, improvements, ways, woods, waters, watercourses, rights, liberties, privileges, hereditaments and appurtenances to the same belonging or in anywise appertaining; and the reversion and reversions, remainder and remainders, rents, issues and profits thereof, and of every part and parcel thereof; **And also** all the estate, right, title, interest, use, possession, property, claim and demand whatsoever, of the Grantor both in law and in equity, of, in and to the premises herein described, and every part and parcel thereof, with the appurtenances. **To Have and to Hold** all and singular, the premises herein described, together with the appurtenances, unto the Grantee and to Grantees' proper use and benefit forever.

In all references herein to any parties, persons, entities or corporations, the use of any particular gender or the plural or singular number is intended to include the appropriate gender or number as the text of the within instrument may require.

Wherever in this instrument any party shall be designated or referred to by name or general reference, such designation is intended to and shall have the same effect as if the words "heirs, executors, administrators, personal or legal representatives, successors and assigns" had been inserted after each and every such designation.

In Witness Whereof, *the Grantor has caused these presents to be signed and attested by its proper corporate officers and its corporate seal to be hereto affixed the day and year first above written.*

*Use symbol "C" to indicate that fee is exclusively for county use.

(1) PARTY OR LEGAL REPRESENTATIVE (See Instructions #3, 4 and 5 on reverse side)

Deponent, EDWARD J. TOY (Name), being duly sworn according to law upon his/her oath deposes and says that he/she is the Attorney for the Township of Cranford, the Grantee (Name whether Grantor, Grantee, Legal Representative, Corporate Officer, Sheriff or Fee Ex. Executing Instrument, etc.)

in a deed dated December 2, 1981 transferring real property identified as Block No. a portion of 319

Lot No. 10 located at North Avenue East, Cranford, Union County, New Jersey. (Print Address - Municipality, County) and annexed hereto.

(2) CONSIDERATION (See Instruction #6)

Deponent states that, with respect to deed hereto annexed, the actual amount of money and the monetary value of any other thing of value constituting the entire compensation paid or to be paid for the transfer of title to the lands, tenements or other realty, including the remaining amount of any prior mortgage to which the transfer is subject or which is to be assumed and agreed to be paid by the grantee and any other lien or encumbrance thereon not paid, satisfied or removed in connection with the transfer of title is $500.00.

(3) FULL EXEMPTION FROM FEE Deponent claims that this deed transaction is fully exempt from the Realty Transfer Fee imposed by c.49, P.L. 1968, for the following reason(s). Explain in detail (See Instruction #7.) Mere reference to exemption symbol is not sufficient.

(b) Deed is to the Township of Cranford.

(4) PARTIAL EXEMPTION FROM FEE *NOTE: All boxes below apply to grantor(s) only. ALL BOXES IN APPROPRIATE CATEGORY MUST BE CHECKED. Failure to do so will void claim for partial exemption. (See Instruction #8)*

Deponent claims that this deed transaction is exempt from the increased portion of the Realty Transfer Fee imposed by c. 176, P.L. 1975 for the following reason(s):

a) SENIOR CITIZEN (See Instruction #9)
- ☐ Grantor(s) 62 yrs. of age or over.*
- ☐ One or two-family residential premises.
- ☐ Owned and occupied by grantor(s) at time of sale.
- ☐ No joint owners other than spouse or other qualified exempt owners.

b) BLIND (See Instruction #8)
- ☐ Grantor(s) legally blind.*
- ☐ One or two-family residential premises.
- ☐ Owned and occupied by grantor(s) at time of sale.
- ☐ No joint owners other than spouse or other qualified exempt owners.

c) DISABLED (See Instruction #8)
- ☐ Grantor(s) permanently and totally disabled.*
- ☐ One or two-family residential premises.
- ☐ Receiving disability payments.
- ☐ Owned and occupied by grantor(s) at time of sale.
- ☐ Not gainfully employed.
- ☐ No joint owners other than spouse or other qualified exempt owners.

*IN THE CASE OF HUSBAND AND WIFE, ONLY ONE GRANTOR NEED QUALIFY.

d) NEW CONSTRUCTION (See Instruction #8)
- ☐ Entirely new improvement.
- ☐ Not previously used for any purpose.
- ☐ Not previously occupied.

Deponent makes affidavit to induce the County Clerk or Register of Deeds to record the deed and accept the fee submitted herewith in accordance with the provisions of c. 49, P.L. 1968.

Subscribed and Sworn to before me

GRANT OF EASEMENT

THIS EASEMENT AGREEMENT, made this 10th day of October, 1995, between CONSOLIDATED RAIL CORPORATION, a Pennsylvania Corporation, with its principal office at Two Commerce Square, 2001 Market Street, Philadelphia, PA., 19101 ("Grantor"), and BUCKEYE PIPE LINE COMPANY, L.P., a Delaware Limited Partnership, with its principal offices at 3900 Hamilton Boulevard, Allentown, PA., 18103 ("Grantee").

WHEREAS, Grantor, or one or more of its predecessors, entered into separate license agreements, set forth in Appendix A, attached hereto and made a part hereof, with Grantee or its predecessors to permit the construction, installation, maintenance, and use of certain crossings and occupations described in said Appendix over, across, along, or under the land and tracks of Grantor at various locations in the County of Union, State of New Jersey ("Agreement" or "Agreements"); and

WHEREAS, the Agreements generally provide for annual payments; and

WHEREAS, the parties hereto desire to replace the Agreements with one permanent and irrevocable easement document and to establish the terms and conditions under which this Grant of Easement may be extended to cover the installation of new or additional facilities upon the property of Grantor by Grantee;

NOW, THEREFORE, Grantor, for and in consideration of Thirty One Thousand Eight Hundred Sixty Five and 05/100 Dollars ($31,865.05), the receipt of which is hereby acknowledged, and in further consideration of Grantee keeping and performing the covenants and conditions hereinafter stated on the part of Grantee to be kept and performed, does hereby grant unto Grantee, to the extent the title of Grantor so permits, an easement in its property for the purposes stated in the second paragraph on this page, namely, the right to maintain, repair, renew, replace, use and remove the facilities, which easement shall encumber only the physical space and dimensions actually required for the current physical facilities now existing pursuant to the Agreements. Such facilities in their present form or as modified pursuant to any provision of this Easement Agreement, together with any appurtenances thereto are hereinafter referred to singularly as the "FACILITY" and collectively as the "FACILITIES".

TOGETHER WITH the right of ingress and egress to and over said property, and any adjoining land of Grantor, insofar as necessary for the construction, maintenance, repair, alteration, renewal, use and removal of the FACILITIES, which activities shall be conditioned on proper notification to Chief Engineer Construction of Grantor or his designee, hereinafter referred to as "Chief Engineer."

1.1 The location and construction plans referred to in the Agreements shall continue to apply to the FACILITIES, and no change shall be made therein, including (but not limited to)

Prepared by _____ of Consolidated Rail Corporation, Philadelphia, PA

changes in location, nature, size, number, or use of any FACILITY without the prior written consent of the Chief Engineer, which consent shall not be unreasonably withheld.

1.2 The work of construction, maintenance, repair, alteration, modification, renewal, relocation, replacement, and removal of the FACILITIES (all hereinafter referred to as "Work") shall be done by, and at the sole cost and expense of, Grantee in a manner satisfactory to, and approved by, the Chief Engineer, which approval shall not be unreasonably withheld, and shall not interfere with the proper and safe use and operation of the property or operations of Grantor; provided, however, that if any governmental entity having jurisdiction over the FACILITIES has determined or prescribed the manner and means of accomplishing the Work, or any portion thereof, then such requirements shall prevail, to the extent they are more restrictive than Grantor's, and Grantee agrees to comply therewith at all times at its sole cost and expense. The foregoing is not intended to modify or limit the provisions of Section 5, hereof.

1.3 Grantee, at its sole cost and expense, when performing any work in connection with the FACILITIES, shall furnish watchmen to keep persons, equipment and materials a safe distance from the tracks and operations of Grantor.

1.4 In addition to, but not in limitation of, any of the foregoing provisions, if at any time Grantor should deem flagmen or inspectors necessary to protect its operations, property, employees, patrons, or licensees during the course of the Work, Grantor shall have the right to provide and deploy such flagmen or inspectors, and Grantee agrees to bear the full cost (as specified in Section 7 of this Easement Agreement), risk and expense thereof and to promptly reimburse Grantor therefore upon demand. The furnishing or failure to furnish flagmen or inspectors by Grantor shall not release Grantee from any liabilities assumed by Grantee hereunder.

2. It is understood and agreed by the parties hereto, that from time to time hereafter the terms and conditions of this Easement Agreement may be extended to cover the installation and operation thereafter of additional facilities to be installed along, upon, over, under and across the property of Grantor, by Grantee, or if Grantee desires subject to the provisions of Section 1.1, or is required as herein provided, to revise, replace, remove, add to, or engage in new construction, expansion, or changes in the existing FACILITIES (including without limitation any changes in the nature of the product carried by, through, in, or upon the FACILITIES), it shall submit detailed plans, in accordance with current issues of Grantor's specification numbers CE-4 and/or CE-8 and if no longer produced by Grantor, then pursuant to such specifications as may be in effect, and obtain the approval of the Chief Engineer before any Work is commenced, which approval shall not be unreasonably withheld, the terms and conditions of this Easement Agreement shall apply thereto; and Grantor, (i) reserves the right to assess additional charges which Grantee agrees to pay, except Grantee may change the nature of the hydrocarbon, hydrocarbon derivatives or chemical or fuel-related products carried by, through, in, or upon the existing transverse crossing FACILITIES at no additional consideration, except Grantor's standard preparation fee as specified in Grantor's CE-3 Rental Schedule and if it is no longer produced by Grantor, then pursuant to such schedule as may be in effect, and (ii) if applicable, Grantor will provide Grantee with two (2) copies of an "Addendum to Grant of Easement" similar to Appendix "B" attached hereto and made a part hereof. Grantor and Grantee by mutual agreement may change the form of said Addendum as situations warrant.

3.1 Grantee shall be responsible, on its own initiative, for maintaining, repairing and renewing the FACILITIES and in addition, shall, upon notice from Grantor, promptly make such repairs and renewals thereto as may be required by Grantor. In the event of an emergency, Grantee shall take immediate steps to perform any necessary repairs, in which case, Grantee shall provide notification to Grantor of all work performed promptly after its completion, and in the event Grantee fails to immediately take steps to perform the necessary emergency repairs, Grantor shall have the right, but not the obligation, to perform or have such repairs performed at the sole cost and expense of Grantee. It is not the intent of either party hereto to circumvent (and both parties shall seek not to circumvent) the terms of any labor contract between the parties hereto and their respective labor organizations or unions.

3.2 "Emergency", as used herein, shall mean a condition causing an actual interruption to, or interference with, (i) the operation of Grantor's rail transportation business, or (ii) the operation of Grantee's FACILITIES for their intended purposes; also, any condition that (iii) caused or is causing any of loss or injury to any property of Grantor or Grantee and their employees or of any other individual or entity, or (iv) if not immediately corrected, could imminently cause such interruption, interference, loss or injury.

4.1 Grantor shall have the right to inspect the FACILITIES at any time, and to approve the materials used in the Work.

4.2 The right of inspection of the FACILITIES by Grantor shall extend for an appropriate distance on each side of the property of Grantor, inasmuch as the method of performing the Work or the material used therein with respect to the portion of the FACILITIES adjoining the property of Grantor may have a significant impact upon the strength and stability of the portion of the FACILITIES over, under, upon, or in the property of the Grantor.

5. Grantee shall comply with all statutes, rules, regulations, orders, directives, ordinances and similar promulgations of law applicable to the FACILITIES, and shall assume all cost, expense and responsibility in connection therewith, without any liability therefor on the part of the Grantor. Grantee shall indemnify, defend (at Grantor's option) and hold Grantor harmless from and against all costs, fines, penalties and expenses arising from the failure of Grantee to so comply.

6.1 Grantee understands that the railroad operations at or near the FACILITIES involve risk, and Grantee, as part of the consideration for this Grant, and with full knowledge and appreciation of such risk, hereby releases and waives any right to ask for or demand damages of any type, including direct or consequential damages, for or on account of any loss or injury to any property of Grantee and its employees, including property in the care, custody and control of Grantee, and to the FACILITIES and contents thereof that are over, under, upon, or in the property of Grantor, including loss of, or interference with, service or use thereof, except when proved by Grantee to be due directly to the sole negligence of Grantor.

6.2 Grantee shall indemnify, save harmless and defend (at Grantor's option) Grantor from and against all cost and expense arising from, or in connection with, any and all losses, damages, detriments, suits, claims, demands, costs and charges which Grantor may directly or

indirectly suffer, sustain, or be subjected to by reason of the construction, placement, attachment, presence, use, maintenance, repair, alteration, renewal, relocation, replacement, or removal of the FACILITIES, in, on, about, under, over, or from the property of Grantor, whether such loss and damage be suffered or sustained by Grantor or by its patrons, or licensees, or other persons or entities, including Grantee, its patrons and licensees and whether attributable to the act, omission or neglect of Grantor or any other person or entity, except when proved by Grantee to be due directly to the sole negligence of Grantor.

6.3 Notwithstanding anything contained in Section 6.2, and irrespective of any negligence of Grantor, Grantee assumes sole responsibility for, shall indemnify, save harmless, and defend (at Grantor's option) Grantor from and against all claims, actions, or legal proceedings arising, in whole or in part, from (i) the failure of Grantee to comply with any obligations imposed on it by this Easement Agreement, or (ii) any claims, actions, or legal proceedings under the Federal Employer's Liability Act ("FELA") and any amendments to FELA now or hereafter in effect, alleging or claiming, in legal effect, that Grantor in respect to that portion of its land which lies under or near the FACILITIES, failed to correct or guard against an unsafe condition or failed to furnish a safe place to work. Failure by Grantor to make verbal or written complaints to Grantee with respect to: unsafe working conditions, or Grantee's failure to carry out its obligations under this Easement Agreement; or knowledge on the part of Grantor of such unsafe working conditions, or Grantee's failure to carry out its obligations under this Easement Agreement, shall not be deemed to constitute acquiescence therein or waiver of by Grantor or actionable negligence on the part of Grantor.

6.4 If a claim or action is made or brought against either party and for which the other party may be responsible hereunder in whole or in part, such other party shall be notified and permitted to participate in the handling or defense of such matter.

7. Except as provided in Section 9.1 and 9.2 of this Easement Agreement, all cost and expense in connection with or resulting from the Work (as hereinabove defined) shall be borne by Grantee. In the event of Work being performed or material furnished by Grantor under the stipulated right to perform such Work under any section hereof, Grantee agrees to pay to Grantor (a) the actual cost of material plus the current applicable overhead percentages for storage, handling, transportation, purchasing and other related material management expenses, and (b) the actual cost of labor plus the current applicable overhead percentages as developed and published by the Accounting Department of Grantor for fringe benefits, payroll taxes, administration, supervision, use of tools, machinery and other equipment, supplies, employer's liability insurance, public liability insurance, and other insurance, taxes and all other indirect expenses, including but not limited to, automobile mileage charges then in effect as published by the United States Government. It is understood that such material and labor overhead charges shall be applied at the rates which are effective at the time of the performance of any such work by employees of Grantor. Grantee agrees to pay such bills within thirty (30) days of the presentation thereof by Grantor.

8. In the event Grantee elects to discontinue use of any of the FACILITIES, ("Abandoned Facilities"). Grantee shall, in a manner satisfactory to Grantor, (i) remove the Abandoned Facilities from Grantor's property or abandon them in place, with the approval of the

Chief Engineer, (ii) restore the property, and (iii) deliver to Grantor a release of this Easement Agreement with respect to the Abandoned Facilities in recordable form. If Grantee fails or refuses to remove the Abandoned Facilities within one hundred eighty (180) days after requested to do so by Grantor, Grantor shall (a) have the right, but not the obligation, to remove the Abandoned Facilities at the sole cost and expense of Grantee, and (b) not be liable to Grantee for such removal.

9.1 Grantee shall, at its sole cost and expense (except as otherwise specified below) and commencing within thirty (30) days following receipt of notice from Grantor, take such action as Grantor may specify to strengthen, support, relocate, or otherwise protect or modify any of the FACILITIES and thereafter promptly complete such work. Such requested action shall hereinafter be referred to as a "Modification". If necessary, Grantor shall provide so much of its adjoining land to Grantee as may be available for such Modification without additional compensation from Grantee. The obligation of Grantee to pay for such Modification shall be conditioned upon such Modification being necessary to permit and accommodate changes of grade or alignment and improvement in or additions to the operating facilities of Grantor for the conduct of its railroad business. If such Modification is being required of Grantor by a governmental entity, irrespective of whether such necessity or requirement is temporary or permanent, such Modification shall be done at no expense to Grantor. All Work in connection with any Modification shall comply with and be subject to the terms and conditions of this Easement Agreement.

9.2 With respect to requested Modification(s) for the cost and expense of which Grantee is responsible, Grantor agrees that Grantee shall be given an opportunity to seek and propose alternative courses of action, that, subject to Grantor's approval, would eliminate the necessity of relocating FACILITIES of Grantee. Such alternatives include, but are not limited to the acquisition of additional land at Grantee's sole cost and expense, which could accommodate the relocation or improvement of Grantor's railroad operating facilities for the cost of which Grantee would be fully responsible.

10.1 In the event the FACILITIES consist of electrical power or communication wires and appurtenances, Grantee shall promptly, upon verification that their FACILITIES are causing inductive interference, remedy such inductive interference growing out of, or resulting from the presence, condition or use of, the FACILITIES; and if Grantee fails to do so immediately, then Grantor may do so, and Grantee agrees to pay to Grantor on demand the full cost and expense thereof.

10.2 In the event the FACILITIES consist of an underground occupation, Grantee shall be responsible for any settlement caused to the land, tracks, facilities, and appurtenances of Grantor arising or resulting during the twelve month period subsequent to the completion of all Work. Grantee agrees, in addition to its covenants set forth in Section 6.2 hereof, to pay to Grantor on demand the full cost and expense of correcting such settlement.

11. As further consideration for this Easement Agreement, Grantee shall indemnify, Grantor for, and defend (at Grantor's option) and hold Grantor harmless from and against any liens, assessments, taxes, or charges of any kind made against Grantor or any of its property by

reason of the presence, construction, maintenance, or use of any of the FACILITIES, and Grantee shall pay Grantor, promptly upon bills rendered therefor, the full amount of any such liens, assessments, taxes, or charges rendered against Grantor or any of its property, including penalties, interest, late fees, and the costs to remove or bond any lien, assessment, tax, or charge from official records.

12. The rights herein granted to Grantee are subject to the right of Grantor to make use of its property, or any part thereof and facilities for rail transportation and related purposes and for all other purposes unimpaired by Grantee's FACILITIES and Work associated therewith. Grantor reserves the right to use such property, or any part thereof, for rail transportation and related purposes and for all other purposes which are not inconsistent, and which do not interfere, with, or impair, the rights granted by this Easement Agreement.

13.1 If the Grantee's right to exercise the rights herein granted shall be challenged through legal process by any third party on the grounds that the Grantor did not have sufficient interest to grant such rights, the Grantor consents and agrees, insofar as it may lawfully do so, to the acquisition by the Grantee of the disputed rights by (or in lieu of) the power of eminent domain, but in the event of the exercise of such power by Grantee, such rights shall be subject to and exercised in accordance with the terms and provisions of this Easement Agreement.

13.2 In the event Grantee is unable to acquire such rights by (or in lieu of) eminent domain, as a result of a successful legal challenge, then Grantor shall refund to Grantee, and Grantee hereby agrees to accept, as liquidated damages, that portion of the consideration paid under this Easement Agreement by Grantee that is allocable by proration to the portion or portions of land under this Grant which Grantee is unable to acquire. Grantee hereby irrevocably waives any and all rights it may have to claim any other damages it may suffer by reason of a third party's challenge as set forth in Section 13.1 hereof.

14. The words "Grantor", "Grantee", "party" and "parties" used herein shall include the subsidiaries, affiliates, directors, officers, agents and employees of Grantor and Grantee.

15. The terms and conditions of this Easement Agreement shall inure to the benefit of and be binding upon the parties hereto and their respective successors and assigns.

16. Grantee shall not commence any Work unless and until the mechanics of construction and all matters related thereto shall have received the approval of the Chief Engineer, which approval shall not be unreasonably withheld.

17. Grantee hereby agrees to pay all costs and fees in conjunction with the filing or recording of this instrument in or with any public place or with any public agency or subdivision and shall provide Grantor a copy of the recorded Easement Agreement.

18. The failure or delay on the part of either party to enforce or exercise at any time any of the provisions, rights or remedies in this Easement Agreement shall in no way be construed to be waiver thereof, nor in any way to affect the validity of this Easement Agreement or any part hereof, or the right of the party to thereafter enforce each and every such provision, right or

remedy. No waiver of any breach or violation of this Easement Agreement shall be held to be a waiver of any other subsequent breach or violation.

19. Every notice, approval, consent, demand or other communication required or permitted under this Easement Agreement shall be deemed sufficiently given by one party when received by the other party after being sent postage prepaid by overnight courier or United States certified or registered mail, addressed as follows:

To Grantor:

Consolidated Rail Corporation
Two Commerce Square
2001 Market Street
P. O. Box 41411 - 11C
Philadelphia, PA 19101-1411
Attention: Chief Engineer Construction

To Grantee:

Buckeye Pipe Line Company
P. O. Box 368
Emmaus, PA 18049-0368
Attention: Manager, ROW & Permits

20. This Easement Agreement shall be construed, governed and enforced in accordance with the laws of the State of New Jersey

21. Any and all obligations, liabilities or covenants which arose, may have arisen or were incurred by either party prior to the execution of this Easement Agreement shall survive to the same extent as if they arose under this Easement Agreement.

IN WITNESS WHEREOF, the parties hereto, intending to be legally bound, have caused this Grant to be fully executed the day and year first above written.

SECURITY INTEREST AGREEMENT

This Security Interest Agreement (hereinafter "Agreement"), made on December 12, 2001, is between New Jersey Transit Corporation acting for itself and through its subsidiary New Jersey Transit Rail Operations, Inc. (hereinafter collectively "NJ Transit"), a public instrumentality of the State of New Jersey, with principal offices at One Penn Plaza East, Newark, New Jersey, and the National Railroad Passenger Corporation (hereinafter "Amtrak"), a corporation organized under the Rail Passenger Service Act and the laws of the District of Columbia, with principal offices at Union Station, Washington, DC, hereby referred to collectively as the "Parties."

WHEREAS, Amtrak is the owner of the Northeast Corridor which includes rail property and railroad infrastructure in the States of Pennsylvania, New Jersey and New York, including points between Trenton, New Jersey and Pennsylvania Station, New York City and continuing through to Sunnyside Yard in Queens, New York City; and

WHEREAS, Amtrak is the operator of intercity passenger rail service on the Northeast Corridor pursuant to applicable federal law; and

WHEREAS, Amtrak maintains railroad infrastructure on the Northeast Corridor to enable train equipment and service to operate on the Northeast Corridor; and

WHEREAS, NJ Transit, pursuant to the New Jersey Public Transportation Act of 1979, as amended, and other applicable State and Federal law is authorized to operate commuter rail passenger service carrying passengers in New Jersey and between points in New Jersey and points in other states; and

WHEREAS, the Parties cooperatively provide passenger rail service in the State of New Jersey to and from New York City, New York; and

WHEREAS, the Parties have executed effective December 12, 2001 an Amendatory Agreement to the Parties' "Northeast Corridor Joint Benefit Capital Program Agreement Between New Jersey Transit Corporation and the National Railroad Passenger Corporation" this agreement hereinafter referred to as the "JBA"; and

WHEREAS, pursuant to the Parties' agreement in the JBA, over the period from October 1, 2001 through September 30, 2006, both Amtrak and NJ Transit will jointly contribute on a 50-50 basis a total of three hundred fifty million dollars ($350,000,000) for capital improvement projects to the Northeast Corridor; and

WHEREAS, the capital improvements to the Northeast Corridor that are funded by the Parties under the JBA will be owned by Amtrak and be subject to this Security Interest Agreement; and

MB9788-0951

WHEREAS, in return for its financial investment under the JBA, NJ Transit shall receive under this Agreement the rights to the beneficial use of the JBA capital assets and improvements during a twenty-five year period in which such assets are in use; and

WHEREAS, NJ Transit desires to obtain a security interest in those Northeast Corridor assets that are purchased or improved with NJ Transit funds under the JBA, and Amtrak is willing to grant and convey such a security interest; and

WHEREAS, the Parties hereby desire to consummate and fulfill their respective obligations to enter into a security interest agreement as per the Parties' understanding and intentions in the JBA;

NOW THEREFORE, in consideration of the mutual covenants and conditions herein stated below and in consideration of the mutual covenants and conditions stated in the JBA which is hereby incorporated by reference, and intending to be legally bound thereby, the Parties hereby enter into this Agreement as per the following terms and conditions:

1. Definitions:

(A) **Controlling Event:** The term "Controlling Event" shall mean the dissolution of Amtrak pursuant to Federal law or pursuant to bankruptcy law or the reorganization of Amtrak and where as a result of such dissolution or reorganization, Amtrak, directly or indirectly, no longer owns or no longer controls or operates, the NEC and the JBA Capital Assets, as defined in this Agreement. However, in the event of such a dissolution or reorganization of Amtrak, if a successor entity to Amtrak is legally bound by the terms of this Agreement and the JBA, the dissolution or reorganization of Amtrak shall not be considered a "Controlling Event".

(B) **JBA Capital Assets:** The term "JBA Capital Assets" shall mean the collateral of this Agreement. The "JBA Capital Assets" shall be in the value and amount of $175,000,000 or up to $175,000,000 if NJ Transit's investment under the JBA is in an amount less than $175,000,000. These JBA Capital Assets shall mean any and all NEC property, in the form of personal property, fixtures and/or real property, which is purchased, acquired, created and/or improved with the funds provided by NJ Transit under the JBA subsequent to September 30, 2001 for capital projects as set forth under the JBA. Such "JBA Capital Assets" shall be for various railroad properties or systems and may include such NEC items as machinery, computers, electronic equipment, railroad tracks and ties, railroad equipment, bridges, tunnels, railroad signaling equipment, railroad power equipment, catenary, catenary related equipment, railroad safety equipment, railroad repair equipment, stations, station improvements, structures, fixtures, facilities and any other type of personal or real property necessary for the operation of railroad service on the NEC. The "JBA Capital Assets" are intended by the Parties to improve and enhance the value and operational efficiency of the NEC so that such improvements inure to the benefit of the Parties' railroad operations.

(C) **NEC:** For purposes of this Agreement, the term "NEC" shall mean the Northeast Corridor railroad property owned, operated and maintained by Amtrak commencing at Trenton, New Jersey (including Morris interlocking) and extending through to New York City's

HB9788-1952

Pennsylvania Station and through the East River Tunnels to, and including, Sunnyside Yard in Queens, New York City.

(D) **Security Interest:** The term "Security Interest" shall mean that interest granted by Amtrak to NJ Transit so that NJ Transit shall have all of the rights of a secured party under the Uniform Commercial Code and applicable law. The "Security Interest" shall be subject to and subordinate to the interests of the Federal Government, if any, and of any pre-existing interests of third parties, if any.

2. **Grant of Security Interest by Amtrak to NJ Transit:**

(A) In consideration of the actual payments made by NJ Transit under the JBA for the JBA Capital Assets during the term of the JBA from September 30, 2001 through September 30, 2006, Amtrak hereby grants and conveys to NJ Transit a Security Interest in the JBA Capital Assets. The Parties agree, on an annual basis throughout the term of the JBA, to identify in writing those specific JBA Capital Assets to which the Security Interest will attach as actual Capital Program expenditures against program line items identified on Exhibit 2 of the JBA.

(B) The granted and conveyed Security Interest shall exist, extend and will be valid for a period of twenty-five years from the date each JBA Capital Asset described in Exhibit 2 of the JBA, is placed in service.

(C) For the duration of NJ Transit's Security Interest, Amtrak hereby agrees and covenants that it will not, without the written consent of NJ Transit, sell, assign or otherwise transfer the JBA Capital Assets unless such transfer is for the purpose of satisfying a pre-existing interest, if any, or unless Amtrak obtains a replacement item whose value is equal or greater than that of the JBA Capital Assets item which is transferred.

(D) Upon the occurrence of the Controlling Event, NJ Transit, subject to the pre-existing interests of the Federal Government, if any, or subject to the pre-existing interests of third parties, if any, shall have the right to sell assume or otherwise dispose of that portion of the JBA Capital Assets equal to the value of the, JBA Capital Assets, less depreciation which shall be calculated on a straight-line basis over the twenty-five period of the assets as specified in this Security Interest. In lieu of such sale or disposal, Amtrak (or its successor entity) may, at its option, compensate NJ Transit in an amount equal to the depreciated value of the JBA Capital Assets. Unless and until the occurrence of the Controlling Event, Amtrak shall be entitled to all of the benefits and rights pertaining to the JBA Capital Assets.

3. **Grant by Amtrak to NJ Transit of Beneficial Right to Use the JBA Capital Assets**

(A) In consideration of the payments made by NJ Transit under the JBA for the JBA Capital Assets, Amtrak hereby grants and conveys to NJ Transit the right to enjoy and benefit from the use of the JBA Capital Assets during the twenty-five year life of the JBA Capital Assets, subject to the terms and conditions of the Northeast Corridor Service Agreement between the Parties.

MB9788-0953

4. Amtrak Covenants and Declarations

(A) Amtrak states and declares that this Security Interest Agreement is a valid, legally binding and enforceable agreement of Amtrak.

(B) Amtrak states and declares that this Agreement has been duly authorized by all necessary corporate action on the part of Amtrak and that the execution, delivery and performance of this Agreement will not violate any provision of Amtrak's governing instruments, charter or by laws. Amtrak further states and declares that this Agreement will not violate any provision of the Mortgage dated December 9, 1976 between Amtrak and the United States of America.

5. NJ Transit Covenants and Declarations

(A) NJ Transit states and declares that this Agreement is a valid, legally binding and enforceable agreement of NJ Transit.

(B) NJ Transit states and declares that this Agreement has been duly authorized by all necessary agency action on the part of NJ Transit and that the execution, acceptance and performance of this Agreement will not violate any provision of NJ Transit's governing instruments, governing laws, by laws.

(C) NJ Transit shall not unreasonably oppose any effort by Amtrak to obtain financing secured in whole or in part with any JBA Capital Assets provided that such action will not diminish the value of the Security Interest.

6. Release of Grant of Security Interest

(A) At such time as each JBA Capital Asset item reaches the end of the twenty-five year periods each such item shall be released from this Agreement by NJ Transit. This Agreement shall terminate when all JBA Capital Assets have reached the end of the twenty-five year periods.

7. Successors and Assigns; Recordation

(A) This Agreement and the rights and obligations conferred and imposed hereunder shall be binding on and inure to the benefits of the successors, assigns and transferees of the Parties.

(B) The Parties to this Agreement hereby agree that this Agreement may be recorded by NJ Transit as NJ Transit may deem necessary in the appropriate land records offices in the appropriate offices in Washington, D.C., the States of Pennsylvania, New Jersey and New York. Amtrak shall provide all reasonable assistance to NJ Transit to ensure that this Agreement is accepted for recordation. Costs of recordation shall be borne by NJ Transit.

MB9788-0954

8. **Severability of Provisions**

(A) If any provision of this Agreement or the application of any such provision to any person or circumstance shall be held invalid or unenforceable, the remainder hereof, and the application of such provision to any person or circumstance other than those to which it is held invalid or unenforceable, shall not be invalidated or affected thereby.

9. **Notices**

All notices and other communications hereunder must be in writing. Any notice, request, demand, claim or other communication hereunder shall be deemed duly given it is sent by registered or certified mail, return receipt requested, postage prepaid, and addressed to the intended recipient as set forth below and the United States Postal Service confirms delivery thereof.

EASEMENT AGREEMENT

This **EASEMENT AGREEMENT** ("Agreement"), is made this 6 day of ~~July~~ August, 2018, by and between **NATIONAL RAILROAD PASSENGER CORPORATION**, a corporation organized under 49 U.S.C. §24101 *et seq.* and the laws of the District of Columbia, having its headquarters at 60 Massachusetts Avenue, N.E., Washington, D.C. 20002, ("**Amtrak**" or "**Grantor**") and **NEW JERSEY TRANSIT CORPORATION**, an instrumentality of the State of New Jersey, with an address at One Penn Plaza E, Newark, NJ 07105 ("**Grantee**" or "**NJ TRANSIT**"). Amtrak and Grantee are each referred to individually as a "Party" and collectively as the "Parties."

WITNESSETH:

WHEREAS, Amtrak, a corporation organized under the Rail Passenger Service Act and the laws of the District of Columbia, owns the Northeast Corridor ("NEC") rail line from Washington DC to New York City, NY; and

WHEREAS, NJ TRANSIT is an instrumentality of the State of New Jersey and is authorized to operate rail passenger service in New Jersey and between points in New Jersey and points in other states pursuant to the New Jersey Public Transportation Act of 1979, as amended; and

WHEREAS, NJ TRANSIT operates commuter trains over portions of the NEC; and

WHEREAS, NJ TRANSIT and Amtrak entered into the NEC Services Agreement originally dated May 1, 1985, which has been extended and modified several times to its current term, effective October 1, 2015, which describe the terms and conditions for the provision of and compensation for NJ TRANSIT's operations on the NEC; and

WHEREAS, pursuant to the 900 Day Option Settlement Agreement between the Parties dated December 13, 1982, and by deeds of conveyance dated July 1, 1982 ("900 Day Settlement"), NJ TRANSIT acquired and Amtrak reserved certain NEC facilities and property interests on the NEC; and

DB6280 0976

WHEREAS, in the 900 Day Option Settlement, Amtrak reserved certain railroad property along M.P. 14.5 in the City of Elizabeth, County of Union, State of New Jersey ("Amtrak Property"); and

WHEREAS, in the 900 Day Option Settlement, NJ TRANSIT acquired Parcels 2A, 2B, 2C1, 2D1, 2E1 and 2F1, known as the Elizabeth Station ("NJ TRANSIT Property"); and

WHEREAS, in the 900 Day Option Settlement, NJ TRANSIT also acquired perpetual easements in real property for rail purposes in Parcels E2C2, E2D2, E2E2, E2F2 and E2G, which include the platforms along Elizabeth Station ("Grantee's Easement Property"); and

WHEREAS, on or about 1987, NJ TRANSIT constructed high level platforms, walkways, elevators and stairways on portions of Grantor's property adjacent to Grantee's Easement Property, known as parcels E2H and E2I ("Grantor Property"); and

WHEREAS, Grantee has operated commuter rail service and maintained railroad structures on the NJ TRANSIT Property, Grantee's Easement Property, as well as the structures on Grantor Property; and

WHEREAS, the Parties wish to memorialize the legal relationship of the existing improvements on Grantor Property; and

WHEREAS, Grantee is building a new station building, elevators and stairs in the NJ TRANSIT Property, as well as rehabilitating the existing platforms and stairs on Grantor Property and building additional high level platforms and two ramps on Grantor Property; and

WHEREAS, the Parties executed a Project Initiation Form #184 agreement dated October 10, 2013 ("PI 184") authorizing Amtrak services for the preliminary design of Grantee Improvements, as further defined therein; and

WHEREAS, PI 184 was amended on or about October 24, 2016; and

WHEREAS, the Parties executed Project Initiation Form #184A dated January 19, 2018 ("PI 184A") approving Amtrak services for final design and construction of the Grantee Improvements; and

WHEREAS, Grantee has also requested Amtrak to grant Grantee a perpetual easement over Grantor Property, as more fully described in Exhibits A-1 and A-2, for the limited use purposes as set forth in Section 1 of this Agreement; and

WHEREAS, Amtrak is willing to grant the easement to Grantee pursuant to the terms and conditions of this Agreement; and

NOW THEREFORE, in consideration of the mutual covenants of the Parties hereto and

for other good and valuable consideration, the receipt and sufficiency of which is hereby acknowledged, the Parties agree as follows:

1. GRANT OF EASEMENT; USE

1.1. Grant. Subject to the terms and conditions of this Agreement, Amtrak, insofar as it has the power, title and authority so to do, hereby grants to Grantee an exclusive (except as set forth herein), perpetual easement, solely for the uses and purposes set forth below (the "Easement"), on the area (located on the Grantor Property) designated as the "Easement Area" as described on Exhibit A-1 (and depicted on Exhibit A-2), consisting of approximately 0.383 acres +/- for the north side platform and 0.497 acres +/- for the south side platform, for a total easement area of approximately 0.88 acres +/- all as more fully set forth in Exhibits A-1 and A-2 (collectively, the " Easement Area").

Notwithstanding anything else set forth herein, the Parties hereby acknowledge that during the course of the negotiations of this Agreement the definitions of Grantor Property and Easement Area were modified such that they each now describe the same real property. In order to expedite the execution of this Agreement, the Parties agreed that rather than redrafting the entire agreement, the Parties would acknowledge the negotiated change in this subsection.

1.2 Acceptance. Grantee has inspected and accepts the Easement Area in its present condition, AS IS, WHERE IS. To the best of Grantee's knowledge and belief, no statements, guarantees, representations or warranties, either express or implied, with regard to condition, fitness for use, zoning, or as to any matter or thing affecting or related to the Easement Area have been made by Grantor that are not specifically expressed herein, and Grantee is not relying on any statements, guarantees, representations or warranties, either express or implied, not specifically set forth herein. Grantee hereby waives, releases and discharges any claim Grantee may have against Amtrak with respect to the condition of the Easement Area, any defect therein, either patent or latent, the ability or inability to use the Easement Area as contemplated by this Agreement, or any other state of facts which exists with respect to the Easement Area.

1.3 Use. Subject to the terms and conditions of this Agreement, the Easement Area may be used by Grantee in perpetuity for passenger rail purposes, including but not limited to, all right, title and interest that the Grantor may have in and to the following improvements: the platforms, lighting facilities, signs and appurtenances constructed thereon.

2. AMTRAK'S FACILITIES

2.1 Reservation. Amtrak hereby reserves and retains unto itself and its successors and assigns forever the right to install, construct, use, operate, repair, inspect, maintain, renew, reconstruct or relocate any existing or future real or personal property located within, on, below or

above the Easement Area, including but not limited to fixtures; railroad tracks; supports; piers; footings; columns, appliances; equipment; utilities; pipe; conduit or tunnel; and any electric, communication, data, fiber optic or signal transmission lines; together with poles and guys therefor; any water, gas, steam, sanitary sewer, storm sewer or other utility system or lines(any and all of which shall be referred to individually as a "Fixture" and collectively as "Fixtures") as may now exist or may hereafter be placed upon, under or over the Easement Area by Amtrak or its designees. The Easement Area and the Easement are subject and subordinate to any and all such rights and uses, together with the right of Amtrak to enter in, on, above or under the Easement Area for access to permit the exercise of the foregoing rights. Grantee's rights hereunder also are subject to the reservations, requirements and restrictions set forth in Exhibit C of this Agreement. Notwithstanding such reservation, no new Fixtures (other than comparable replacements of existing Fixtures) will be installed that would negatively impact Grantee's operations within the Easement Area. NJ TRANSIT will receive all revenues from advertising located on platforms and ancillary structures attached thereto (such as stairwells and elevators) on the Easement Area. All other advertising operations and revenue is reserved to the Grantor.

2.2 Relocation or Removal of Fixtures. The Parties will coordinate the relocation of existing utilities in the Easement Area as requested by NJ TRANSIT. If Grantee requests the relocation or removal of any Fixture, Amtrak may approve or deny such request in its sole discretion including any conditions if Amtrak elects approval.

2.3 Subordination. The Easement and Easement Area are and shall be subject and subordinate to all existing and future agreements (to which Amtrak is a party) for on-ground, above-ground and below ground telecommunication, fiber optic, pipe and wire, on, under or over the Easement Area, whether such agreements are recorded or not, and Amtrak shall have a permanent right for access to, and installation, operation, use, maintenance, repair, renewal, relocation, inspection, removal and replacement of such commercial fixtures and any technological evolution of such commercial fixtures and the right to retain all consideration therefrom. Notwithstanding the foregoing, any new agreements may not unreasonably interfere with Grantee's operations on the Easement Area.

2.4 Amtrak's Operations. Amtrak reserves and shall retain the right for itself and, its employees, agents, servants, contractors, invitees, licensees, and assigns at all times to park, store and move engines, rolling stock and other equipment on adjacent Amtrak railroad right-of-way, together with the right to maintain the adjacent Amtrak right-of-way as now constructed, or as may be hereafter constructed, with the further right at all times to enter upon the Easement Area for the purpose of operating, maintaining, constructing, installing, repairing, replacing, relocating, removing and renewing the adjacent Amtrak railroad right-of-way or any of Amtrak's improvements thereon.

2.5 Grantee's Operations. Amtrak will exercise its rights and reservations under this Agreement so as not to unreasonably interfere with Grantee's operations on the Easement Area.

3. EASEMENT FEE; COSTS AND EXPENSES

3.1 Easement Fee. Upon execution of this Agreement by Grantee, Grantee shall pay Amtrak Four Hundred Seventy Nine Thousand ($479,000.00) Dollars as fair market value as established by an appraisal as provided by NJ TRANSIT (the "Easement Fee"). The Easement Fee shall be deemed earned in full when paid and shall not be refundable for any reason.

3.2 Costs. In addition to the Easement Fee, Grantee shall pay promptly when due all costs, fees, interest, charges, expenses, reimbursements, and obligations of every kind and nature whatsoever relating to this Agreement and the Easement.

3.3 Recordation Taxes and Fees. Grantee shall be responsible for all transfer and recordation tax, recording fees, and any and all other costs and expenses associated with the granting or recordation of this Agreement.

3.4 Real Estate and Use Taxes. Grantee shall pay any tax or assessment (or any payments imposed in lieu thereof) levied, assessed, or imposed upon Amtrak, the Amtrak Property, the Easement Area, or the Grantee Improvements (as such term is defined in Article 5 of this Agreement) based on or arising out of the ownership, value, use, occupation or operation of the Easement Area or the Grantee Improvements. Amtrak is exempt from state and local taxes pursuant to 49 U.S.C. §24301(l). The obligation to make any payments pursuant to this Article will survive the termination of this Agreement.

4. GRANTEE'S EASEMENT AREA MAINTENANCE AND OBLIGATIONS

4.1 No Interference with Amtrak. Grantee shall use the Easement Area in a careful, safe and orderly manner so as not to interfere in any way with the maintenance or operation of the business of Amtrak or of its licensees or with any Fixtures used in the business of Amtrak or of its licensees. Except in emergency circumstances, when no advance notice is necessary, Amtrak shall provide NJ TRANSIT with thirty days' advance notice of any work performed by Amtrak or its licensees on the Easement Area or that may impact Grantee's operations in the Easement Area.

4.2 Permits and Licenses. Grantee, at its sole cost and expense, shall obtain all applicable permits and licenses for its use of the Easement Area.

4.3 Maintenance and Repair. Grantee, at Grantee's sole cost and expense, shall keep the Easement Area and all aspects of all improvements placed thereon by Grantee in good order, repair and condition. Grantee shall be responsible for all snow and ice removal from the Easement Area. Grantee shall be responsible for damage to the Fixtures, if any, arising from or out of the use by Grantee of the Easement Area, whether or not Grantee may have acted negligently. Grantee shall immediately repair any damage done to any facilities comprising or protecting the Easement Area, if any, occurring from the elements, vandalism or damage by other causes. If Grantee fails

to do so, Grantee shall pay to Amtrak all costs imposed, incurred by Amtrak or both for damage resulting from such failure, which obligation shall survive the termination of this Agreement.

4.4 No Waiver. If Amtrak at any time makes any repairs, renewals or alterations to Amtrak's Fixtures, such action shall not constitute a waiver of Grantee's obligations relative to maintenance and repairs to the Easement Area and the Fixtures pursuant to Section 4.3. Grantee also shall pay to Amtrak upon demand all fees and expenses, including reasonable attorneys' fees, incurred in connection with Amtrak enforcing its rights to make any repairs, maintenance, renewals or alterations to the Easement Area.

4.5 Grantee Improvements. Grantee shall keep all Grantee Improvements (as such term is defined in this Agreement), and any associated equipment or improvements constructed or placed upon the Easement Area by Grantee, in good order, repair and safe condition, it being understood and agreed that all such Grantee Improvements are the personal property of Grantee, and Grantee shall continue to own all Grantee Improvements after the termination of this Agreement, except as provided otherwise in Section 13.2 of this Agreement.

4.6 Utilities. Grantee, at its sole cost and expense, shall arrange for and obtain all necessary utility services required for its use. Nothing in this Article is intended to nor will be construed to obligate Amtrak to provide any such services.

4.7 Landscaping. Grantee shall maintain in a neat and healthy condition all landscaping, foliage and plant material, if any, within the Easement Area and ensure that they will not extend beyond or overhang the boundary lines of the Easement Area. If Grantee fails to so maintain the landscaping, foliage and plant material, Amtrak may perform or cause to be performed such maintenance and Grantee shall pay for the expenses incurred by or imposed on Amtrak for performing such maintenance within thirty (30) days after a bill is rendered therefor.

4.8 Fence. If, in Amtrak's sole judgment, a fence or barricade is required at any time to separate the Easement Area from the remainder of, or any portion of, the Amtrak Property, Grantee shall, at its sole expense, construct and maintain a fence or barricade, with a lockable gate to be controlled by Amtrak, along the boundary lines of the Easement Area in a location, style, design and construction acceptable to Amtrak. The installation, maintenance and repair of any fence or barricade required by Amtrak shall not unreasonably interfere with Grantee's operations or Grantee's use of the Easement Area.

4.9 Compliance with Laws. The Parties shall comply with all laws, ordinances, rules and regulations and requirements of all Federal, state, local or other governmental authorities and the various departments and quasi-governmental agencies thereof now existing or hereafter created, including without limitation, the Americans with Disabilities Act, so far as the same may affect the Easement Area. In connection therewith, the Parties shall take all actions necessary to comply with said laws, ordinances, rules, regulations and requirements.

4.10 Clearance of Right of Way. In connection with the use of the Easement Area, Grantee shall observe and be bound by the rules of Amtrak with respect to standard clearances for all railroad tracks located on or adjacent to the Easement Area. Grantee further covenants and that it shall not do or permit anything to be done on the Easement Area that will adversely affect the railroad tracks or railroad operations on Amtrak's Property. If Amtrak has knowledge that Grantee is fouling Amtrak's tracks in violation of any such requirements, whether such knowledge is actual or implied, such knowledge will not constitute a waiver and will not relieve Grantee of its obligations to indemnify Amtrak for all liability and claims resulting from any such violations.

5. GRANTEE IMPROVEMENTS

5.1 The Parties previously executed PI 184 and PI 184A approving Grantor services for the design and construction of Grantee Improvements. In the event the terms or conditions of PI 184 or PI 184A conflict with this Agreement, the terms and conditions of this Agreement shall control. However, a discrepancy shall not be deemed a conflict if it is possible to comply with each PI and agreement.

5.2 Submittal of Plans. Prior to disturbing any soil or commencing any excavation, construction, alteration, modification, repairs or improvements on, under, over or to the Easement Area, ("Grantee's Work") Grantee shall submit to Amtrak plans (including, without limitation, design drawings and specifications, schedules, estimates of costs and such other matters as Amtrak may request) (the "Plans") of Grantee's proposed improvements to the Easement Area (as and when constructed, together with Grantee's existing improvements within the Easement area, "Grantee Improvements").

5.3 Review of Plans. Amtrak may accept or reject the Plans in Amtrak's sole discretion. As a condition to any approval of the Plans, Amtrak may require Grantee to execute, and cause its contractors to execute, all documents required by Amtrak, including, but not limited to, force account agreements, permits to enter, preliminary engineering agreements (including, but not limited to, PI(s) issued under any master agreement between the Parties), site access agreements, ("Engineering Agreements"). In connection with the Plan review, the Grantor, in its sole discretion, will consider waiving the requirement of design and construction engineering agreements, PTEs and certain other items ordinarily required in connection with work on Grantor Property if the Grantor determines that such work, including the construction of drainage facilities, even if poorly designed and/or constructed, would likely not negatively impact Grantor's operations and/or infrastructure. Grantee shall pay for all costs related to Amtrak's review of Plans in accordance with the invoices and schedules that Amtrak provides. Plans that Amtrak approves shall be the "Approved Plans". Grantee acknowledges that Amtrak has other work commitments and demands that may preclude Amtrak from reviewing the Plans according to Grantee's schedule and agrees that Amtrak will not be held liable for any damages whatsoever related to delays to Grantee's schedule or Grantee's Work due to any delay in the approval of the Plans.

5.4 Cost and Performance. Grantee shall ensure that Grantee's Work (i) is performed at no cost to Amtrak and (2) conforms to the Approved Plans and the Engineering Agreements. If Amtrak determines that conditions so warrant at any time, Amtrak will provide flagmen, watchmen, inspectors, or other personnel who are deemed necessary in the opinion of Amtrak for the safeguarding of Amtrak's railroad operations and Amtrak Property, at the sole cost and expense of Grantee, and Grantee shall pay to Amtrak the full cost and expense therefor. Engineering Agreements may contain provisions, including without limitation, indemnity and insurance provisions that are more or less stringent than the requirements in this Agreement. Any default or breach of the Engineering Agreements will constitute a default and breach of this Agreement. Grantee shall, and shall cause its contractors to comply with, the Engineering Agreements, and all of Amtrak's then current safety, operations, security, environmental and engineering procedures.

6. LIENS AND CHARGES

6.1 Discharge of Liens. Neither Grantee's work nor any other work of any nature performed by Grantee related to the Easement Area is intended to be or will be deemed to be for the use or benefit of Amtrak. Grantee shall not permit a mechanic's or other lien to be filed against any property or interest of Amtrak. If any such lien is filed, Grantee shall, within twenty (20) days of the attachment of any such lien or encumbrance, discharge or cause such lien to be discharged.

6.2 No Consent. Nothing in this Agreement will be deemed or construed in any way as giving Grantee any right, power or authority to contract for or permit the rendering of any services or the furnishing of any materials that would give rise to the filing of any lien against the Easement Area or any part thereof, nor as evidencing Amtrak's consent that the Easement Area may be subject to any mechanic's, laborer's or materialman's lien.

7. SIGNS

Permitted Signage. Grantee, at its sole cost, may place signs relating to its commuter rail service, including but not limited to, advertisements, vehicular and pedestrian traffic, safety and security in the Easement Area. Grantee shall comply with all applicable laws, rules, and regulations of all governmental agencies having jurisdiction thereof and pay all permit and license fees relating to the placement of any Grantee signs.

8. HAZARDOUS USE

8.1 Insurance Requirements. Grantee shall comply with all applicable regulations, recommendations, rules and requirements of Amtrak and any insurance carrier which insures or participates in insuring the Easement Area. Grantee shall not permit any article to be brought upon or any act to be done upon or about the Easement Area that will cause cancellation of any policy of insurance thereon or increase rates for such insurance beyond those usually charged for similar properties used for the purpose herein authorized.

8.2 Explosive or Flammable Materials. Without limiting the generality of the foregoing, except for gasoline for use in the gas tanks of the motor vehicles of Grantee's employees and contractors, Grantee shall not use or keep gasoline, dynamite or other explosive or flammable materials in any form upon the Easement Area, or bring upon, store or allow to be stored upon the Easement Area any materials of a dangerous or highly flammable nature or of such nature as to cause an extra fire risk or hazard, and will comply with all such reasonable rules and regulations as Amtrak may prescribe, looking to prevention of fires and compliance with insurance policies.

9. ENVIRONMENTAL

9.1 "Environmental Law" Defined. For the purpose of this Agreement, "Environmental Law" means, without limitation, all applicable laws, statutes, codes, acts ordinances, orders, judgments, decrees, injunctions, and requirements of all federal, state and local governments, departments, commissions, boards, bureaus, courts, authorities, agencies, officials and officers, relating in any manner or way to:

(a) soil, water, air, noise, other environmental standards or

(b) the control and/or abatement of environmental pollution and/or environmental hazards, which now or at any time hereafter may be applicable, or claimed to be applicable, whether or not the claim is or is not determined to be well-founded.

9.2 Compliance with Environmental Law. Grantee shall use and maintain the Easement Area in full compliance with Environmental Law. Grantee shall not store or permit to be stored any hazardous waste on the Easement Area. If Grantee fails to comply with any Environmental Law, Amtrak may, after giving Grantee reasonable notice of such failure, and in addition to any other remedies hereunder or at law or in equity, act to bring the Easement Area into compliance, and Grantee shall repay to Amtrak all costs incurred by Amtrak in connection therewith including, but not limited to, fines, consulting, engineering, construction, evacuation, excavation, removal, remediation and legal costs. In the event of emergency or lawful government order, Amtrak may bring the Easement Area into compliance immediately at Grantee's expense. In such event, Amtrak will notify Grantee as soon as feasible of the emergency and/or governmental order, and provide Grantee with the opportunity to participate in all necessary actions to bring the Easement Area into compliance.

9.3 Remedies. If Grantee fails to comply with any Environmental Law, in addition to any other remedies it may have hereunder or at law or in equity, Amtrak may act to bring all affected portions of the Easement Area into compliance. Grantee shall repay to Amtrak all costs incurred by Amtrak in connection therewith. Amtrak will notify Grantee before undertaking action but in the event of emergency or lawful government order, Amtrak retains the right to bring the affected portions of the Easement Area into compliance immediately at Grantee's expense. In such event, Amtrak will notify Grantee as soon as feasible of the emergency and/or governmental

order, and provide Grantee with the opportunity to participate in all necessary actions to bring the affected Easement Area into compliance.

9.4 Notice of Non-Compliance with Environmental Law. In the event Grantee's use of the Easement Area causes a condition of non-compliance to occur (including but not limited to instances of spills), Grantee shall notify Amtrak of such condition, including: The nature of the non-compliance, the reporting (if any) of the condition to the appropriate governmental agency, and the actions undertaken by Grantee to cure the non-compliance. Such notice to Amtrak will be made as soon as practicable, but in no instance will it be more than two days following the event of non-compliance.

9.5 Soil Disturbance Prohibited.

9.5.1 Grantee (and its contractors and agents) shall not disturb the soil or perform any environmental or geotechnical testing on the Easement Area for any reason without (i) notifying Amtrak of its desire to do so; (ii) discussing the nature and extent of the proposed soil disturbance or testing with the Amtrak Environmental and Sustainability Group (or its successor); (iii) presenting a proposed testing and sample collection and analysis plan to Amtrak for its review and approval; (iv) obtaining the express permission of Amtrak to conduct the agreed-to soil disturbance or testing; and (v) indicating if any such test results require either notification or submission to a federal, state or local regulatory agency. Amtrak shall have the right, but not the obligation, to be present at any and all such soil disturbance or testing activities and to take split samples.

9.5.2 Grantee shall immediately provide Amtrak with a copy of the test results at no cost to Amtrak.

9.5.3 Any contractor engaged by Grantee to perform such soil disturbance or testing shall execute Amtrak's temporary permit to enter agreement before performing any such activities.

9.5.4 Grantee, its contractors and agents shall comply with all applicable federal, state, and local laws, regulations, ordinances, and orders concerning the environment and/or waste generation and disposal. At all times, they shall employ best management practices ("BMPs") in connection with the performance of their work. As used herein, the term "BMPs" means effective, practical, structural and/or nonstructural methods which prevent and/or reduce the movement of sediment, nutrients, pesticides and other pollutants from the land to surface and/or groundwater, and/or which otherwise protect air, soil and water quality from potential adverse effects.

9.5.5 If the soil disturbance or the environmental or geotechnical tests performed on the Easement Area indicate contamination of Amtrak property (or property adjoining Amtrak property) at levels requiring reporting, further investigation, testing, monitoring and/or remediation as required by the New Jersey Department of Environmental Protection, the United States Environmental Protection Agency or any other regulatory agency of competent jurisdiction ("Environmental Activities"), all such Environmental Activities within the Easement Area shall be at the sole cost and expense of Grantee, regardless of the extent thereof, and regardless of whether any action of Grantee (or its contractors or agents) caused or contributed to the contamination or condition.

9.5.6 Grantee shall promptly inform Amtrak of all communications with any governmental authority relating to any such Environmental Activities, and Amtrak shall be invited to attend any relevant meetings. Grantee shall provide Amtrak with all plans and/or submissions for any such Environmental Activities and Amtrak shall have the right to approve such plans and/or submissions prior to their implementation. Grantee will promptly provide Amtrak with a copy of any waste manifests, and such waste manifests shall in no event identify Amtrak as a generator. Amtrak reserves the right to require Grantee to provide to Amtrak a copy of the results of any further tests conducted by or for Grantee on any such wastes. Amtrak also reserves the right to review and approve the disposal site for any such wastes. Grantee (and its contractors and agents) shall dispose of all waste and contamination using their own EPA generator number(s). In no event shall Amtrak be identified as the generator. Grantee will promptly provide Amtrak with a copy of any waste manifests.

9.5.7 Amtrak retains the right to alter, suspend, cancel or otherwise modify Grantee's project work schedule pending the resolution of any of the above environmental issues. Amtrak shall not be held responsible for any claims related to any such changes in Grantee's schedules, including without limitation, claims related to damages resulting from any such delays or cancellations.

9.5.8 Amtrak may notify Grantee of any known or suspected noncompliance with the foregoing provisions and the action to be taken. Grantee shall, after receipt of such notice, promptly take corrective action in accordance with all applicable federal, state and local requirements. If Grantee fails or refuses to comply promptly, Amtrak may issue an order stopping all or part of the project work until satisfactory corrective action has been taken. In addition, Amtrak may immediately undertake necessary corrective actions; the cost and expense of all such actions shall be borne by Grantee. No claims by Grantee for reimbursement related to costs and expenses charged to Grantee for

corrective actions undertaken by Amtrak, nor time lost due to any such orders, shall be made the subject of a claim for excess costs or damages by Grantee.

9.6 Environmental Conditions Report. Grantee shall pay for all costs and expenses associated with the performance of an "Environmental Conditions Report" of the Easement Area, which may be required at Amtrak's sole discretion, upon the expiration or other termination of this Agreement. Such Environmental Conditions Report, conducted by Amtrak or a recognized engineering firm at Amtrak's discretion, will be for the purpose of determining the extent of any environmental impairment caused by Grantee's use and occupancy of the Easement Area.

9.7 Survival. The provisions of this Article will survive the termination of this Agreement.

10. INDEMNIFICATION

10.1 Amtrak will, without regard to negligence or fault, indemnify and hold NJ TRANSIT harmless from and against any and all claims for liability for personal injury, death or property damage by Amtrak employees arising in the course of their employment and by ticketed Amtrak passengers whose claims arise as a result of an act or occurrence on the Easement Area.

10.2 Each party will, without regard to negligence or fault, indemnify and hold the other harmless from and against any and all claims for liability for personal injury, death or property damage by any person (other than employees or ticketed passengers of a Party) alleging injury or damage occurring on the Grantor Property maintained by that Party as set forth herein. For the purposes hereof, the Easement Area shall be deemed to be maintained by NJ TRANSIT.

10.3 NJ TRANSIT will, without regard to negligence or fault, indemnify and hold Amtrak harmless from and against all claims for liability for personal injury, death or property damage by NJ TRANSIT employees arising in the course of their employment or by ticketed NJ TRANSIT passengers whose claims arise as a result of an act or occurrence on the Easement Area.

10.4 Each Party agrees to provide the other prompt notice of all claims or suits wherein the other Party is or may be liable under this indemnity provision. Each Party agrees further to provide an indemnifying party full cooperation in the investigation of defense of any claim or suit covered herein.

11. INTENTIONALLY DELETED

12. INSURANCE

Procurement and Maintenance of Insurance. The Grantee shall procure and maintain or cause its contractors to procure and maintain, at all times during the term of this Agreement, at its own cost and expense, the insurance specified below. All insurance required pursuant to the terms hereof ("Required Insurance") shall be placed with insurance carriers licensed to do business in the state where the Easement Area is located. The Grantee shall furnish a certificate of insurance giving evidence of the Required Insurance coverage prior to the exercise of this Agreement and on an annual basis thereafter. All Required Insurance shall provide for thirty (30) days' prior written notice to be given to the Grantor in the event coverage is substantially changed, canceled, or non-renewed. No acceptance of an insurance certificate required hereunder shall constitute or be construed as a waiver of the insurance requirements of this article, which shall be and remain the sole responsibility of the Grantee as to compliance therewith. If this Agreement exceeds five (5) years, the Grantor reserves the right to periodically reasonably modify the conditions/limits of insurance listed herein to maintain coverage in accordance with railroad industry standards with forty-five (45) days notice to Grantee. The Required Insurance shall be as follows:

(a) General Liability/Railroad Liability Insurance. General Liability or Railroad Liability insurance covering the Grantee, and the employees, officers, agents, contractors, subcontractors, and representatives of the Grantee on a primary basis with the following limits and for the following risks and hazards:

(1) Excess Liability insurance covering third party claims against and liabilities of Grantee, its agents, and employees for property damage, bodily injury, personal injury and death for which the Grantee is required to indemnify the Grantor with a combined single limit not less than the liability ceiling set forth in 49 U.S.C. Section 28103(a)(2) [or a liability cap set forth in a successor or similar statute], as adjusted from time to time by the United States Secretary of Transportation (or such successor or similar officer).

(2) Intentionally Deleted.

(3) The Required Insurance shall include, but not by way of limitation:

(A) Contractual Liability coverage endorsed to confirm that this Agreement is an insured contract under the policy(ies) with no exclusion or restriction related to railroad operations or work within fifty (50) feet of a railroad;

(B) Cross Liability endorsement;

(C) Premises/Operations;

(D) Products/Completed Operations;

(E) Independent Contractors;

(F) Sudden and Accidental Pollution (30/90);

(G) Punitive and Exemplary Damages shall not be excluded, or the policies may be silent regarding such damages;

(H) Certified and Non-certified Terrorism; and

(I) Any Explosion Collapse, and Underground (X-C-U) exclusions.

(4) The Grantor and its employees, officers, agents, contractors, subcontractors, representatives, and commuter agencies and railroads operating in the vicinity of the Easement Area (collectively with Grantor, "Additional Insured Parties") shall be endorsed as additional insured on all policies comprising the Required Insurance.

(5) Intentionally Deleted.

(6) In the event that the policy limits for the Required Insurance are satisfied by a combination of primary and excess policies in "layers," all excess policies shall provide that they drop down in the event of reduction or exhaustion of underlying policy limits.

(7) Intentionally Deleted.

(8) If any of the Required Insurance (that is not required to be provided on an occurrence basis) is provided on a claims-made or occurrences-reported basis, then, in addition to coverage requirements above, such policy shall provide that:

(A) The retroactive date shall coincide with or precede the effective date of this Agreement, or the effective (inception) date of the first such policy that was written on a claims-made or occurrences-reported basis. If any insurance that was previously written on a claims-made or occurrences-reported basis is subsequently written on an occurrence basis,

the Grantee shall procure "prior acts" coverage on the new occurrence policy(ies) with a retroactive date, and with effect for all occurrences not known or reported under the preceding claims-made and occurrences reported policies.

(B) The policy shall allow for the reporting of circumstances or incidents that might give rise to future claims; and

(C) If claims-made or occurrences-reported insurance is terminated for any reason, the Grantee shall purchase an extended reporting provision of at least two (2) years to report claims and occurrences arising from the Easement, unless such coverage is not commercially available, in which case a shorter extended reporting provision will be mutually agreed to by Amtrak and NJ TRANSIT.

(b) Property Insurance. All risks property insurance, covering all damage to the Grantee property. Coverage will be on a replacement cost basis and also include coverage for train derailment or overturn, flood and earthquake.

(c) Automobile Insurance. Automobile liability insurance covering all automobiles owned, leased, rented, or used by the Grantee, its contractors, agents and employees, in connection with this Agreement or any operations or activities incidental thereto. Such insurance shall provide auto liability insurance coverage with combined single limits of no less than two million dollars ($2,000,000) per accident or occurrence for bodily injury and property damage liability.

(d) Workers Compensation and Employers Liability Insurance. The Grantee - will require and ensure that its contractors and subcontractors to carry workers compensation insurance in accordance with the laws of New Jersey covering all applicable employees. Such insurance shall include Employers Liability coverage with limits of no less than one million dollars ($1,000,000) each employee or accident. If the Grantee or any of its contractors or subcontractors are considered a railroad(s) subject to the provisions of the Federal Employers Liability Act ("FELA") rather than state workers compensation laws, the employers liability insurance or excess liability insurance shall be endorsed to provide coverage for FELA benefits and liabilities, and the required limits shall be increased to not less than fifty million dollars ($50,000,000) per occurrence.

(e) Construction and Maintenance Activities. Prior to the commencement of any development, construction, reconstruction, maintenance, or repair activities on the Easement Area, the Grantee, will require their contractors and subcontractors to obtain the insurance coverage specified in Exhibit D attached hereto, and incorporated herein; or the Grantee, or their contractors may, at their option, provide the coverage for any or all contractors and subcontractors, providing that the evidence of insurance submitted by the Grantee, provided, however, that the foregoing requirements shall not apply to routine maintenance, routine replacement, or minor repairs

performed by the Grantee, or the Grantee' tenants, contractors, or subcontractors, and for which the Grantee do not require flagging protection. It is agreed that insurance required pursuant to this Section shall be considered as Required Insurance.

(f) Intentionally Deleted.

(g) Self Insurance. The Grantee shall have the right to self-insure with respect to the insurance required in this Section provided the same does not thereby decrease the insurance coverage or limits required or adversely affect the protection afforded to the Grantor or any of the Additional Insured Parties.

(h) Certificates. The Grantee shall furnish certificates of insurance if insurance is purchased, or a statement of compliance with this Section through self-insurance, evidencing compliance with the requirements set forth in this Section contemporaneously with the effective date of this Agreement, and annually thereafter. The policies shall be endorsed to (1) provide that the policy shall not be cancelled or coverage reduced without thirty (30) days prior written notice of cancellation, non-renewal or other material change to the Grantor - and (2) name the Additional Insured Parties, as additional insureds with respect to occurrences relating to the Grantee' operations.

(i) Erosion of limits. In the event that paid claims, losses or occurrences reduce limits to less than eighty percent (80%) of the combined single limit set forth in Section 12(a)(1) per occurrence, due to the operation of an aggregate limit provision in the policies, the Grantee - shall immediately notify the Grantor- and shall reinstate or replace the insurance to the required limits.

(j) Insurance not a limitation on indemnity. The foregoing insurance coverage is not intended to, nor does it, limit the liability of Grantee to defend, indemnify and hold harmless as set forth in the indemnity provisions herein.

(k) Survival. The Grantee responsibility under this Section shall apply to any liability arising out of an accident or other incident occurring on or after the effective date of this Agreement, and shall extend beyond the date of termination of this Agreement with respect to any event occurring or liability arising during the term of this Agreement; provided, however, that as respects any required liability insurance provided on a claims-made or occurrences-reported or similar basis, the Grantee, as applicable, shall comply with the provisions of Section 12(a)(8) and 12.4 of this Agreement.

12.4 Additional Terms. If any liability insurance specified above will be provided on a claims-made basis, then in addition to the coverage requirements above, such policy will provide that: (i) The retroactive date will coincide with or precede Grantee's entry onto the Easement Area or other Amtrak property (including subsequent policies purchased as renewals or replacements);

(ii) The policy will allow for the reporting of circumstances or incidents that might give rise to future claims; (iii) Grantee shall use its best efforts to maintain similar insurance for at least three (3) years following the completion of Grantee' operations on the Easement Area or other Amtrak property, including, without limitation, the requirement of adding Additional Insured Parties as additional insureds; and (iv) If the insurance is terminated for any reason, Grantee agrees to purchase an extended reporting provision of at least two (2) years to report claims arising from its operations on the Easement Area or other Amtrak property. Further, any additional coverages required by the United States Department of Transportation, the Environmental Protection Agency and/or related state and local laws, rules and regulations shall be complied with.

12.5 Compliance with Amtrak's Insurance. Grantee and its contractors shall comply with all regulations, recommendations, rules and requirements of Grantor and any insurance carrier which insures or participates in insuring the Property and Grantee shall not knowingly permit any article to be brought upon or any act to be done upon or about the Property that shall cause cancellation of any policy of insurance thereon or increase rates for such insurance beyond those usually charged for similar properties used for the purpose herein authorized.

13. TERMINATION DUE TO ABANDONMENT.

Termination Due to Abandonment. Said Easement shall automatically terminate upon the Grantee's Abandonment of commuter operations in the Easement Area. "Abandonment" shall mean Grantee's formal abandonment of its operation of commuter rail service.

14. INTENTIONALLY OMITTED.

15. ASSIGNMENT

Successors and Assigns. Grantee may not assign this Agreement or any of the rights hereunder, to any entity other than another commuter railroad, without the prior consent of Amtrak which consent Amtrak may grant, deny or condition in Amtrak's sole discretion.

16. DEFAULT AND REMEDIES

16.1 Events of Default. The occurrence of any of the following events will constitute an Event of Default by Grantee:

16.1.1 Grantee fails to pay to Amtrak as and when due any sum payable to Amtrak by Grantee under this Agreement;

16.1.2 failure to maintain any insurance required to be maintained by either Grantee or any of Grantee's contractors;

16.1.3 Intentionally Deleted;

16.1.4 After the commencement of construction of any Grantee Improvements, if the Grantee fails to diligently proceed with construction of said improvements for one hundred eighty (180) days or longer. For the purposes of this provision, any delay due to the inability of Amtrak to dedicate the personnel or resources necessary to support the construction project shall not be deemed a failure to proceed. This provision is also specifically subject to the force majeure terms set forth in Section 17.9 herein below.

16.1.5 a default occurs and continues beyond any applicable cure period under any of the Engineering Agreements;

16.1.6 if Grantee fails to perform or comply with any other terms or covenants contained in this Agreement;

16.1.7 if Grantee files, or suffers to be filed against it, a petition in bankruptcy and fails to have any involuntary filing dismissed within sixty (60) days after the date of such filing;

16.1.8 if Grantee is declared insolvent by a court of competent jurisdiction, or a receiver or trustee is appointed for the Grantee;

16.1.9 if Grantee makes any general assignment for the benefit of creditors.

16.2 Prior to a declaration of Default pursuant to Section 16.1.1, 16.1.4 or 16.1.6, Grantor shall provide Grantee with ninety (90) days' prior notice of Grantee's noncompliance hereunder. Grantee shall perform, cure or comply with the terms or conditions resulting in the Event of Default, within ninety (90) days following receipt of written notice by Amtrak giving notice of such default, or if such cure is not capable of being made with such ninety (90) day period, Grantee shall commence to cure such failure within such ninety (90) day period and thereafter continue to duly prosecute such cure to completion. During such cure period, upon the written request of either Party, submitted pursuant to the terms of the Notice provisions set forth below, the other Party will make a senior officer of such Party available to discuss the matter in an attempt to amicably resolve any Default dispute.

16.3 Remedies. Upon the occurrence of an Event of Default, Amtrak may take any or all actions, rights or remedies available to Amtrak at law or in equity.

16.4 No Waivers. No action or remedy taken or omitted by Amtrak following an Event of Default will be deemed a waiver of such Event of Default and an express waiver of any particular Event of Default will not be deemed a waiver of any other Event of Default, nor will any failure on the part of Amtrak to compel a fulfillment of any one or more of the covenants,

terms and conditions herein contained be held to be a waiver of its right to enforce the same at any time thereafter during the term this Agreement.

16.4 Waiver of Jury Trial. The Parties do hereby waive trial by jury in any action, proceeding or counterclaim brought by either party against the other on any matter whatsoever arising out of or in any way connected with this Agreement or Grantee's use of the Easement Area or arising out of or in any way connected with any claim of injury or damage arising out of or in connection with this Agreement or such use.

17. MISCELLANEOUS

17.1 Notices. Every notice, consent, approval, or other communication that may or is required to be given, served or sent by one party to the other party pursuant to this Agreement is required to be in writing and shall be given by United States certified or registered mail, return receipt requested, or by a nationally recognized overnight delivery service, with all delivery and postage prepaid. Notices are deemed to have been given on the day actually received or refused, or if unclaimed, on the third day following the day on which the same will have been sent by a nationally recognized overnight delivery service or deposited with the United States Post Office.

Any such communication if intended for Grantee will be addressed as follows:

New Jersey Transit
One Penn Plaza East
Newark, New Jersey 07105
Attention: Elizabeth Station Program Manager, Capital Projects and Programs

With a copy to:

New Jersey Transit
One Penn Plaza East
Newark, New Jersey 07105
Attention: Senior Director, Capital Projects and Programs

And

New Jersey Transit
One Penn Plaza East
Newark, New Jersey 07105
Attention: Senior Director, Real Estate

Any such communication if intended for Amtrak will be addressed as follows:

National Railroad Passenger Corporation
30th Street Station
2955 Market Street
Philadelphia, PA 19104
Attention: Senior Director, Real Estate Development

With a copy to:

National Railroad Passenger Corporation
1 Massachusetts Avenue, NW
Washington, DC 20001
Attention: General Counsel

And

National Railroad Passenger Corporation
30th Street Station
2955 Market Street
Philadelphia, PA 19104
Attention: Chief Engineer

Either party may, any time, change its address for the above purposes by sending a written notice to the other party stating the change and setting forth the new address. Any notice that may or is required to be given by either party in connection with this Agreement may be given by such party's attorney.

17.2 Subordination. This Agreement and the Easement is subject and subordinate to all restrictions, agreements and easements of record, and Amtrak does not provide any warranty of title with respect to the Easement Area. This Agreement and the Easement is also subject and subordinate to any or all existing ground leases of record, if any, and to any or all existing mortgages of record which may now or hereafter affect such leases or the real property of which the Easement Area forms a part, and to all renewals, modifications, consolidations, replacements and extensions thereof. This Easement is expressly subject and subordinate to Grantor's existing mortgage in favor of the United States of America. This Easement Agreement shall not be subordinate to any future ground lease or mortgage unless such owner or holder of the ground lease or mortgage signs a nondisturbance agreement in favor of Grantee in commercially reasonable form. This clause will be self-operative and no further instrument of subordination will be required by any mortgagee. However, in confirmation of such subordination, Grantee will execute promptly upon request any certificate to that effect upon request by Amtrak.

17.3 Not a Joint Venture. It is understood and agreed that neither this Agreement nor the agreements herein contained are intended, nor are the same ever to be construed, so as to create

a partnership by and between Amtrak and Grantee, or to make Amtrak and Grantee joint venturers, or to make Amtrak in any way liable or responsible for the debts or losses of the Grantee.

17.4 No Change or Modification. No change or modification of any of the covenants, terms or provisions hereof will be valid unless in writing and signed by the Parties hereto.

17.5 Incorporation of Terms. This Agreement, along with any exhibits and amendments hereto, encompasses the entire real estate agreement of the Parties related to the conveyance of the Easement, and supersedes all previous understandings and agreements between the Parties, whether oral or written. The Parties hereby acknowledge and represent that said Parties have not relied on any representation, assertion, guarantee, warranty, collateral contract or other assurance, except those set out in this Agreement, made by or on behalf of any other Party or any other person or entity whatsoever, prior to the execution of this Agreement. The Parties hereby waive all rights and remedies, at law or in equity, arising or which may arise as the result of a Party's reliance on such representation, assertion, guarantee, warranty, collateral contract or other assurance. Notwithstanding the foregoing, the Parties acknowledge there are Engineering Agreements related to the Grantee Improvements intended to be constructed on the Easement Area.

17.6 Severability. The provisions of this Agreement are severable and it is the intention of the Parties hereto that if this Agreement cannot take effect in its entirety because of the final judgment of any court of competent jurisdiction holding invalid any part or parts thereof, the remaining provisions of the Agreement will be given full force and effect as completely as if the part or parts held invalid had not been included therein.

17.7 Governing Law/Venue. This Agreement will be governed by and construed under the laws of the State of New Jersey, and all disputes related to this Agreement will be exclusively adjudicated in the federal courts with jurisdiction over New Jersey.

17.8 Responsibility of Grantee for its Employees. Grantee, in the performance of any and all work by Grantee under the terms of this Agreement or otherwise, upon or adjacent to the Easement Area, will furnish all labor and supervisory forces of every kind. Grantee shall employ or contract, and pay from Grantee's own funds all persons or contractors engaged in the performance of such work and all such persons or contractors will be and remain the sole employees or contractors, as the case may be, of Grantee and subject to Grantee's supervision, direction and control.

17.9 Force Majeure. Each Party will be excused from performance of any of its obligations hereunder except obligations involving the payment hereunder of money to the other Party, where such nonperformance is occasioned by any event beyond its control which shall include, without limitation, any order, rule, or regulation of any federal, state, or local government body, agent, or instrumentality, work stoppage, accident, terrorist attack, natural disaster, or civil disorder; provided, that the Party excused hereunder shall

useallreasonable efforts to minimize its nonperformance and to overcome, remedy, or remove such event in the shortest practical time.

17.10 Authority. Each Party hereby covenants that it has full power and authority to enter into this Agreement upon the terms and conditions set forth herein. Each of the persons executing this Agreement on behalf of each Party does hereby covenant and warrant that each person signing on behalf of Amtrak or Grantee, as applicable, is authorized to do so and that no other actions are needed by such Party to make this Agreement valid and binding on such Party other than the execution and delivery by the person(s) executing this Agreement.

17.11 Limitation of Liability. Grantee acknowledges and agrees that the liability of Amtrak (which for purposes of this Article will include all officers, directors, employees and shareholders of any corporation) under this Agreement will be limited to Amtrak's interest in the Easement Area and any judgments so rendered will not give rise to any right of execution or levy against Amtrak's other assets or on any assets of any other person or entity. The provisions hereof will inure to Amtrak's successors and assigns including any Mortgagee.

17.12 Equal Opportunity.

17.12.1 Grantee shall not discriminate against any employee or applicant for employment because of race, color, religion, sex, age, or national origin, handicap or veteran status. Grantee shall take affirmative action to ensure that applicants are employed, and that employees are treated during employment, without regard to their race, color, religion, sex, age or national origin, handicap or veteran status. Such action will include, but not be limited to the following: employment, upgrading, demotion, or transfer; recruitment or recruitment advertising; layoff or termination; rates of pay or other forms of compensation; and selection for training, including apprenticeship. Grantee agrees to post in conspicuous places, available to employees and applicants for employment, notices setting forth the provisions of this Equal Opportunity clause.

17.12.2 Grantee shall comply with all provisions of the Executive Order No. 11246 of September 24, 1965, as amended by Executive Order No. 11375 of October 13, 1967, and of the rules, regulations and relevant orders for the Secretary of Labor, all of which are copies incorporated herein by reference.

17.13 Brokers. The Parties represent and warrant that it knows of no real estate broker, salesperson or other party having a right to commission in connection with the transaction under this Agreement or who may be otherwise entitled to any payment or other compensation in connection with such transaction. The Parties agree to indemnify and each other harmless from

any costs, expenses and liability resulting to one Party as a result of any claims made by any broker or other Party because of this transaction.

17.14 Lawfulness of Use. Neither any statement by Amtrak in this Agreement as to Grantee's utilization of the Easement Area nor any consent of Amtrak of such utilization will be deemed or construed to constitute a representation or warranty by Amtrak that any such utilization that may be conducted in or on the Easement Area is lawful or permissible.

17.15 Covenants To Run With Land. The agreements and covenants contained herein will run with the land and this Agreement will be binding upon and inure to the benefit of the parties hereto and their respective heirs, executors, administrators, successors and assigns.

17.16 Intentionally Deleted.

17.17 All potential liability of Grantee hereunder shall, to the extent applicable, be further subject to the provisions of the New Jersey Tort Claims Act, N.J.S.A. 59:1-1 et seq., and the New Jersey Contractual Liability Act, N.J.S.A. 59:13-1 et seq. No covenant, representation or obligation of the Grantee shall be deemed or construed to create or constitute a debt, liability or a loan or pledge to the credit of the State of New Jersey. Additionally, nothing herein shall be deemed to waive Amtrak's rights under Federal law.

SIGNATURES APPEAR ON THE FOLLOWING PAGE

IN WITNESS WHEREOF, the Parties hereto have caused these presents to be executed by their proper officers, thereunto duly authorized, as of the day and year first above written.

DESCRIPTION OF PROPOSED EASEMENTS E2H & E2I
NEW JERSEY TRANSIT ELIZABETH STATION
CITY OF ELIZABETH, UNION COUNTY, NEW JERSEY

PROPOSED EASEMENT E2H

BEGINNING at a point in the northwesterly right of way line of lands now or formerly of the Pennsylvania Railroad as described in Deed Book 5468 Page 762, where the same is intersected by the easterly sideline of North Broad Street, variable width, said point being 51.25 feet right and northwesterly of United New Jersey Railroad and Canal Company Baseline Station 687+91.77 as shown on "New Jersey Transit Corporation ELIZABETH STATION PENN CENTRAL (U.N.J.R.R. & CANAL CO.)" M.P. #14.5 Line Code #1401, Revised May 26, 1982, G-1664, said point having a New Jersey State Plane Coordinate of NAD83 of North: 668366.9 East: 571094.5 (US Survey Feet measured in 2010); and runs thence the following two (2) courses along said right of way line described in Deed Book 5468 Page 762.

1. North 28 degrees 38 minutes 23 seconds East 270.71 feet to an angle point; thence
2. North 28 degrees 40 minutes 42 seconds East 304.52 feet to a point on the southerly sideline of Chestnut Street, being 25 feet southwesterly as measured perpendicular from the centerline of Chestnut Street; thence
3. Along said southerly sideline of Chestnut Street, South 59 degrees 32 minutes 27 seconds East 28.12 feet to a point; thence
4. Southwesterly along a line being 5.58 feet (5 feet 7 inches) northwesterly as measured perpendicular to the centerline of the most westerly track, South 28 degrees 43 minutes 56 seconds West 587.54 feet to a point on the easterly sideline of North Broad Street; thence
5. Along said sideline, North 35 degrees 36 minutes 13 seconds West 30.38 feet to the point and place of BEGINNING.

Containing 16,153 square feet or 0.3708 acres of land.

PROPOSED EASEMENT E2I

BEGINNING at a point in the northerly sideline of East Broad Street, 70 feet wide right of way, 50.72 feet southeasterly and right of Baseline Station 668+23.90, said point having a New Jersey State Plane Coordinate of NAD83 of North 668289.7 East 571168.5 (US Survey Feet measured 2010); and runs thence

1. Along a line that connects said sideline of East Broad Street with the easterly sideline of North Broad Street, North 61 degrees 39 minutes 35 seconds West 26.66 feet to a point; thence
2. Northeasterly along a line being 5.58 feet (5 feet 7 inches) southeasterly as measured perpendicular to the centerline of the most southeasterly track centerline, North 28 degrees 44 minutes 58 seconds East 605.27 feet to a point on the southerly sideline of Chestnut Street, being 25 feet southwesterly as measured perpendicular from the centerline; thence
3. Along said southerly line of Chestnut Street, South 59 degrees 32 minutes 27 seconds East 34.43 feet to a point on the southeasterly railroad right of way line set 40 feet southeasterly as measured perpendicular to the centerline of the most southeasterly track; thence
4. Along a said railroad right of way line, South 28 degrees 44 minutes 58 seconds West 565.74 feet to a point; thence
5. South 23 degrees 22 minutes 20 seconds East 17.40 feet to a point on the aforesaid northerly sideline of East Broad Street; thence
6. Along said sideline of East Broad Street, South 66 degrees 37 minutes 40 seconds West 35.00 feet to the point and place of BEGINNING.

Containing 20,966 square feet, 0.4813 acres of land.

The basis of bearings is the New Jersey State Plane Coordinate System (NAD83) measured November, 2010.

This description was prepared in accordance with a plan entitled, "PROPOSED EASEMENTS E2H & E2I FOR NEW JERSEY TRANSIT-ELIZABETH STATION CITY OF ELIZABETH UNION COUNTY, NEW JERSEY", prepared by Borbas Surveying and Mapping, dated December 18, 2017.

EXHIBIT C

GRANTORS' RESERVATIONS, USE CONDITIONS, REQUIREMENTS AND RESTRICTIONS

Without limiting any of the other provisions set forth in the Agreement, the following conditions will apply to the use of the Easement Area by Grantee hereunder.

1. Grantee shall not construct or permit the construction of any improvement on the Easement Area without first obtaining Amtrak's clearance requirements from Amtrak and Grantee covenants and agrees to abide by such clearance requirements; provided, however, that such clearances may be modified and adjusted to accommodate the Grantee Improvements, subject to the approval of Amtrak's Engineering Department as to property or improvements owned by Amtrak; clearance from property of others will be resolved between the Grantee and the third party owner.

2. Amtrak will retain access to any buried or overhead cables/conduits/utilities. Before and during any digging, paving or construction, all cables/conduits must be identified and protected by Grantee.

3. The Easement granted hereby will be under and subject to reservations and permanent rights in favor of Amtrak to enter in, on, upon, under or over the Easement Area to install, inspect, use, operate, maintain, repair, renew, replace and remove any and all communication and signal cables, duct lines and any and all sewer, pipe, wire, occupancies in, on, upon, under, or over the Easement Area, whether such occupancies now exist or will exist in the future or are recorded or not, together with the right, at Amtrak's sole discretion, to grant permanent easements and licenses in respect of such occupancies and uses and to retain all remuneration or revenues generated therefrom. Notwithstanding the foregoing, any new leases or licenses may not unreasonably interfere with Grantee's operations on the Easement Area.

4. All Amtrak support and safety protection costs associated with Grantee's use of the Easement Area will be at Grantee's expense. Grantee shall not be responsible for Amtrak support and safety protection costs associated with the use, operation, maintenance or improvements of Amtrak or third parties. Prior to their entry upon the Easement Area, all Grantee personnel and all personnel of Grantee's contractors and subcontractors, must at the sole cost and expense of Grantee and its contractors and subcontractors, respectively, attend any and all safety training required by Amtrak's Engineering Department.

5. Grantee shall ensure that all catenary structures of Amtrak, if any, will remain at all times accessible to Amtrak.

6. Grantee covenants and agrees with Amtrak that Grantee shall not erect, construct, excavate, repair or maintain any structure in, on or under the Easement Area that will materially, adversely affect the adjoining Fixtures, structures, railroad tracks or railroad operations conducted thereon, nor encroach upon, remove or weaken lateral support from the aforesaid railroad tracks. Grantee covenants and agrees with Amtrak that Grantee shall not do or permit to be done any other thing in, on or under the Easement Area that will materially, adversely affect the adjoining Fixtures, railroad tracks or railroad operations conducted thereon, nor encroach upon, remove or weaken lateral support from the aforesaid railroad tracks. The railroad viaduct supports, track alignment, ballast and abutments are not to be damaged or undermined by any excavation, construction or utility work performed on the Easement Area by the Grantee or its contractors. Nothing in this paragraph is intended to prevent Grantee from erecting the Grantee Improvements.

7. Grantee covenants and agrees that, except for any drainage adequately contained within appropriate drainage facilities, it will prevent any thing or any action on the Easement Area to cause drainage onto adjacent railroad tracks or any adjacent property including Amtrak's remaining property (excepting Grantee's adjacent property). Grantee shall prevent any action, which may cause erosion or damage to the adjacent railroad embankment or ballast or undermine the integrity of the Amtrak's railroad right-of-way. Grantee shall take all actions necessary to repair any such erosion or any undermining of the integrity of the adjacent property or railroad Fixtures.

8. Neither Grantee nor its contractors will operate any lifting or boom equipment within a 25 foot envelope around any transmission or catenary wires except with permission of Amtrak. Grantee shall coordinate with Amtrak and determine what precautions and procedures must be followed and procure any necessary assistance of Amtrak.

9. Before and during any digging, excavation, paving or construction on the Easement Area, Grantee must identify, locate and protect all buried utilities, cables, conduits, signal and communications facilities, all other buried facilities and all Fixtures. All such work must be performed in accordance with Amtrak's requirements for such work, including, without limitation, Amtrak's requirements regarding the distance that must be maintained between any such work and any signal or communication cables.

10. If any of Amtrak's improvements, fixtures, facilities or appurtenances must be relocated due to Grantee's project, Grantee shall relocate same per Amtrak's specifications at Grantees sole cost and expense.

11. The Easement granted hereby will be under and subject to reservations, restrictions and easements of record; applicable zoning regulations and ordinances; applicable federal, state and local environmental protection laws and regulations; real property taxes and assessments for the current tax period, if any; and any conditions or state of facts that a current survey of the Easement Area would show.

DB6280 1001

EXHIBIT D

CONTRACTOR/SUBCONTRACTOR INSURANCE REQUIREMENTS

INSURANCE REQUIREMENTS
NATIONAL RAILROAD PASSENGER CORPORATION (AMTRAK)
WASHINGTON TERMINAL COMPANY (WTC)

New Jersey Transit PI No. 184A- Elizabeth Station Improvements
Revised as of May 31, 2017

DEFINITIONS

In these Insurance Requirements, "Railroad" or "Amtrak" shall mean National Railroad Passenger Corporation and, as appropriate, its subsidiary, Washington Terminal Company ("WTC"). "Contractor" shall mean the party identified as "Permittee" in the Temporary Permit to Enter Upon Property Agreement or the party with whom Amtrak has contracted in another agreement (e.g., Preliminary Engineering Agreement, Design Phase Agreement, Construction Phase Agreement or Force Account Agreement), as well as its officers, employees, agents, servants, contractors, subcontractors, or any other person acting for or by permission of Contractor. "Operations" shall mean activities of or work performed by Contractor. "Agreement" shall mean the Temporary Permit to Enter Upon Property Agreement or other such agreement, as applicable.

INSURANCE

Contractor shall procure and maintain, at its sole cost and expense, the types of insurance specified below. Contractor shall evidence such coverage by submitting to Amtrak the original Railroad Protective Liability Policy and certificates of insurance evidencing the other required insurance, prior to commencement of Operations. In addition, Contractor agrees to provide certified copies of the insurance policies for the required insurance within 30 days of Amtrak's written request. All insurance shall be procured from insurers authorized to do business in the jurisdiction(s) where the Operations are to be performed. Contractor shall require all subcontractors to carry the insurance required herein or Contractor may, at its option, provide the coverage for any or all subcontractors, provided the evidence of insurance submitted by Contractor to Amtrak so stipulates. The insurance shall provide for thirty (30) days prior written notice to Amtrak in the event coverage is substantially changed, canceled or non-renewed. All insurance shall remain in force until all Operations are satisfactorily completed (unless otherwise noted below), all Contractor personnel and equipment have been removed from Railroad property, and any work has been formally accepted. Contractor may provide for the insurance coverages with such deductibles or retained amounts as Amtrak may approve from time to time, except, however, that Contractor shall, at its sole expense, pay for all claims and damages which fall within such deductible or retained amount on the same basis as if there were full commercial insurance in force in compliance with these requirements. Contractor's failure to comply with the insurance requirements set forth herein shall constitute a violation of the Agreement.

1. **Workers' Compensation Insurance** complying with the requirements of the statutes of the jurisdiction(s) in which the Operations will be performed, covering all employees of Contractor. Employer's Liability coverage with limits of not less than **One Million ($1,000,000) Dollars** each accident or illness shall be included.

   In the event the Operations are to be performed on, over, or adjacent to navigable waterways, a U.S. Longshoremen and Harbor Workers' Compensation Act Endorsement and Outer Continental Lands Act Endorsement are required.

2. **Commercial General Liability (CGL) Insurance** covering liability of Contractor with respect to all operations to be performed and all obligations assumed by Contractor under the terms of the Agreement. Products-completed operations, independent contractors and contractual liability coverages are to be included, with the contractual exclusion related to construction/demolition activity within fifty (50) feet of the railroad deleted and no exclusions for Explosion/Collapse/ Underground (X-C-U) applicable or added.

   The policy shall name National Railroad Passenger Corporation and, as appropriate, WTC, and all commuter agencies and railroads that operate over the property or tracks at issue as additional insureds with respect to the operations to be performed. In addition, the policy shall include an ISO endorsement Form CG 24 17 10 01 or its equivalent providing contractual liability coverage for railroads listed as additional insureds. Coverage for such additional insureds shall be primary and non-contributory with respect to any other insurance the additional insureds may carry.

   Coverage under this policy shall have limits of liability of not less than **Twenty-Five Million ($25,000,000) Dollars** each occurrence, combined single limit, for bodily injury (including disease or death), personal injury and property damage (including loss of use) liability. Such coverage may be provided by a combination of a primary CGL policy and a following form excess or umbrella liability policy.

3. **Automobile Liability Insurance** covering the liability of Contractor arising out of the use of any vehicles which bear, or are required to bear, license plates according to the laws of the jurisdiction in which they are to be operated, and which are not covered under Contractor's CGL insurance. The policy shall name National Railroad Passenger Corporation and, as appropriate, WTC, and all commuter agencies and railroads that operate over the property or tracks at issue as additional insureds with respect to the operations to be performed. Coverage under this policy shall have limits of liability of not less than **Two Million ($2,000,000) Dollars** each occurrence, combined single limit, for bodily injury (including disease or death), personal injury and property damage (including loss of use) liability.

   In the event Contractor or any subcontractor will be transporting and/or disposing of any hazardous material or waste off of the jobsite, a MCS-90 Endorsement is to be added to this policy and the limits of liability are to be increased to **Five Million ($5,000,000) Dollars** each occurrence.

4. **Railroad Protective Liability (RRP) Insurance** covering the Operations performed by Contractor or any subcontractor within fifty (50) feet vertically or horizontally of railroad tracks. The current ISO Occurrence Form (claims-made forms are unacceptable) in the name of National

Railroad Passenger Corporation (and as appropriate, WTC, and all commuter agencies and railroads that operate over the property or tracks at issue) shall have limits of liability of not less than **Five Million ($5,000,000) Dollars** each occurrence, combined single limit, for Coverages A and B, for losses arising out of injury to or death of all persons, and for physical loss or damage to or destruction of property, including the loss of use thereof. A **Ten Million ($10,000,000) Dollars** annual aggregate shall apply. Additionally, Policy Endorsement CG 28 31 - Pollution Exclusion Amendment, is required to be endorsed onto the policy. Further, "Physical Damage to Property" as defined in the policy is to be deleted and replaced by the following endorsement:

"It is agreed that 'Physical Damage to Property' means direct and accidental loss of or damage to all property owned by any named insured and all property in any named insured's care, custody and control."

The original RRP Liability Insurance Policy must be submitted to Amtrak prior to commencement of Operations.

5. **All Risk Property Insurance** covering damage to or loss of all remaining personal property of Contractor, its contractors and subcontractors used during Operations including, but not limited to, tools, equipment, construction trailers and their contents and temporary scaffolding at the project site, whether owned, leased, rented or borrowed for the full replacement cost value. Insurance policies of Contractor, its contractors and subcontractors, covering tools, equipment and other personal property will include a waiver of subrogation and any other rights of recovery in favor of Amtrak and Contractor.

6. **Contractor's Pollution Liability Insurance** covering the liability of Contractor arising out of any sudden and/or non-sudden pollution or impairment of the environment, including clean-up costs and defense, that arise from the Operations of Contractor, with National Railroad Passenger Corporation and, as appropriate, WTC, and all commuter agencies and railroads that operate over the property or tracks at issue named as additional insureds. Coverage under this policy shall have limits of liability of not less than **Two Million ($2,000,000) Dollars** each occurrence. The coverage shall be maintained during the term of the project, and for at least two (2) years following Amtrak's acceptance of the completion of all Operations to be performed.

7. **Pollution Legal Liability Insurance** is required if any hazardous material or waste is to be transported or disposed of off of the jobsite. Contractor, its subcontractor or transporter, as well as the disposal site operator, shall maintain this insurance. Contractor shall designate the disposal site, and must provide a certificate of insurance from the disposal facility to Amtrak. The policy shall name National Railroad Passenger Corporation and, as appropriate, WTC, and all commuter agencies and railroads that operate over the property or tracks at issue as additional insureds, with limits of liability of not less than **Two Million ($2,000,000) Dollars** per claim.

   Further, any additional insurance coverages, permits, licenses and other forms of documentation required by the United States Department of Transportation, the Environmental Protection Agency and/or related state and local laws, rules and regulations shall be obtained by Contractor.

8. **Professional Liability Insurance** covering the liability of Contractor for any and all errors or omissions committed by Contractor in the performance of the Operations, regardless of the type

of damages. The coverage shall be maintained during the term of the Operations, and for at least three (3) years following completion thereof. The policy shall have a retroactive date that precedes any design work on the project and shall have limits of liability of not less than **Two Million ($2,000,000) Dollars** per claim and **Two Million ($2,000,000) Dollars** in the annual aggregate.

If Contractor is not performing professional design or engineering services, Contractor may elect to satisfy this requirement through the addition of endorsement CG2279 "Incidental Professional Liability" to its CGL policy.

9. **Waiver of Subrogation** As to all insurance policies required herein, Contractor waives all rights of recovery, and its insurers must waive all rights of subrogation of damages against Amtrak, NJ TRANSIT and, as appropriate, WTC, and their agents, officers, directors, and employees. The waiver must be stated on the certificate of insurance.

10. **Punitive Damages** Unless prohibited by law, no liability insurance policies required above shall contain an exclusion for punitive or exemplary damages.

11. **Claims-Made Insurance** If any liability insurance specified above shall be provided on a claims-made basis then, in addition to coverage requirements above, such policy shall provide that:

    a. The retroactive date shall coincide with or precede Contractor's start of Operations (including subsequent policies purchased as renewals or replacements);

    b. The policy shall allow for the reporting of circumstances or incidents that might give rise to future claims;

    c. Contractor will use its best efforts to maintain similar insurance under the same terms and conditions that describe each type of policy listed above (e.g., CGL, Professional Liability) for at least three (3) years following completion of the Operations; and

    d. If insurance is terminated for any reason, Contractor will purchase an extended reporting provision of at least six (6) years to report claims arising from Operations.

12. **Evidence of Insurance** Contractor shall furnish evidence of insurance as specified above at least fifteen (15) days prior to commencing Operations. Prior to the cancellation, renewal, or expiration of any insurance policy specified above, Contractor shall furnish evidence of insurance replacing the cancelled or expired policies. THESE DOCUMENTS SHALL INCLUDE A DESCRIPTION OF THE PROJECT AND THE LOCATION ALONG THE RAILROAD RIGHT-OF-WAY (typically given by milepost designation) IN ORDER TO FACILITATE PROCESSING. The fifteen (15) day advance notice of coverage may be waived by Amtrak in situations where such waiver will benefit Amtrak, but under no circumstances will Contractor

begin Operations without providing satisfactory evidence of insurance as approved by Amtrak. Such evidence of insurance coverage shall be sent to:

AFFIDAVIT OF CORPORATE AUTHORIZATION

COMMONWEALTH OF PENNSYLVANIA :
ss
COUNTY OF PHILADELPHIA :

Donald J. Stadtler says under oath:

1. Authorized Representative. I am the Executive Vice President, Chief Administration Officer of **NATIONAL RAILROAD PASSENGER CORPORATION**, a corporation organized under 49 U.S.C. §24101 *et seq.* and the laws of the District of Columbia, having its headquarters at 60 Massachusetts Avenue, N.E., Washington, D.C. 20002 ("Grantor").

2. Representations. The statements contained in this Affidavit are true to the best of my knowledge, information and belief.

3. Corporate Authority. Parcels E2H and E2I as depicted on Exhibit "A" attached hereto, in the City of Elizabeth, Union County, New Jersey are collectively called the "Property". Grantor is to convey to **NEW JERSEY TRANSIT CORPORATION**, a public transportation corporation organized under the laws of the State of New Jersey, with an address at One Penn Plaza E, 8th Floor, Newark, NJ 07105 (**"Grantee")** an easement over portions of the Property **(the "Easement").** This action is authorized pursuant to the Grantor's corporate governance documents. Grantor is qualified to transact business in New Jersey. The individual executing the Easement on behalf of Grantor is duly authorized to execute the Easement.

4. Approval by Shareholders. Shareholder approval is not required.

5. Reliance. Grantor makes this Affidavit in order to induce the Grantee to accept its Easement. It is aware that the Grantee will rely on the statements made in this Affidavit and on its truthfulness.

Re: Classification Exception Area (CEA) Lift
Site: Allied Building Supply Company
Address: 101 Elizabeth Avenue
City: Linden City
County: Union
SRP Program Interest (PI) #: 012948
CEA #: 100151187

Dear Mr. Matri and Mr. Geitner:

The New Jersey Department of Environmental Protection (Department) established a Classification Exception Area/Well Restriction Area for contamination in the ground water at this site on November 16, 1998. Ground water sampling has demonstrated that the New Jersey Ground Water Quality Standards (N.J.A.C. 7:9C-1.7) have been achieved, therefore the Department has lifted the CEA/WRA as of the date of this letter.

The Department has based this determination on information in the case file and the environmental data provided by John Q. Robinson, Jr., LSRP, in the Classification Exception Area (CEA) Biennial Certification and CEA Lift Request dated February 24, 2023.

This CEA Lift Letter combined with the Limited Restricted Use NFA removes the associated restriction at the site associated with the NFA Letter dated November 16, 1998. There is no

requirement to file a Response Action Outcome – Entire Site (RAO-E) to change the use restriction for the site. The Department will remove the mapped CEA shape from NJ-GeoWeb. Please be advised that this does not address any discharges that occurred after the date of the referenced NFA Letter or at any other area of concern (AOC). If a current Unrestricted Use RAO, for an Entire Site or AOC is desired, an appropriate evaluation (Preliminary Assessment, Site Investigation, Remedial Investigation and/or Remedial Action, as necessary) should be conducted to evaluate any potential new AOCs/site related discharges that may be present since the original Limited Restricted Use NFA Letter.

Well Decommissioning

Pursuant to N.J.S.A. 58:4A, New Jersey Transit Corporation shall properly decommission all monitoring wells installed as part of a remediation that will no longer be used for ground water monitoring. A New Jersey licensed well driller shall decommission the wells in accordance with the requirements of N.J.A.C. 7:9D-3.1 et seq. After the wells have been decommissioned by a New Jersey licensed well driller, the well driller is required to submit a copy of the decommissioning reports on your behalf to the Department's Division of Water Supply and Geoscience – Bureau of Water Allocation and Well Permitting. Please note that only a New Jersey licensed well driller may perform this work. More information about regulations regarding the maintenance and decommissioning of wells in New Jersey can be found at http://www.nj.gov/dep/watersupply/pw_permit.html. For a list of New Jersey licensed well drillers, click on the "Online Reports" link under "Well Permits and Information" and select "Well Drillers & Pump Installers". Questions on the matter can be emailed to wellpermitting@dep.nj.gov.

Thank you for your attention to these matters. If you have any questions, please contact Ms. Marty Goodwin at marty.goodwin@dep.nj.gov

Sincerely,

Lynne Mitchell, Assistant Director
Remediation Review Element

USER QUESTIONAIRE[1]

Date:	8/12/2024
Property Address:	Linden Station Lot, 101 W Elizabeth Avenue, Linden, NJ 07036
Questionnaire Completed By (Print Name):	Tom Smith
Signature:	
Relationship to the Property:	Third Party Non-Owner
Reason Phase I ESA is Being Performed:	Due Diligence Assessment

USER SUPPLIED INFORMATION

(1.) Environmental Cleanup liens that are filed or recorded against the Site (40 CFR 312.25).

Are you aware of any environmental cleanup liens against the property that are filed or recorded under federal, tribal, state or local law?

Aware of none

(2.) Activity and land use limitations that are in place at the site or that have been filed or recorded in a registry (40CFR 312.26).

Are you aware of any AULs such as engineering controls, land use restrictions or institutional controls that are in place at the site and/or have been filed or recorded in a registry under federal tribal, state or local law?

Aware of none

(3.) Specialized knowledge or experience of the person seeking to qualify for the LLP (40 CFR 312.28).

As the user of this ESA do you have any specialized knowledge or experience related to the property or nearby properties? For example, are you involved in the same line of business as the current or former occupants of the property or an adjoining property so that you would have specialized knowledge of the chemical and processes used by this type of business?

No specialized knowledge of this or neighboring/adjacent properties.

[1] In order to qualify for one of the Landowner Liability Protections (LLPs) offered by the Small Business Liability Relief and Brownfields Revitalization Act of 2001 (the "Brownfields Amendments") the User must provide the above-listed information (if available) to the environmental professional. Failure to provide this information could result in a determination that "all appropriate inquiry" is not complete.

(4.) Relationship of the purchase price to the fair market value of the property if it were not contaminated (40 CFR 312.29).

Does the purchase price being paid for this property reasonably reflect the fair market value of the property? If you conclude that there is a difference, have you considered whether the lower purchase price is because contamination is known or believed to be present at the property?

Not applicable

(5.) Commonly known or reasonable ascertainable information about the property (40 CFR 312.30).

Are you aware of commonly known or reasonably ascertainable information about the property that would help the environmental professional to identify conditions indicative of releases or threatened releases? For example as user:

(a.) Do you know the past uses of the property?

No

(b.) Do you know the specific chemicals that are present or once were present at the property?

None known

(c.) Do you know of spills or other chemical releases that have taken place at the property?

None known

(d.) Do you know of any environmental cleanups that have taken place at the property?

None known other than within the environmental records provided by NJ Transit

(6.) The degree of obviousness of the presence or likely presence of contamination at the property and the ability to detect the contamination by appropriate investigation (40 CFR 312.31).

As the user of this ESA, based on your knowledge and experience related to the property are there any obvious indicators that point to the presence of likely presence of contamination at the property?

None known

Appendix L
Qualifications of Environmental Professonals

Amanda Jagger

Project Manager

Amanda is experienced with the management oversight of projects within the Site Remediation Program (SRP). She is responsible for review and analysis of data, and compilation of information for technical reports. She has managed projects involving unregulated heating oil tank (UHOT) sites and projects under the Licensed Site Remediation Professional (LSRP) program. Amanda has extensive experience in the construction and contracting aspect of site remediation projects. She is licensed with the New Jersey Department of Environmental Protection (NJDEP) for Subsurface Evaluation and Closure.

Amanda's expertise also involves Brownfield redevelopment project and commercial and industrial property transfers. She has prepared Phase I and Phase II Environmental Site Assessments. In the regulatory arena, this work manifests in the form of a Preliminary Assessment, Site Investigation and associated reporting. She has experience in the removal and closure of UST system as well as all aspects of sample collection, remedial investigation, site remediation, NJDEP reporting and permitting.

23 years of professional experience

Education

BS, Natural Resource Management, Rutgers State University, 1999

Registrations/Certifications

New Jersey Department of Environmental Protection Licensed Subsurface Evaluator, NJ, 06/2023

New Jersey Department of Environmental Protection Underground Storage Tank Closure

OSHA 40-Hour HAZWOPER Certification; 29 CFR1910.120

OSHA 8-Hour HAZWOPER Refresher Certificate

Rutgers Project Management Professional (PMP) Certification Program 2017

Environmental Services, Former Truck Stop, Lawrence Township, NJ

Amanda managed the environmental services required to bring the remediation at this former truck stop site to regulatory closure. Activities included direct oversight requirements including preparation of the Remediation Funding Source package, Public Participation Plan, and Cost Review submittal; coordination of off-site access, public notification; remedial investigation of groundwater including monitoring well installation, survey, sampling and drummed waste disposal. Based on groundwater delineation results, a Remedial Investigation Report (RIR) will be prepared and subsequently issuance of a Response Action Outcome (RAO) for case closure.

Preliminary Assessment, Site and Remedial Investigation, Remedial Action and Case Closure, Automobile Dealership, Little Silver, NJ

Amanda provided environmental project management from the initial Preliminary Assessment (PA) (identification of nine areas of concern [AOCs]) through site remediation and case closure including examination of potential soil and groundwater contamination and submission of regulatory documentation. The final report is pending submission to the NJDEP at which time a Response Action Outcome (RAO) can be issued by the Licensed Site Remediation Professional (LSRP).

Preliminary Assessment, Site Investigation, Remedial Investigation, HDSRF Application, EPA Brownfield Grant Application, Former Rubber Factory, Hamilton Township, NJ

Amanda conducted a Preliminary (PA) of the site resulting in the identification of 22 areas of concern (AOCs). She provided technical guidance to Hamilton Township to move the project toward the needed additional investigation and remediation. In coordination with the Township, cost estimates for waste characterization and disposal, were prepared and a workplan and schedule were developed for disposal

of solid waste throughout the property, identifying contaminants of concern, sample collection frequency and location. Amanda also provided assistance in preparation and amendment of the Hazardous Discharge Site Remediation Fund (HDSRF) application and the US EPA Brownfields Grant Application.

Preliminary Assessment, Site Investigation, Remedial Investigation, Remedial Action, Remedial Investigation Workplan (RIW) Condominium Complex, Englewood, NJ

As Project Manager, Amanda oversaw the remediation activities including Preliminary Assessment (PA), Site Investigation (SI), Remedial Investigation (RI) and Remedial Action (RA) for soil and groundwater contamination for the six-story condominium complex. Remedial action of the site included soil excavation and sampling in an area subject to heavy pedestrian and vehicular traffic. Additional remedial investigation is in progress to complete the delineation of impacted soil. The RI/RA process has been exceptionally challenging due to the lithology of the site, underground and overhead utilities and traffic/safety concerns.

UST Investigation, Remedial Investigation, West New York, NJ

Amanda directed the geophysical investigation conducted at the site confirming underground storage tank (UST) location and the subsequent abandonment of the UST requested due to pending sale of the property. After removal, soil sampling and analysis confirmed extractable petroleum hydrocarbons (EPH) concentrations exceeding the NJDEP standards. Amanda is managing the required remedial investigation of soil and groundwater to determine the horizontal and vertical extent of the identified contamination.

UST Removal Oversight, Bid Specification Preparation, Sample Collection and Analysis and Closure Reporting, City Hall, City of Linden, NJ

As Project Manager, Amanda assisted the City of Linden in management of the removal and decommissioning of a 1000-gallon heating oil underground storage tank (UST) from City Hall property. She prepared the bid specifications, assisted solicitation of proposals, conducted the contractor site walk and provided technical guidance to the City of Linden in the contractor selection process by reviewing the bids received and providing recommendations based on request for proposal (RFP) established evaluation criteria. Amanda was also responsible for oversight of removal, post excavation confirmatory sampling and documentation/reporting of closure activities.

Limited Geophysical Investigation, Management and Coordination of Unregulated UST Removal and Closure, Train Station, City of Linden, NJ

Amanda was instrumental in providing oversight of the final closure activities for this site. After contractor selection, she oversaw UST decommissioning and removal activities, including the removal of product and storage of the removed product in 55-gallon drums for disposal. Upon removal, the selected contractor inspected the UST for holes, cleaned the interior, and backfilled the excavation. Amanda provided oversight of post-excavation confirmatory soil sampling, including advancement of four soil borings and laboratory analysis of same. Laboratory analysis did not report levels of extractable petroleum hydrocarbons (EPHs) above applicable standards.

No further investigation or remediation of the former UST site was recommended and the site was closed via a letter of No Further Action from the NJDEP.

Environmental SI and Remediation, Various Locations, NJ

Amanda has conducted many Phase I ESAs and PAs at the request of prospective purchasers or financial institutions. Her experience includes performing site reconnaissance, review of historic aerial and Sanborn fire insurance map, title search review, permit and license review, and searches of county, state and federal records. Her work encompasses reviewing historic site information regarding hazardous substances and assessing properties for Recognized Environmental Concerns (RECs) or AOCs. Phase II/SI work follows Phase I/PA activities with a focus on individual recognized RECs/AOCs. Amanda has experience in investigating and defining the extent of the REC or AOC identified to provide the purchaser or financer to determine if the purchase will proceed as planned. She has overseen the development of remedial scopes and the execution of RIs. She directs sampling events, coordinates with outside vendors, and keeps open communication with her clients and interested parties to successfully navigate the remedial process. Amanda works closely with the staff LSRP of Record in attaining necessary remedial goals in anticipation of RAOs. She keeps abreast of technical changes and regulatory revisions, ensuring an effective management of projects

UST Closure, Remedial Investigation and Site Remediation including Structural Foundation Support, Rumson, NJ

Amanda took over as Project Manager upon completion of the RI and oversaw site remediation including approximately 2,200 ton of impacted soil, onsite treatment and permitted discharge of over 3 million gallon of groundwater and an overall project budget exceeding 1.5 million dollars. Post-remedial soil and groundwater sampling confirmed the efficacy of site remediation activities and the site was closed by letter of No Further Action in December 2022.

ISRA property, Preliminary Assessment, Site Investigation and Reporting, Toms River, NJ

Amanda oversaw the project from the Preliminary Assessment identifying 13 AOCs, coordinating site investigation as needed and NJDEP reporting. The site will be closed via Response Action Outcome (RAO) upon finalization of the Site Investigation Report.

Amber Satterly, LSRP

Senior Project Manager

Education

BS, Environmental Science, Stockton College of New Jersey, 2003

Registrations

NJDEP Licensed Site Remediation Professional No. 837802

40-Hour OSHA Certification, 29 CFR 1910.120, 1999; 8-Hour OSHA Refresher (annually)

Subsurface Evaluation and Closure—NJDEP License No. 0257369

Affiliations/ Memberships

Licensed Site Remediation Professional Association (LSRPA)

Society of Women Environmental Professionals (SWEP)

Continuing Professional Education

Regulatory Training in Underground Storage Tanks—Rutgers University

Site Remediation Basics—Rutgers University

Environmental Law and Regulation—Rutgers University

Amber is a Senior Project Manager and New Jersey Department of Environmental Protection (NJDEP) Licensed Site Remediation Professional (LSRP). Her expertise includes planning and performing Preliminary Assessments (PAs), Phase I Environmental Site Assessments (ESAs), Phase II site investigations (SIs), Remedial Investigations (RIs), and developing Remedial Action Workplans (RAWs). She oversees UST removals and closures, soil and groundwater sampling, monitoring well installation, soil boring programs, and preparation of reports. Responsibilities also include oversight of subcontractors and project team staff; scope design and cost preparation for investigations; and coordination and interaction with clients, regulatory agencies and the public. She has proven proficiency with technical writing and has worked with a variety of clients, both public and private.

19 Years Experience

Phase I ESAs/PAs

Amber has conducted hundreds of Phase I ESAs and PAs in support of decision making and obtaining financing for future development. Her experience includes performing site reconnaissance; review of historic aerial photographs; Sanborn fire insurance maps; title search review; permit and license review; and searches of county, state and federal records. Her work encompasses reviewing historic site information regarding hazardous substances and assessing properties for recognized environmental concerns (RECs) or areas of concern (AOCs).

Phase I ESA and Asbestos Investigation, Jeffrey's Creek Property, Ocean Gate Borough, Ocean County, NJ

Amber directed the staff in performance of a Phase I ESA for the Ocean County Planning Board in preparation for acquisition. The assessment and geophysical investigation identified an area on-site mapped as containing historic fill which would need to be managed according to NJDEP requirements. In addition, a septic system and irrigation well were identified which VHB recommeded be decommissioned. Amber oversaw the site reconnaissance and reviewed final Phase I ESA report.

Phase I ESA, Phase II SI, Middletown, Monmouth County, NJ

Amber directed the Phase I ESA and Phase II SI conducted for the Township of Middletown at the property located on Hubbard Avenue. The Phase I assessment revealed an underground storage tank (UST) had been removed; however, information regarding soil conditions in the excavation and integrity of the tank were unknown. The site was also mapped has having historic fill. Based on the Phase I ESA, VHB performed the follow on SI to investigate the identified RECs. The SI involved soil sample collection, laboratory analysis and data interpretation of results.

Site Remediation Reform Act and LSRP Program—Rutgers University

Brownfields: Emerging Issues in Redevelopment—Rutgers University

Phase I ESA, Geophysical Investigation and Limited Hazardous Materials Investigation, Bradley Beach, Monmouth County, NJ

Amber oversaw the site reconnaissance and preparation of the final Phase I ESA report for the property located on LaReine Avenue for the Borough of Bradley Beach. The site consisted of a former church building. VHB recommended a Phase II investigation for former heating sources (USTs) be conducted. In addition, a 275-gallon aboveground storage tank was observed on-site and was recommended to be properly decommissioned. A hazardous materials inspection was conducted for the site buildings identifying asbestos-containimg materials which if disturbed in redevelopment would need to follow proper management regulations. A geophysical investigation was also conducted. Amber directed all activities performed for this project.

PA and SI, Crosswicks Hamilton Square Road, Hamilton Township, Mercer County, NJ

As senior project manager, Amber directed the PA and SI activities conducted at the farmstead site and reviewed all final reporting. The PA identified seven AOCs; three AOCs required further investigation. VHB performed a soil investigation to examine potential impact from historic agricultural use of pesticides. The investigation findings indicated no impact had been established and no further investigation was required. VHB also provided a supplemental SI for two AOCs for potential UST and surface water body for compliance with Green Acres regulations.

Remedial Investigation, Monmouth University, West Long Branch, Monmouth County, NJ

The environmental work performed at Monmouth University included RI oversight and documentation of RI activities. Amber assisted in the preparation of the LSRP Notification of Retention for submission to the NJDEP and completing the RI and a RAW to address contaminated soil and groundwater associated with a former heating oil UST. Vapor intrusion testing was performed in the gym structure to confirm there was not a health risk. Amber summarized the work completed by others and provided cost estimates. She developed a Scope of Work to support case closure in preparation of issuance of a response action outcome.

LSRP Services, Remedial Investigation, Proposed Elizabeth Elementary School, Elizabeth, Union County, NJ

Amber assisted the LSRP and was responsible for the environmental assessment, investigation, and remediation activities. She provided technical oversight of soil and groundwater investigations, and development of a RAW in accordance with the NJDEP Technical Requirements, and the Department of Community Affairs. Amber worked with members of the project team, the school district, and subcontractors to complete remedial goals and document remediation work performed to facilitate new construction of an elementary school building.

Sergio Rojas, LSRP

Director of Site Investigation & Remediation

Education

BS, Environmental Science, Cook College, Rutgers University, 1994

Registrations/Certifications

Licensed Site Remediation Professional, NJ, 06/2025

Secure Worker Access Consortium, Port Authority of New York and New Jersey

OSHA 40-Hour HAZWOPER Certification; 29 CFR1910.120

OSHA 8-Hour HAZWOPER Refresher Certificate, 03/2024

OSHA Confined Space Entry Training

Sergio is a New Jersey Department of Environmental Protection (NJDEP) Licensed Site Remediation Professional (LSRP) and a Senior Project Manager. He has extensive experience managing construction monitoring projects involving linear construction (LC), hazardous waste characterization and disposal, preliminary assessments (PAs) and site investigations (SI), remedial investigations (RI), feasibility studies, underground storage tank (UST) decommissioning, asbestos and lead-based paint (LBP) surveys, and remedial actions involving systems design and installation. He has managed several large-scale brownfield redevelopment projects and industrial facility polychlorinated biphenyl (PCB) contamination requiring coordination with state and federal regulations, and development and implementation of PCB Self-Implemented Cleanup Plans with the USEPA. He has managed complex remedial projects with technical impracticability issues by involving specialists and NJDEP personnel in workable solutions to site cleanups.

29 years of professional experience

LSRP Services, RI and RAW, Borinqueneers Park, City of Perth Amboy, Middlesex County, NJ

Sergio provided project management and oversight for Middlesex County and the City of Perth Amboy to conduct Licensed Site Remediation Professional (LSRP) services, Remedial Investigation (RI), and preparation of a Remedial Action Workplan (RAW) for the former scrap metal facility site. Sergio directed a team of professionals, performing investigations of polychlorinated biphenyls (PCB)-contaminated soil and concrete, and conducting waste classification. VHB confirmed site-wide historic fill and identified PCB "hot spot" areas. A United States Environmental Protection Agency (USEPA) Self-Implemented Cleanup Plan, including excavation, consolidation, and off-site disposal of PCBs was developed and approved. The RAW and Self-Implemented Cleanup Plan implemented has commenced and the six-acre property is currently in the final design stage of development as a recreational waterfront park which will serve as the engineering control of a cap. Sergio assisted the City with securing funding through various sources while successfully navigating regulatory compliance for the site with the NJDEP and USEPA.

Merck Sharp & Dohme Co., Multiple Projects, Summit, Rahway and Kenilworth, NJ

Under NJDEP and Resource Conservation and Recovery Act (RCRA) compliance, Sergio managed all aspects of building material characterization, recycling, and/or disposal associated with demolition of more than a million sq. ft. of pharmaceutical research and development and manufacturing facilities. He oversaw third-party contractors and project teams performing field inspections. He coordinated sample analysis with certified laboratories, interpreted data, and prepared specifications for site cleanup, including several Self-Implemented Cleanup Plans under USEPA approval for PCB remediation.

Liberty Harbor North, Jersey City, NJ
Sergio provided technical oversight and management of the environmental assessment, regulatory compliance, LSRP and RA requirements for a large redevelopment project area covering 60 acres in Jersey City. The site was formerly used for rail yards, industrial manufacturing, landfills, and mixed with housing, schools and other commercial establishments. He evaluated the project site for redevelopment of housing, childcare facilities and medical buildings in six phases and developed RAWs according to NJDEP technical guidance and regulations, as well as several Self-Implemented Cleanup Plans under USEPA approval for remediation of PCB "hot spots".

Brookdale Community College, Wall Higher Education Center (Former Camp Evans, Fort Monmouth), Wall, NJ
Sergio directed pre-demolition building assessments and hazardous materials sampling; bid specification analysis and evaluation, demolition oversight and reporting, health and safety, assessment of hazardous building materials for safe and legal off-site disposal, and asbestos-containing materials (ACMs), lead-based paint (LBP), PCBs, and mercury. Upon removal of more than 30 site structures, lead-contaminated soil was confirmed and was addressed under the NJDEP Licensed Site Remediation Program (LSRP) program.

Port Authority NYNJ, Environmental Risks, World Trade Center Site, NY
Sergio oversaw the environmental aspects of professional integrity monitoring services for the Vehicle Security Center, parking facility, and roadway projects at the former World Trade Center (WTC) and identified potential environmental risks associated with the project on this 26-acre site. He was required to maintain security clearances and report to high level government officials throughout project completion.

Demolition Oversight and Integrity Monitoring
Sergio has directed many construction monitoring projects involving site characterization of hazardous materials, design of pre-demolition remedial plans, preparation of bid specifications, contractor selection, and assistance with the contractor selection process. Following contract award, Sergio and his group provide oversight for the site health and safety requirements, demolition work, materials management and off-site disposal and/or onsite reuse, and technical reporting on solid waste and site remediation issues.

Preliminary Assessments, Site Investigation, Remedial Investigations, and Remedial Actions
Sergio manages RAs for large-scale public and private site remediation projects throughout New Jersey involving in-situ remediation, soil excavation, onsite treatment, and off-site removal for public, commercial, and industrial facilities. He has also designed groundwater and soil treatment alternatives including biological treatments, vapor extraction systems, nutrient addition, and chemical oxidation.
